

Project Title	File # 2015-7400 Sunnyvale Office Park Project
Lead Agency Name and Address	City of Sunnyvale P.O. Box 3707, Sunnyvale, CA 94088-3707
Contact Person	Margaret Netto, Project Planner
Phone Number	408-730-7628
Project Location	1184 Mathilda Avenue (APN # 110-25-042, 110-25-49, 110-25-54, 110-25-55)
Applicant's Name	Commonwealth Partners
Project Address	1184 Mathilda Avenue Sunnyvale, CA 94088
Zoning	MP-TOD
General Plan	M-Industrial
Other Public Agencies whose approval is required	None

BRIEF PROJECT DESCRIPTION

The proposed project includes the following related applications on a 19.31 acre project site consisting of four parcels (841,342 square feet).

Major Moffett Park Specific Plan Special Development Permit to allow the construction of a new building within an office park with five stories of office/research development over three stories of roof parking and one level of underground parking, totaling 248,259 square feet.

Design Review Permit for site and architectural consideration on the new construction.

DETAILED PROJECT DESCRIPTION:

Surrounding Uses and Setting: The project site is located on the west side of Mathilda Avenue, approximately ¼ mile north of the intersection of Highways 101 and 237 across from the Moffett Park VTA light rail station. The office park has three existing buildings (1184, 1194 and 1220 Mathilda Avenue) with surface parking. The existing buildings are all four-stories totaling 424,815 square feet. The project site is an existing surface parking lot located behind the office building at 1184 Mathilda Avenue. Access to the project site is via two existing driveways on north Mathilda Avenue, and two reconfigured driveways from Fifth Avenue with internal circulation throughout the office park. One of the driveways on 5th Avenue will provide access to the building's subterranean and three story parking structure with additional roof top parking.

On-site Development: The 19.31-acre project site consists of four parcels currently occupied by three existing office buildings and associated parking lots and is surrounded by commercial development. The three existing office buildings will remain, and the project will construct a new 248,259 square foot, five story office building over three stories of parking with additional rooftop and basement parking and reconfiguration of the surface parking lots within the office campus. The project includes office, research

and development and amenities (café, cafeteria and fitness center). Open landscaped and patio areas at the ground level and upper level of the project are also included.

The project will demolish the existing surface parking lot and improvements.

The project includes sidewalks surrounding the office building, with connections to the existing sidewalks on 5th Avenue (private street). The sidewalks on the project site provide pedestrian connection to the main office entrance. Pedestrian access to the office underground parking garage would be provided by a centrally located elevator and two staircases, one on either side of the garage.

Visitors would access the office from the main lobby located mid-way between the site frontage on the west side of the office. The lobby level contains the office and garage elevator and one level of parking.

Construction Activities and Schedule: Construction activities include full demolition of the existing parking on the project site and construction of a new 248,259 square foot, five story office building with associated on-site and off-site improvements and underground garage. The project will be subject to the Sunnyvale Municipal Code requirements for construction noise and hours of construction contained in Chapter 16.08.030.

Construction is estimated to span 12 months, which is typical for a project of this size. Demolition is likely to commence in fall, 2016. The remaining time will include construction of buildings, excavation for an underground parking garage, on-site improvements and off-site improvements. Construction would not include deep pile foundations or pile driving or jack hammers.

Off-site Improvements: The existing curb cut and driveway will be upgraded to comply with current standards. The existing sidewalk and street trees, and street lights will be installed in the public right-of-way per standard specifications. Standard water, sewer, right-of-way and utility upgrades will be provided as required by the Municipal Code.

EVALUATION OF ENVIRONMENTAL IMPACTS:

1. A brief explanation is required for all answers except “No Impact” answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A “No Impact” answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g. the project falls outside a fault rupture zone). A “No Impact” answer should be explained where it is based on project-specific factors as well as general standards (e.g. the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).
2. All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.
3. Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. “Potentially Significant Impact” is appropriate if there is substantial evidence that an effect may be significant. If there are one or more “Potentially Significant Impact” entries when the determination is made, an EIR is required.
4. “Negative Declaration: Potentially Significant Unless Mitigation Incorporated” applies where the incorporation of mitigation measures has reduced an effect from “Potentially Significant Impact” to a “Less Significant Impact.” The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level (mitigation measures from Section 17, “Earlier Analysis,” may be cross-referenced).
5. Earlier analysis may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. Section 15063 (c) (3) (d). In this case, a brief discussion should identify the following:
6. Earlier Analysis Used. Identify and state where they are available for review.
7. Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
8. Mitigation Measures. For effects that are “Less than Significant with Mitigation Measures Incorporated,” describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project
9. Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g. general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED:

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

- | | | |
|---|--|---|
| ☐ Aesthetics | ☐ Hazards & Hazardous Materials | ☐ Public Services |
| ☐ Agricultural Resources | ☐ Hydrology/Water Quality | ☐ Recreation |
| ☐ Air Quality | ☐ Land Use/Planning | ☐ Transportation/Traffic |
| ☐ Biological Resources | ☐ Mineral Resources | ☐ Utilities/Service Systems |
| ☐ Cultural Resources | ☐ Noise | ☐ Mandatory Findings of Significance |
| ☐ Geology/Soils | ☐ Population/Housing | |

MANDATORY FINDINGS OF SIGNIFICANCE (see checklist for further information):

Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?

☐ Yes
☒ No

Mandatory Findings of Significance? Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of the past projects, the effects of other current projects, and the effects of probable future projects)?

☐ Yes
☒ No

Mandatory Findings of Significance? Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?

☐ Yes
☒ No

DETERMINATION:

On the basis of this initial evaluation:

I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared. ☐

I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared. ☒

I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required. ☐

I find that the proposed project MAY have a "potential significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect (1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and (2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed. ☐

I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required. ☐

1, 2, 3. Aesthetics (Less than Significant) - The project includes construction of a new 248,259 square foot, five story office building to replace existing surface parking. The height of the office would be 130' to the top of the photovoltaic panels. New street trees will be planted. The project would be comprehensively landscaped as required by the Zoning Ordinance (Title 17 of the Sunnyvale Municipal Code). The new landscaping and increased height of the building would not completely block the existing view from the adjacent and surrounding properties. The project is located behind the office building at 1194 Mathilda. The project would change but not degrade the visual character or quality of the site and its surrounding properties. The project would not damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings with a state scenic highway. The City does not have protected view sheds. The architectural design, massing/scale, and layout are in general conformance with the adopted design guidelines.

The project is located in an urban setting, the proposed office would create increased source of light and glare that could adversely affect daytime and nighttime views in the area. Permanent features such as windows and building surfaces would introduce new sources of glare, affecting daytime views. Building materials have the potential to be reflective. The project would likely include accent lighting at the entrances to the office, street lighting and pedestrian lighting. Pedestrian scale lighting fixtures and parking lot lights would likely be mounted on poles and bollard lights would be installed in the parking area. Although lighting fixtures are currently present at the project site, the project would increase the amount of ambient light radiating into the night sky from the project. These light sources would not have a significant impact on the night sky, as they would only incrementally add to the existing background light levels already present as a result of the surrounding street lighting and urban development. Because of the existing relatively high ambient lighting levels in the vicinity of the project site, project development would not substantially alter this condition. With required adherence to the Citywide Design Guidelines, impacts would be less than significant.

The project would be subject to the City's development approval process prior to submittal of construction drawings. This review and approval process includes a Planning Commission public hearing to receive approval on the design. The review would ensure that the proposed design, construction materials, and lighting would not adversely affect the visual quality of the area or create a substantial new source of light or glare. A final lighting plan will be reviewed to assure lighting is directed downward and would not spill over to the adjacent properties or otherwise be highly visible. As a result, the impacts are expected to be less than significant.

8. Land Use Planning Conflict (Less than Significant) and 9. Transportation and Traffic-Parking (Less Than Significant)– A minimum of 2,212 total parking spaces (3.3 spaces per 1,000 square feet) are required per Sunnyvale Municipal Code (SMC) Section 19.46. The project does comply with the parking requirement, providing 2,212 parking spaces.

The project is estimated to generate 1,791 new daily trips, of which 270 would be generated during the AM peak hour (233 in, 47 out) and 237 will be generated during the PM peak hour (36 in, 201 out). A Traffic Impact Analysis was prepared by Hatch Mott MacDonald dated November 11, 2015. The study is available for review at the City of Sunnyvale's Community Development Department, Monday through Friday between 8 a.m. and 5 p.m. Based on the City's and VTA criteria, the project is expected to have a significant impact at the following intersections under Background Plus Project traffic conditions:

- Mathilda Avenue and Moffett Park Drive
- Bordeaux Drive and Moffett Park Drive

Payment of the City's TIF would represent the project's fare share contribution to the improvements at these locations. Therefore, the improvements would reduce the project's impacts to less-than-significant level.

The proposed project is also expected to have a significant impact at the following intersections under Cumulative Plus Project traffic conditions:

- Mathilda Avenue and Moffett Park Drive
- Bordeaux Drive and Moffett Park Drive

Payment of the City's TIF would represent the project's fare share contribution to the improvements at these locations. Therefore, mitigation should be incorporated into the project to reduce the impact to less than significant.

MITIGATIONS-Traffic

WHAT: Prior to occupancy, the project applicant shall, to the satisfaction of the Public Works Director, provide evidence that a fair share payment has been made to the City of Sunnyvale for intersection improvements via payment of the City's Traffic Impact Fee (TIF):

The following intersections require fair share payment under the Background Plus Project and Cumulative Plus Project traffic conditions:

- Mathilda Avenue and Moffett Park Drive
- Bordeaux Drive and Moffett Park Drive

WHEN: The mitigation shall be incorporated into conditions of approval for the Special Development Permit prior to its final approval by the City's Planning Commission. The condition will become valid when the Permit is approved and prior to building permit issuance.

WHO: The property owner is responsible for completing the mitigation measure.

HOW: Payment of the TIF fee.

14-16. Noise (Less than Significant with Mitigation)-A noise study was prepared by Charles Salter Associates, Inc dated August 13, 2015. The study is available for review at the City of Sunnyvale's Community Development Department, Monday through Friday between 8 a.m. and 5 p.m. Noise measurements were conducted, the study evaluated existing and future noise conditions in order to determine interior noise, exterior noise, and ground borne vibration impacts to future tenants of the development, as well as short-term construction-related impacts to the surrounding tenants. The study noted that the existing noise environment is primarily due to traffic sources along Mathilda Avenue and 5th Avenue, distant traffic from US-101 and CA-237, occasional aircraft flyovers, and general parking lot noise.

Exterior Noise: The Municipal Code specifies a limit of 75 dB DNL (Day-Night Level, or cumulative noise exposures occurring over a 24-hour day) for operational noise measures at any point on the property line of the premises upon which the noise is generated or produced. Additionally operational noise levels shall not exceed 50 dBA during nighttime or 60 dBA during daytime hours at any point adjacent to residentially zoned properties. The project site is not located near a residential neighborhood. The study found exterior noise levels to range under cumulative plus project conditions between 59-64 dB DNL. Therefore, the exterior noise exposures would be in compliance with the Safety and Noise Chapter of the Sunnyvale General Plan standards and mitigation is not required.

Interior Noise: The California Code of Regulations, administered during the building permit process, limits interior noise levels to 45 dB DNL with doors and windows closed. The project would include mechanical ventilation that would ensure that windows could remain closed. At the location of the future building, both the estimated DNL and hourly (Leq (h)) are 65 db or below. Therefore interior noise impacts would be considered less than significant.

Ground Borne Vibration: Sunnyvale does not currently have standards or limits for vibration for office uses. The noise study used the criteria established by the Federal Transit Administration (FTA). The FTA recommends a limit of 72 VdB (decibels of vibration). Small vibratory rollers produce ground borne vibration levels ranging up to approximately 80 VdB at 25 feet from operating equipment. These vibration levels are in excess of what would be considered the threshold of human perception without instruments. Therefore, mitigation should be incorporated into the project to reduce the impact to less than significant.

MITIGATIONS-Ground-borne Vibration Related Noise

WHAT: Prior to issuance of a demolition, grading or building permit, the project applicant shall submit a demolition/construction plan for review and approval that would provide means to avoid unduly impact sensitive receptors from ground borne vibration from the operation of heavy construction equipment. Receiving land uses within 20 feet of the project construction limits shall be indicated on the demolition/construction plan. Viable means of vibration reduction may include but are not limited to restrictions on the type of equipment that may operate within 25 feet of the property line and digging a trench along the property line that would interrupt the ground borne vibration wave to off-site receptors. The applicant shall submit an engineering report and demolition/construction plan and means of compliance with the engineering recommendations to the city for review and approval.

WHEN: The mitigation shall be incorporated into conditions of approval for the Special Development Permit prior to its final approval by the City's Planning Commission. The condition will become valid when the Permit is approved and prior to building permit issuance.

WHO: The property owner is responsible for completing the mitigation measure.

HOW: Prior to issuance of a demolition, grading or building permit, the project applicant shall submit a demolition/construction plan for review and approval.

Construction Noise Impacts: SMC Section 16.08.030 places restrictions on time of construction to minimize nuisance to neighboring properties but does not include noise limits generated by construction. The noise study found typical construction and demolition-related activities and equipment noise to range from 17 to 40dBA at a 75 foot distance from the source. The vibration levels might occasionally be perceptible to human occupants. The following mitigation has been included to reduce the potential impact to less than significant level.

MITIGATIONS-Construction Related Noise

WHAT:

- 1) Construction and demolition shall be restricted to between the hours of 7:00 am and 6:00 pm on weekdays, and between the hours of 8:00 am and 5:00 pm on Saturdays. No such work will be permitted on Sundays or holidays.
- 2) The construction contractor shall prohibit unnecessary idling of internal combustion engines.
- 3) The construction contractor shall place all stationary construction equipment so that the emitted noise is directed away from sensitive noise receptors nearest the project site.
- 4) The construction contractor shall, to the maximum extent practical, locate on-site equipment staging areas so as to maximize the distance between construction related noise sources and noise-sensitive receptors nearest the project site during all project construction.
- 5) The construction contractor shall ensure that all construction equipment have appropriate sound muffling devices, which are properly maintained and used at all times such equipment is in operation.
- 6) Construction operations must comply with the limits of the City of Sunnyvale Municipal Code.
- 7) Keep mobile equipment (haul trucks, concrete trucks, etc.) off of local street as much as possible.
- 8) Orient the concrete crusher so that the hopper (noise end) faces away from the noise sensitive receptors.
- 9) Use scrapers as much as possible for earth removal, rather than the noisier loaders and hauling trucks.
- 10) Use a motor grader rather than a bulldozer for final grading.
- 11) Power saws should be shielded or enclosed where practical to decrease noise emissions. Nail guns should be used where possible as they are less noisy than hammering.
- 12) Use generators and compressors that are housed in acoustical enclosures rather than weather enclosures or none at all.

WHEN: The mitigation shall be incorporated into conditions of approval for the Use Permit prior to its final approval by the City's Planning Commission. The condition will become valid when the Permit is approved and prior to building permit issuance.

WHO: The property owner is responsible for completing the mitigation measure.

HOW: The conditions of approval will require these mitigations to be incorporated into the construction plans.

20. Biological Resources Trees (Less than Significant) - An arborist report was prepared by Michael Young, dated September 16, 2015. A total of 171 trees were surveyed, most of which are Shamel Ash, London Plane, California Pepper, and Kawakami pear. The following table summarizes the disposition.

Table 1- On-Site Tree Summary

	Removed	Saved
Non-protected trees	86 due to grading and site development	27
Protected	29 due to grading and site development	29
Total	115	56

There are 58 trees located on-site that are considered "protected" under SMC Section 19.94. A protected tree is defined as having a trunk size of at least 38 inches in circumference, as measured 4.5 feet from the ground. 2 protected trees are proposed to be removed. The trees to be removed are within the limits of on-site improvements. For every protected tree removed, over 24" in diameter one 48" box or two 36" box or 4 24" box trees will be added to the site. The project is consistent with the typical tree replacements requirement and SMC Section 19.94. Therefore, impacts are less than significant.

23. Historic and Cultural Resources (Less than Significant with Mitigation)- The project site has been previously graded and developed with landscaping, access driveways, and parking and loading areas. The proposed project

includes grading and land disturbance for the new building and underground parking garage. A records search by the California Historical Resources Information System/Northwest Information Center of Sonoma State University (CHIS/NWIC) was conducted for the project area dated July 13, 2015. Records indicate that there have been no cultural resource studies of the 1184 Mathilda Avenue project area. This project area contains no recorded archeological resources. The CHRIS letter recommended no further study at this time.

Although there are not recorded archeological sites in the immediate area of the project site, there still remains the possibility of discovery of Native American artifacts and remains during grading and excavation since there are archeological sites in the greater vicinity. In the event of discovery, project grading could result in potential disturbance of subsurface cultural resources, which would result in a significant impact unless mitigated. There are no surface historic resources currently known on the project site. Although the discovery of cultural resources on this site is not anticipated, the following mitigation measure has been included in the project to reduce the potential impacts to a less than significant level.

Cultural Resources Mitigation

WHAT:

- 1) If a significant archeological resource is identified during grading or construction, the City and project proponent shall seek to avoid damaging effects to the resource. Preservation in place to maintain relationship between the artifact(s) and the archeological context is the preferred manner of mitigating impacts to an archeological site. Preservation may be accomplished by:
 - Planning construction to avoid the archeological site.
 - Incorporating the site within a green space; or other open space element;
 - Covering the site with a layer of chemically stable soil; or
 - Deeding the site into a permanent conservation easement.
- 3) When in place mitigation is determined by the City to be infeasible, a data recovery plan, which makes provisions for adequate recovery of the scientifically consequential information about the site, shall be prepared and adopted prior to any additional excavation being undertaken. Such studies must be submitted to the California Historical Resources Information Center. If Native American artifacts are indicated, the studies must also be submitted to the Native American Heritage Commission. Identified cultural resources shall be recorded on form DPR 422 (archeological sites). Mitigation measures recommended by these two groups and required by the City shall be undertaken, if necessary, prior to resumption of construction activities. A data recovery plan and data recovery shall not be required if the City determines that testing or studies already completed have adequately recovered the necessary data, provided that the data have already been documented in another EIR or are available for review at the California Historical Resource Information Center [CEQA Guidelines section 15126.4(b)].

Provide documentation that construction staff has been informed of the following requirement by a qualified archaeologist. In the event that subsurface cultural resources are otherwise encountered during approved ground disturbing activities for a project area construction activity, work in the immediate vicinity shall be temporally halted in the vicinity of the discovered materials and workers shall avoid altering the materials and their context until a qualified professional archeologist has evaluated the situation and provided appropriate recommendations. Project personnel should not collect cultural resources. Native American resources include chert or obsidian flakes, projectile points, mortars, and pestles; and dark friable soil containing shell and bone dietary debris, heat affected rock, or human burials. Historic-period resources include stone or adobe foundations or walls; structures and remains with square nails; and refuse deposits or bottle dumps, often located in old wells privies.

If human remains are found, special rules set forth in State Health and Safety Code section 7050.5 and CEQA Guidelines section 15126.49(b) shall apply.

WHEN: These mitigation measures shall be converted into conditions of approval prior to the final approval by the Planning Commission. The conditions will become valid when the entitlement is approved. Conditions will be applicable during the grading and construction of the project.

WHO: The property owner is responsible for completing the mitigation measure.

HOW: The conditions of approval require these mitigations measures to be incorporated into the grading and construction plans.

27. Air Quality-Greenhouse Gas (No Impact) – A “Climate Action Plan CEQA Checklist” was completed for the project, which provides further analysis related to project greenhouse gas emissions. The Checklist demonstrates conformance with the City’s adopted Climate Action Plan; therefore, the project is not expected to have an impact on greenhouse gas emissions.

Further Discussion if “Less Than Significant” with or without mitigation: **None required.**

DRAFT

Transportation	Potentially Significant Impact	Less than Sig. With Mitigation	Less Than Significant	No Impact	Source Other Than Project Description and Plans
35. Exceeds the capacity of the existing circulation system, based on an applicable measure of effectiveness (as designated in a general plan policy, ordinance, etc.), taking into account all modes of transportation including nonmotorized travel and all relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian walkways, bicycle paths, and mass transit?	☐	☒	☐	☐	Land Use and Transportation Chapter 3 of the Sunnyvale General Plan www.sunnyvaleplanning.com Santa Clara Valley Transportation Authority Congestion Management Program http://www.vta.org/cmp/ Traffic Impact Analysis for the project prepared by Hexagon dated December 22, 2014.

Building	Potentially Significant Impact	Less than Sig. With Mitigation	Less Than Significant	No Impact	Source Other Than Project Description and Plans
43. Hydrology and Water Quality - Place housing within a 100-year floodplain, as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?	☐	☐	☐	☒	FEMA Flood Insurance Rate Map Effective 5/18/09 www.sunnyvaleplanning.com , California Building Code, Title 16 (Building) of the Sunnyvale Municipal Code
44. Hydrology and Water Quality - Place within a 100-year flood hazard area structures which would impede or redirect flood flows?	☐	☐	☐	☒	FEMA Flood Insurance Rate Map Effective 5/18/09 www.sunnyvaleplanning.com , California Building Code, Title 16 (Building) of the Sunnyvale Municipal Code
45. Hydrology and Water Quality - Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?	☐	☐	☐	☒	1995 ABAG Dam Inundation Map www.abag.ca.gov , California Building Code, Title 16 (Building) of the Sunnyvale Municipal Code
46. Geology and Soils -Result in substantial soil erosion or the loss of topsoil?	☐	☐	☒	☐	Sunnyvale Municipal Code 12.60, Storm Water Quality Best Sunnyvale Management Practices Guideline Manual Preliminary Geotechnical Report by Salem Engineering Group dated August 19, 2014
47. Geology and Soils -Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	☐	☐	☒	☐	Safety and Noise Chapter of the Sunnyvale General Plan, www.sunnyvaleplanning.com California Plumbing, Mechanical, and Electrical Codes and Title 16 (Building) of the Sunnyvale Municipal Code Preliminary Geotechnical Report by Salem Engineering Group dated August 19, 2014.
48. Geology and Soils -Be located on expansive soil, as defined by the current building code, creating substantial risks to life or property?	☐	☐	☒	☐	California Plumbing, Mechanical, and Electrical Codes and Title 16 (Building) of the Sunnyvale Municipal Code Preliminary Geotechnical Report by Salem Engineering Group dated August 19, 2014.

Further Discussion if "Less than Significant" with or without mitigation: None required.

Further Discussion: The California Building Code contains a series of building code requirements to address safety issues regarding seismic shaking, flooding, and soil types. In addition, Title 16.62 of the Sunnyvale Municipal Code requires a series of measures for provisions to reduce flood-related hazards to buildings. These standards are suggested by the Federal Emergency Management Agency and required by code by the City of Sunnyvale. These standards must be met for a building permit to be issued. Therefore, no impacts are anticipated.

46-48. Geology and Soils (Less than Significant) – A Preliminary Geotechnical Report was prepared by Langen Treadwell Rollo, dated July 14, 2015. The study concluded the project is feasible provided the Langen Treadwell Rollo geotechnical report recommends be implemented in the project design. The site is not located within an Earthquake fault zone and therefore, the fault rupture is low. The site is also has a low potential for liquefaction and lateral spreading. The site is located approximately 2.5 miles inland from the San Francisco Bay shoreline, and is approximately 27 to 28 above mean sea level. Therefore, the potential for inundation due to tsunami or seiche is considered low. Through implementation of the Building Code and recommendations from the geotechnical report, standard procedures for structural analysis and confirmation during the building permit process; impacts will be considered less than significant.
