Ancillary work includes: environmental document (CEQA Exemption) review, construction cost estimating, schedule monitoring, preparation of reports and recommendations, and project management.

II. Project Information

A. Description

This project will refurbish one existing five-million-gallon potable water tank by removing the existing deteriorated interior tank coatings and replacement with new American Water Works Association (AWWA) approved coatings for potable water tanks. All interior appurtenances (outlet pipe, ladder, support columns, etc.) will also need to be recoated.

Consultant will also perform interior examination to determine if any interior structural components, to the tank, will need repair or replacement as part of this project.

B. Location

The project is located at the Mary-Carson water plant grounds, at 155 South Mary Avenue. The surrounding area is primarily residential, except for the westerly boundary, which abuts Vargas Elementary School. Access to the site is primarily via driveway South Mary Avenue, second access is via the terminus of Carson Court. There are currently two five million-gallon potable water tanks. This project will repair the south tank.

C. Existing Conditions

The existing south five million-gallon steel water tank was constructed in 1971 (information varies). The tank stores potable water coming in via 16" pipe from the Hetch Hetchy/SFPUC system.

The tank is approximately 160 feet in diameter and 35 feet in height. The reservoir wall was constructed of four cylindrical courses of steel plates which have been welded together. Roof and bottom plates are comprised of welded rectangular steel sheeting. The tank rests on a concrete ring girder. Tank interior is currently coated with coal tar.
