Subject: Phase I Environmental Site Assessment
845 Stewart Drive
845 Stewart Drive
Sunnyvale, California 94085
Partner Project No. 24-466341.1

Dear Mr. Foster:

Partner Engineering and Science, Inc. (Partner) is pleased to provide this Phase I Environmental Site Assessment (Phase I ESA) report of the abovementioned address (the "subject property"). This assessment was performed in conformance with the scope and limitations as detailed in the ASTM Practice E1527-21 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process and Client Agreement.

This assessment included a site reconnaissance as well as research and interviews with representatives of the public, property ownership, site manager, and regulatory agencies. An assessment was made, conclusions stated, and recommendations outlined.

We appreciate your trust in Partner and the opportunity to provide environmental services to you. If you have any questions concerning this report, or if we can assist you in any other matter, please contact me at (415) 992-3755

Sincerely,

Jay Grenfell
National Client Manager

EXECUTIVE SUMMARY

Partner Engineering and Science, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in accordance with the scope of work and limitations of ASTM Practice E1527-21, the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) and set forth by City Ventures for the property located at 845 Stewart Drive in Sunnyvale, Santa Clara, California (the "subject property"). The Phase I Environmental Site Assessment is designed to provide City Ventures with an assessment concerning environmental conditions (limited to those issues identified in the report) as they exist at the subject property.

Property Description

The subject property is located on the northwest corner of the Stewart Street and De Guigne Drive intersection within a commercial and industrial area of Santa Clara. Please refer to the table below for a further description of the subject property:

SUBJECT PROPERTY DATA

Address(es):	845 Stewart Drive, Sunnyvale, California
Additional Current Address(es):	None Identified
Historical Address(es):	None Identified
Property Use:	Commercial
Land Acreage (Ac):	1.1
Number of Buildings:	One
Number of Floors:	One
Gross Building Area (SF):	16,868 (Per Assessor)
Net Rentable Area (SF):	16,868
Date of Construction:	1974
Parcel Number:	205-21-010
Type of Construction:	Concrete tilt-up
Current Tenants:	Agape Grill in addition to three vacant office units
Site Assessment Performed By:	Yen Dinh of Partner
Site Assessment Conducted On:	October 25, 2024
Regulatory Radius Report Date:	October 16, 2024
Lien Search Date:	N/A
Report Date:	October 30, 2024
FOIAs Date:	October 2024
Groundwater Flow Direction (Inferred):	North

Estimated Depth to Groundwater (Feet bgs):	10 to 20

The subject property is currently occupied by Agape Grill in addition to three vacant office units . Onsite operations consist of retail sales of food and beverages and associated dine-in and take-out activities. In addition to the current structure, the subject property is also improved with asphalt-paved parking areas, associated landscaping, drainage features, and perimeter fencing.

According to available historical sources, the subject property was formerly undeveloped as early as 1897; developed with agricultural land between 1939 and circa 1968; become vacant land in 1974 (per aerial photograph) and developed with the current structure in 1974 (per assessor). Tenants on the subject property have included PHOTO GRAPHCS PRINTING (1976-1981); ALTAMAR PAC TRADING (1987); T G I C IMPORTERS (1987); CA MACHINING CNTR (1987-91); SUMMIT PRINTING CO (1990-91); C&M TECHNOLOGY (1995); HAWK MFG & ENGRG (1995); MARYATT TECH INC (1995); PANTRONIX CORP (1995); SPIRE TECHNOLOGIES (1995); DE LA CRUZ DEL (1998-99); E E S A INC (1998-99); INFLUENCE SOFTWARE INC (1998-99); ALBIN ENGIENERING SERVICES INC (1998-02); ALBIN ENGINEERING SERVICES INC (2001-02); I T SOLUTIONS INC (2001-02); MODCOL CORP (2001-02); DE LA CRUZ DELI (2001-2003); ALBIN ENGINEERING SVC INC (2003); MODCOL (2003); LIELA'S CAFE (2007-2012); SHORAL INC (2007-2012); DISPLAY WORKS LLC (2007-2016); AGILIANCE (2016); ATM (2016); JANENE ARGENDELI (2016-2020); AGAPE GRILL (2016-2023); SHORAI INC (2016-2023); AGILIANCE INC (2020); SAFE MANAGEMENT (2020-2023); SPECTRANETIX (2020-2023)

The adjoining properties are tabulated below:

ADJOINING PROPERTIES

Direction	Land Use/Occupant
North:	Apple Office Building (455 De Guigne Drive)
East:	De Guigne Drive, beyond which is commercial buildings (935 Stewart Drive)
Southeast:	De Guigne Drive and Stewart intersection, beyond which is commercial buildings (490 De Guigne Drive)
South:	Stewart Drive, beyond which is a commercial building (846, 848, 850, 860 Stewart Drive, 441, 447 De Guigne Drive)
West:	A commercial building (835 Stewart Drive)

Findings and Opinions

Recognized Environmental Condition

A recognized environmental condition (REC) refers to the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. The following was identified during the course of this assessment:

- The subject property is located approximately 150 feet to the east-northeast of the TRW Microwave, Inc. (Building 825) Superfund site (TRW Microwave Superfund Site - United States Environmental Protection Agency (EPA) Case Number 2020398. In 1983, a subsurface investigation confirmed soil, groundwater, and soil gas was impacted with TCE at the TRW Microwave Superfund site.

Cleanup is currently ongoing and overseen by the United States Environmental Protection Agency (EPA), as the lead agency; as well as by the San Francisco Bay Region Water Quality Control Board (RWQCB).

Remedial actions have included a soil vapor extraction (SVE) system, groundwater removal, and enhanced anaerobic biodegradation (EAB) treatment. In 1984, the California Regional Water Quality Control Board – San Francisco Bay Region (Regional Water Board) issued Cleanup and Abatement Order 84-004 for this site. Cleanup and Abatement Orders were also issued to upgradient and downgradient dischargers Signetics (811 Arques Avenue/440 North Wolfe Road) and Advanced Micro Devices (901/902 Thompson Place and 915 DeGuine Avenue) to characterize and cleanup groundwater conditions at their respective properties as well as offsite downgradient groundwater. Contamination associated with the Signetics and Advanced Micro Devices (AMD) sites were determined to have comingled with the TRW Microwave Superfund site.

Based on the close proximity of this site to the subject property, potential impacts from these sites to the subject property could not be ruled out and was considered a REC to the subject property. As a result, Partner conducted a Phase II Subsurface Investigation Report concurrently with this assessment.

In October 2024, Partner collected 11 soil samples, five groundwater samples, and eight soil gas samples. one soil sample per boring (five soil samples total) and each groundwater sample (five groundwater samples total) was analyzed for CVOCs [specifically 1,1-dichloroethene (DCE); cis-1,2-DCE; trans-1,2-DCE; tetrachloroethene (PCE); TCE; and vinyl chloride via EPA Method 8260B. Each soil gas sample (eight soil gas samples total) was analyzed for CVOCs via EPA Method TO-15. According to analytical data for soil, cis-1,2-DCE; PCE, and TCE were detected in one or more of the analyzed soil samples at concentrations above the laboratory reporting limits (RLs); however, none of these CVOC detections exceed the applicable ESLs. No other CVOCs were detected in the analyzed soil samples at concentrations above laboratory RLs and the RLs do not exceed the applicable ESLs.

According to analytical data for groundwater, cis-1,2-DCE was detected in three of the five groundwater samples and TCE was detected in each of the groundwater samples at concentrations exceeding the applicable regulatory screening criteria. The cis-1,2-DCE impacts to groundwater appear to be limited in extent and the TCE impacts to groundwater appear to be throughout the subject property impact, and the source is likely attributed to the TRW Microwave Superfund site. The regulatory exceedances of CVOCs indicate a release to groundwater beneath the subject property and pose a potential threat to human health and/or the environment. However, Partner noted that it was unlikely that shallow groundwater beneath the subject property would be used directly as a source of drinking water in the foreseeable future, and the subject property and surrounding area is currently serviced by the local municipal water system. Therefore, adverse impacts to the current and/or future occupants of the subject property are unlikely to be significant.

- According to the analytical results for soil gas, PCE was detected in three of the eight soil gas and TCE was detected five of the eight soil gas samples at concentrations exceeding the applicable regulatory screening criteria. The PCE and TCE impacts to soil gas appear to be limited in extent and the source is likely attributed to the TRW Microwave Superfund site. The regulatory exceedances in soil gas indicate a potential vapor intrusion concern for the current and/or future occupants of the subject property.

  Accordingly, the client engaged Partner to perform further subsurface investigation of the Subject Property, the results of which are presented under separate cover (i.e., a Phase II Environmental Site Assessment report). It is Partner Engineering's understanding that, based on the potential

vapor intrusion concern, and in an abundance of caution and on a voluntary basis, the developer has committed to installing vapor barriers and passive venting systems below contemplated residential construction as part of the client's project proposal to the City of Sunnyvale, in order to prevent vapor intrusion into indoor air, so that there are no exceedances of ESLs and other regulatory thresholds in relation to indoor air. These systems are a human health-protective measure frequently implemented throughout the State of California and are a measure considered effective by the scientific community and the regulatory community in regard to preventing vapor intrusion, and are a measure deemed to be diligent and consistent with accepted industry standards. Therefore, to be amply clear, these vapor barriers and passive venting systems are more than adequately protective in relation to use of the Subject Property for residential purposes.

There is no requirement to obtain regulatory oversight in regard to the installation of the vapor barriers and venting systems, such that they may be incorporated into contemplated building construction on a self-directed basis. Accordingly, Partner Engineering recommends installing these systems below contemplated residential construction at the Subject Property but, otherwise, recommends no further action or investigation regarding the issues discussed above because the proposed measures are adequate and sufficient for ensuring indoor air is not affected at concentrations exceeding residential screening levels.

Controlled Recognized Environmental Condition

A controlled recognized environmental condition (CREC) refers to a REC affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, activity and use limitations or other property use limitations).

- Partner identified no CRECs in connection with the Subject Property.

Historical Recognized Environmental Condition

A historical recognized environmental condition (HREC) refers to a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations).

- Partner identified no HRECs in connection with the Subject Property.

Business Environmental Risk

A Business Environmental Risk (BER) is a risk which can have a material environmental or environmentally driven impact on the business associated with the current or planned use of commercial real estate, not necessarily related to those environmental issues required to be investigated in this practice. The following was identified during the course of this assessment:

- Due to the age of the subject property building, there is a potential that asbestos-containing material (ACM) and lead-based paint (LBP) are present. Readily visible suspect ACMs and painted surfaces were observed in good condition. ACMs would need to be sampled to confirm the presence or absence of asbestos prior to any renovation or demolition activities to prevent potential exposure to workers and building occupants.

Significant Data Gaps

No significant data gaps affecting the ability of the Environmental Professional to identify a REC were encountered during this assessment.

Conclusions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-21 of 845 Stewart Drive in Sunnyvale, Santa Clara, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed no evidence of CRECs or HRECs in connection with the subject property; however, a REC and BER were identified. Based on the conclusions of this assessment, Partner recommends the following:

- Design and implementation of vapor intrusion prevention measures (i.e., vapor barriers and passive venting systems) below contemplated residential construction, as a diligent and human health risk-protective measure to prevent indoor air from being affected above regulatory thresholds and to more than adequately support use of the Subject Property for residential purposes.

1.0 INTRODUCTION

Partner Engineering and Science, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in conformance with the scope and limitations of ASTM Practice E1527-21 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) for the property located at 845 Stewart Drive in Sunnyvale, Santa Clara, California (the "subject property"). Any exceptions to, or deletions from, this scope of work are described in the report.

1.1 Purpose

The purpose of this ESA is to identify existing or potential Recognized Environmental Conditions (as defined by ASTM Standard E1527-21) affecting the subject property that: 1) constitute or result in a material violation or a potential material violation of any applicable environmental law; 2) impose any material constraints on the operation of the subject property or require a material change in the use thereof; 3) require clean-up, remedial action or other response with respect to Hazardous Substances or Petroleum Products on or affecting the subject property under any applicable environmental law; 4) may affect the value of the subject property; and 5) may require specific actions to be performed with regard to such conditions and circumstances. The information contained in the ESA Report will be used by Client to: 1) evaluate its legal and financial liabilities for transactions related to foreclosure, purchase, sale, loan origination, loan workout or seller financing; 2) evaluate the subject property's overall development potential, the associated market value and the impact of applicable laws that restrict financial and other types of assistance for the future development of the subject property; and/or 3) determine whether specific actions are required to be performed prior to the foreclosure, purchase, sale, loan origination, loan workout or seller financing of the subject property.

This ESA was performed to permit the User to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) liability (hereinafter, the "landowner liability protections," or "LLPs"). ASTM Standard E1527-21 constitutes "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35)(B).

1.2 Scope of Work

The scope of work for this ESA is in accordance with and to the extent necessary to achieve the goal of the requirements set forth in the ASTM Standard E1527-21. This assessment included: 1) a property and adjoining site reconnaissance; 2) interviews with key personnel; 3) a review of historical sources; 4) a review of regulatory agency records; and 5) a review of a regulatory database report provided by a third-party vendor. Partner contacted local agencies, such as environmental health departments, fire departments and building departments to obtain readily ascertainable information to determine any current and/or former hazardous substances usage, storage and/or releases of hazardous substances on the subject property. Additionally, Partner researched readily available information on the presence of activity and use limitations (AULs) at these agencies. As defined by ASTM E1527-21, AULs include both legal (that is, institutional) and physical (that is, engineering) controls that may include legal or physical restrictions or limitations on the use of, or access to, a site or facility: 1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil, soil vapor, groundwater, or surface water on the subject property; or 2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or engineering controls (IC/ECs), are intended to prevent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil, soil vapor, groundwater, and/or surface water on a property.

If requested by Client, this report may also include the identification, discussion of, and/or limited sampling of asbestos-containing materials (ACMs), lead-based paint (LBP), mold, and/or radon.

1.3 Limitations

Partner warrants that the findings and conclusions contained herein were accomplished in accordance with the methodologies set forth in the Scope of Work. These methodologies are described as representing good commercial and customary practice for conducting an ESA of a property for the purpose of identifying recognized environmental conditions. There is a possibility that even with the proper application of these methodologies there may exist on the subject property conditions that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available information. Partner believes that the information obtained from the record review and the interviews concerning the subject property is reliable. However, Partner cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete. The conclusions and findings set forth in this report are strictly limited in time and scope to the date of the evaluations. The conclusions presented in the report are based solely on the services described therein, and not on scientific tasks or procedures beyond the scope of agreed-upon services or the time and budgeting restraints imposed by the Client. No other warranties are implied or expressed.

Some of the information provided in this report is based upon personal interviews, and research of available documents, records, and maps held by the appropriate government and private agencies. This report is subject to the limitations of historical documentation, availability, and accuracy of pertinent records, and the personal recollections of those persons contacted.

This practice does not address requirements of any state or local laws or of any federal laws other than the all appropriate inquiry provisions of the LLPs. Further, this report does not intend to address all of the compliance and safety concerns, if any, associated with the subject property.

Environmental concerns, which are beyond the scope of a Phase I ESA as defined by ASTM include the following: ACMs, LBP, radon, and lead in drinking water. These issues may affect environmental risk at the subject property and may warrant discussion and/or assessment; however, are considered non-scope issues. If specifically requested by the Client, these non-scope issues are discussed in Section 6.3.

1.4 User Reliance

City Ventures (herein referred to as Client) engaged Partner to perform this assessment in accordance with an agreement governing the nature, scope and purpose of the work as well as other matters critical to the engagement. All reports, both verbal and written, are for the sole use and benefit of Client. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with Partner granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against Partner, its officers, employees, vendors, successors or assigns. Any such unauthorized user shall be responsible to protect, indemnify and hold Partner, Client and their respective officers, employees, vendors, successors and assigns harmless from any and all claims, damages, losses, liabilities, expenses (including reasonable attorneys' fees) and costs attributable to such Use. Unauthorized use of this report shall constitute acceptance of and commitment to these responsibilities, which shall be irrevocable and shall apply regardless of the cause of action or legal theory pled or asserted. Additional legal penalties may apply.

This report has been completed under specific Terms and Conditions relating to scope, relying parties, limitations of liability, indemnification, dispute resolution, and other factors relevant to any reliance on this report. Any parties relying on this report do so having accepted the Terms and Conditions for which this report was completed. A copy of Partner's standard Terms and Conditions can be found at http://www.partneresi.com/terms-and-conditions.php.

1.5 Limiting Conditions

The findings and conclusions contain all the limitations inherent in these methodologies that are referred to in ASTM Practice E1527-21.

Specific limitations and exceptions to this ESA are more specifically set forth below:

- Interviews with past or current owners, operators and occupants were not reasonably ascertainable and thus constitute a data gap. Based on information obtained from other historical sources, this data gap is not expected to alter the findings of this assessment.
- Partner requested information relative to deed restrictions and environmental liens, a title search, and completion of the AAI User Questionnaire from the Report User. This information was not provided at the time of the assessment. This data gap is not expected to alter the findings of this assessment.
- Partner submitted Freedom of Information Act (FOIA) requests to Bay Area Air Quality Management District (BAAQMD) for information pertaining to Permits to Operate (PTO), Notices of Violation (NOV), or Notices to Comply (NTC) or the presence of AULs, dry cleaning machines, or USTs for the subject property. As of this writing, this agency has not responded to Partner's request. Based on information obtained from other historical resources, this limitation is not expected to alter the overall findings of this assessment.

Due to time constraints associated with this report, the Client has requested the report despite the above-listed limitations.

2.0 SITE DESCRIPTION

2.1 Site Location and Legal Description

The subject property at 845 Stewart Drive in Sunnyvale, California is located on the northwest corner of the Stewart Street and De Guigne Drive intersection. According to the Santa Clara County Assessor (SCA), the subject property is legally described as Assessor Parcel Number (APN) 205-21-010. ownership has been vested in Jenab Khalil and Tiffany R Trustee & Et Al.

Please refer to Figure 1: Site Location Map, Figure 2: Site Plan, Figure 3: Topographic Map, and Appendix A: Site Photographs for the location and site characteristics of the subject property.

2.2 Current Property Use

The subject property is currently occupied by Agape Grill in addition to three vacant office units . Onsite operations consist of retail sales of food and beverages and associated dine-in and take-out activities. The subject property features a single-story building divided into four suites: A, B, C, and D. Suite A is currently occupied by the Agape Grill and the remaining suites are vacant. located centrally on the property. In addition to the current structure, the subject property is also improved with asphalt-paved parking areas, associated landscaping, drainage features, and perimeter fencing.

The subject property is designated for industrial and services development by the City of Sunnyvale.

2.3 Current Use of Adjoining Properties

The subject property is located within a commercial and industrial area of During the vicinity reconnaissance, Partner observed the land uses on adjoining properties as defined in ASTM Practice E1527-21 as any real property or properties the border of which is contiguous or partially contiguous with that of the property, or that would be contiguous or partially contiguous with that of the property but for a street, road, or other public thoroughfare separating them. The adjoining properties are tabulated below:

ADJOINING PROPERTIES

Direction	Land Use/Occupant
North:	Apple Office Building (455 De Guigne Drive)
East:	De Guigne Drive, beyond which is commercial buildings (935 Stewart Drive)
Southeast:	De Guigne Drive and Stewart intersection, beyond which is commercial buildings (490 De Guigne Drive)
South:	Stewart Drive, beyond which is a commercial building (846, 848, 850, 860 Stewart Drive, 441, 447 De Guigne Drive)
West:	A commercial building (835 Stewart Drive)

2.4 Physical Setting Sources

2.4.1 Topography

TOPOGRAPHIC DATA SUMMARY

Quadrangle Year:	2021
Quadrangle Name:	Mountain View, California

TOPOGRAPHIC DATA SUMMARY

Source:	USGS 7.5 Minute Topographic Map
Elevation (Feet):	42
Slope Direction:	Northwest
Slope Degree:	Relatively flat

A copy of the most recent topographic map is included as Figure 3 of this report.

2.4.2 Hydrology

While under natural and undisturbed conditions shallow groundwater flow most frequently follows the topography of the land surface, natural or man-made features can affect flow direction, and the presumed flow may not match the actual flow directions at the subject property and vicinity.

HYDROLOGY DATA SUMMARY

Groundwater Flow Direction:	North
Groundwater Flow Source:	A previous subsurface investigation conducted on a nearby property (968 Stewart Drive, SL18261682)
Estimated Depth to Groundwater (Feet bgs):	10 to 20
Estimated Depth Source:	A previous subsurface investigation conducted on a nearby property (968 Stewart Drive, SL18261682)
Closest Body of Surface Water Name:	Sunnyvale East Channel
Closest Body of Surface Water Distance (Miles):	1,581 feet
Closest Body of Surface Water Direction:	West
Water System Operator:	City of Sunnyvale
Contact at Water System Operator:	
Shallow Groundwater Use:	
Source of Drinking Water:	The sources of public water for the City of Sunnyvale are surface water and groundwater from treated surface water from the San Francisco Regional Water System (SFRWS) managed by the San Francisco Public Utilities Commission (SFPUC), treated surface water from the Santa Clara Valley Water District (Valley Water), and local groundwater from six deep wells.

2.4.3 Geology/Soils

GEOLOGY AND SOIL DATA SUMMARY

Physiographic Province:	The subject property is situated within the Coast Range physiographic province of the State of California. The Coast Ranges, extend approximately 600 miles from the Oregon Border to the Santa Ynez River near Santa Barbara, are characterized by elongated ranges and narrow valleys that are approximately parallel to the coast.
Geologic Unit Description:	Structural features, including faults and synclinal folds, largely control topography in the province and reflect both previous and existing regional tectonic regimes.
Geologic Data Source:	United States Department of Agriculture (USDA) Natural Resources Conservation Service Web Soil Survey
Soil Series Name:	Urban Land
Soil Series Description:	Urban Land complex are those soils in which the soil's original structure and content have been so altered by human activities it has lost its original characteristics and is thus unidentifiable. Urban soils consist of nearly level to moderately steep areas where the soils have been altered or obscured by urban works and structures. Buildings and pavement cover more than 85 percent of the surface. Included in this unit in mapping are many small areas where the original soil material has been disturbed by construction and areas where fill has been added. Slopes range from 0 to 2 percents.
Additional Information:	

2.4.4 Flood Zone Information

FLOOD ZONE DATA SUMMARY

Source:	Federal Emergency Management Agency
Community Panel No.	0608C0045H
FIRM Date:	May 18, 2009
Zone Designation:	Zone X (shaded); defined as moderate risk areas within the 0.2-percent-annual-chance floodplain, areas of 1-percent-annual-chance flooding where average depths are less than 1 foot, areas of 1-percent-annual-chance flooding where the contributing

FLOOD ZONE DATA SUMMARY

	drainage area is less than 1 square mile, and areas protected from the 1-percent-annual-chance flood by a levee.

A copy of the reviewed flood map is included in Appendix B of this report.

3.0 HISTORICAL INFORMATION

Partner obtained historical use information about the subject property from a variety of sources. A chronological listing of the historical data found is summarized in the table below:

HISTORICAL USE INFORMATION

Years	Resource	Description/Use
1897 - 1899	Topographic Maps	Undeveloped Land
1939 - 1968	Aerial Photographs, Topographic Maps	Agricultural Land
1974	Aerial Photographs	Undeveloped Land
1974 - Present	Aerial Photographs, Assessor Records, , Topographic Maps, City Directories	Commercial

Tenants on the subject property have included PHOTO GRAPHCS PRINTING (1976-1981); ALTAMAR PAC TRADING (1987); T G I C IMPORTERS (1987); CA MACHINING CNTR (1987-91); SUMMIT PRINTING CO (1990-91); C&M TECHNOLOGY (1995); HAWK MFG & ENGRG (1995); MARYATT TECH INC (1995); PANTRONIX CORP (1995); SPIRE TECHNOLOGIES (1995); DE LA CRUZ DEL (1998-99); E E S A INC (1998-99); INFLUENCE SOFTWARE INC (1998-99); ALBIN ENGIENERING SERVICES INC (1998-02); ALBIN ENGINEERING SERVICES INC (2001-02); I T SOLUTIONS INC (2001-02); MODCOL CORP (2001-02); DE LA CRUZ DELI (2001-2003); ALBIN ENGINEERING SVC INC (2003); MODCOL (2003); LIELA'S CAFE (2007-2012); SHORAL INC (2007-2012); DISPLAY WORKS LLC (2007-2016); AGILIANCE (2016); ATM (2016); JANENE ARGENDELI (2016-2020); AGAPE GRILL (2016-2023); SHORAI INC (2016-2023); AGILIANCE INC (2020); SAFE MANAGEMENT (2020-2023); SPECTRANETIX (2020-2023)

No other potential environmental concerns were identified in association with the current or former use of the subject property.

The subject property parcel was historically used for agricultural purposes. There is the potential that agricultural related chemicals such as pesticides, herbicides, and fertilizers, may have been used and stored onsite. The subject property is either paved over or covered by structures that minimize direct contact to any potential remaining contaminants in the soil. Additionally, during previous site development activities, near surface soils (where residual agricultural chemical concentrations would have most likely been present, if at all) were likely mixed with fill material or disturbed during grading. Also, it is common that engineered fill is placed over underlying soils as part of the development activities. These additional variables serve to further reduce the potential for exposure to residual agricultural chemicals (if any). Based on these reasons, Partner concludes that the potential former use of agricultural chemicals is not considered an environmental concern at this time.

According to historical city directories, the subject property was occupied by Photographics Printing in 1976 to 1981, California Machining Center in 1987 to 1991, Summit Printing in 1990 to 1991 and Hawk Manufacturing and Engineering in 1995. Operations associated with these tenants are unknown and may have utilized small amounts of hazardous materials and/or storage and generation of hazardous wastes. However, based on the short duration of each tenant onsite coupled with the lack of regulatory agency listings for the storage of reportable quantities of hazardous materials/wastes, the occupancy of these tenants are not expected to represent a significant environmental concern.

3.1 Aerial Photograph Review

Partner obtained available aerial photographs of the subject property and surrounding area from Environmental Risk Information Services (ERIS) on October 17, 2024. The inferred uses of the subject property and adjoining properties as interpreted from the aerial photographs in Appendix B are tabulated below:

Date:	**1939, 1948, 1956**	Scale:	1"=500'
Subject Property:	Appears to be agricultural land		
North:	Appears to be agricultural land		
East:	Appears to be agricultural land		
Southeast:	Appears to be agricultural land		
South:	Appears to be agricultural land		
West:	Appears to be agricultural land		

Date:	**1960**	Scale:	1”=500’
Subject Property:	No significant changes visible except a road adjoining to the east		
North:	No significant changes visible		
East:	No significant changes visible across a road		
Southeast:	No significant changes visible		
South:	No significant changes visible		
West:	No significant changes visible		

Date:	**1968**	Scale:	1”=500’
Subject Property:	No significant changes visible		
North:	No significant changes visible		
East:	Appears to be developed with buildings across a street		
Southeast:	Appears to be developed with the current site improvement across an intersection		
South:	No significant changes visible across a road		
West:	No significant changes visible		

Date:	**1974**	Scale:	1”=500’
Subject Property:	Appears to be vacant land		
North:	No significant changes visible		

East:	No significant changes visible
Southeast:	No significant changes visible
South:	Appears to be developed with the current site improvements across a street
West:	Appears to be vacant land

Date:	**1982, 1991, 2003, 2006, 2009, 2010, 2012, 2014, 2016, 2018, 2020, 2022**	Scale:	1”=500’
Subject Property:	Appears to be developed with the current site improvement		
North:	Appears to be developed with the current site improvement		
East:	Appears to be developed with the current site improvement		
Southeast:	No significant changes visible		
South:	No significant changes visible		
West:	Appears to be developed with the current site improvement		

Copies of select aerial photographs are included in Appendix B of this report.

3.2 Fire Insurance Maps

Partner reviewed the collection of Fire insurance maps (FIMs) from ERIS on October 16, 2024. FIM coverage was not available for the subject property.

A copy of the no coverage letter is included in Appendix B of this report.

3.3 City Directories

Partner reviewed historical city directories obtained from ERIS on October 24, 2024 for past names and businesses that were listed for the subject property and adjoining properties. The findings are tabulated below:

SUBJECT PROPERTY SUMMARY

City Directory Search for 845 Stewart Dr (Subject Property)

4.0 REGULATORY RECORDS REVIEW

4.1 Regulatory Agencies

State Department

REGULATORY AGENCY DATA

Name of Agency:	California Environmental Protection Agency (CalEPA)
Point of Contact:	https://siteportal.calepa.ca.gov/
Agency Address:	1001 I St, Sacramento, California 95814
Agency Phone Number:	(916) 323-2514
Date of Contact:	October 15, 2024
Method of Communication:	Online Research

Summary of Communication:

No records regarding hazardous substance use, storage or releases, or the presence of USTs and AULs on the subject property were on file with the CalEPA.

Health Department

REGULATORY AGENCY DATA

Name of Agency:	Santa Clara County Environmental Health Department (SCCEHD)
Point of Contact:	Ms. Melissa Belloso
Agency Address:	1555 Berger Drive, Building 2, Suite 300, San Jose, California 95112
Agency Phone Number:	(408) 918-3428
Date of Contact:	October 16, 2024
Method of Communication:	Online Request Form

Summary of Communication:

No records regarding hazardous substance use, storage or releases, or the presence of USTs and AULs on the subject property were on file with the SCCEHD.

Fire Department

REGULATORY AGENCY DATA

Name of Agency:	Santa Clara County Fire Department (SCCFD)
Point of Contact:	publicrecords@sccfd.org
Agency Address:	1315 Dell Avenue, Campbell CA, 95008
Agency Phone Number:	(408) 378-4010
Date of Contact:	October 16, 2024

Method of Communication:	Email

Summary of Communication:

No records regarding hazardous substance use, storage or releases, or the presence of USTs and AULs on the subject property were on file with the SCCFD.

Building Department

REGULATORY AGENCY DATA

Name of Agency:	City of Sunnyvale Building Department (CSBD)
Point of Contact:	
Agency Address:	456 W Olive Ave, Sunnyvale, CA 94086,
Agency Phone Number:	(408) 730-7444
Date of Contact:	October 22, 2024
Method of Communication:	Online Research

Summary of Communication:

Records were available for review, as further discussed in the following table.

Building Records Reviewed for 845 Stewart Drive (Subject Property)		
Year(s)	**Owner/Occupant/Address**	**Description**
1974 - 2016	Not provided	Various building and fire permits and inspection

Planning Department

REGULATORY AGENCY DATA

Name of Agency:	City of Sunnyvale Planning Department (CSPD)
Point of Contact:	
Agency Address:	456 W Olive Ave, Sunnyvale, CA 94086
Agency Phone Number:	(408) 730-7444
Date of Contact:	October 24, 2024
Method of Communication:	Online Research

Summary of Communication:

According to reviewed online documents, the subject property is zoned M-S for industrial and services development by the City of Sunnyvale.

Oil & Gas Exploration

REGULATORY AGENCY DATA

Name of Agency:	California Geologic Energy Management Division (CalGEM)

Point of Contact:	https://maps.conservation.ca.gov/doggr/wellfinder/
Agency Address:	801 K Street, MS 24-01, Sacramento, California, 95814
Agency Phone Number:	(916) 322-1080
Date of Contact:	October 24, 2024
Method of Communication:	Online Research

Summary of Communication:

According to CalGEM, no oil or gas wells are located on or adjoining to the subject property.

Assessor's Office

REGULATORY AGENCY DATA

Name of Agency:	Santa Clara County Assessor's Office
Point of Contact:	https://www.sccassessor.org/
Agency Address:	130 W Tasman Dr, San Jose, CA 95134
Agency Phone Number:	(408) 299-5500
Date of Contact:	October 24, 2024
Method of Communication:	Online Research

Summary of Communication:

According to records reviewed, the subject property is identified by Assessor Parcel Number (APN) 205-21-010 and is currently owned by Jenab Khalil and Tiffany R Trustee Et Al.

Air Pollution Control Agency

REGULATORY AGENCY DATA

Name of Agency:	San Francisco Bay Area Air Quality Management District (SFBAAQMD)
Point of Contact:	Rochele Henderson
Agency Address:	375 Beale Street, Suite 600, San Francisco, CA 94105
Agency Phone Number:	(415) 516-1916
Date of Contact:	October 16, 2024
Method of Communication:	Online Request Form

Summary of Communication:

As of the date of this report, Partner has not received a response from the BAAQMD for inclusion in this report.

Regional Water Quality Agency

REGULATORY AGENCY DATA

Name of Agency:	San Francisco Bay- Regional Water Quality Control Board (SFBRWQCB)
Point of Contact:	http://geotracker.waterboards.ca.gov/
Agency Address:	1515 Clay Street, Suite 1400, Oakland, California 94612
Agency Phone Number:	(510) 622-2300
Date of Contact:	October 16, 2024
Method of Communication:	Online Research

Summary of Communication:

No records regarding hazardous substance use, storage or releases, or the presence of USTs and AULs on the subject property were on file with the SFBRWQCB.

Department of Toxic Substances Control

REGULATORY AGENCY DATA

Name of Agency:	California Department of Toxic Substances Control (DTSC) EnviroStor Online Database Hazardous Waste Tracking System (ENVIROSTOR)
Point of Contact:	https://www.envirostor.dtsc.ca.gov/public/ https://hwts.dtsc.ca.gov/report_search.cfm?id=5
Agency Address:	700 Heinz Avenue, Berkeley, CA 94710
Agency Phone Number:	(510) 622-2300
Date of Contact:	October 16, 2024
Method of Communication:	Online Research

Summary of Communication:

No records regarding hazardous substance use, storage or releases, or the presence of USTs and AULs on the subject property were on file with the Envirostor tenants.

Former tenants were identified in the HWTS database, as further discussed in Section 4.2.

Copies of pertinent documents are included in Appendix B of this report.

4.2 Mapped Database Records Search

The regulatory database report provided by ERIS documents the listing of sites identified on federal, state, county, city, and tribal (when applicable) standard source environmental databases within the approximate minimum search distance (AMSD) specified by ASTM Practice E1527-21. The data from these sources are updated as these data are released and integrated into one database. The information contained in this report was compiled from publicly available sources.

The environmental database information is used to identify environmental concerns in connection with the subject property. The listings also serve to identify the known indications of the storage, use, generation,

disposal, or release of hazardous substance at the subject property and the potential for contaminants to migrate onto the subject property from off-site sources in groundwater or soil in the form of liquids or vapor.

Using the ASTM definition of migration, Partner considers the migration of hazardous substances or petroleum products in any form onto the subject property during the evaluation of each site listed on the radius report, which includes solid, liquid, and vapor.

4.2.1 Regulatory Database Summary

The following table lists the sites as categorized by the regulatory database within the prescribed AMSD. The locations of the sites are plotted utilizing a geographic information system, which geocodes the site addresses. The accuracy of the geocoded locations is approximately +/-300 feet.

DATABASE REPORT DATA

Database	AMSD Radius (mile)	Listings Identified		
		Subject Property	Adjoining Properties	Surrounding Area Sites of Concern
Federal NPL	1.00	N	N	N
Delisted NPL Site	0.50	N	N	N

4.2.2 Subject Property Listings

The subject property was identified as a FINDS/FRS, HAZ GEN, and HAZNET site, as discussed below:

SUBJECT PROPERTY DATABASE LISTING

Database:	FINDS/FRS, RCRA NON GEN
Site Name:	Spectranetix Inc
Address:	845 Stewart Drive
Discussion:	The subject property tenant, identified as Spectranetix Inc, is reported as a temporary hazardous waste generator in 2019 and currently inactive. Waste generated onsite is not reported in the tracking system. No further information regarding violations or releases of hazardous substance is observed. Based on the regulatory oversight and the absence of a documented release, this listing is not expected to represent a significant environmental concern.

SUBJECT PROPERTY DATABASE LISTING

	Database:	HAZNET
	Site Name:	Manda Walsh
	Address:	845 Stewart Drive, Suite D
Discussion:	The subject property tenant, identified as Manda Walsh, is reported as a temporary hazardous waste generator in 2013 and currently inactive. Waste generated onsite is not reported in the tracking system. No further information regarding violations or releases of hazardous substance is observed. Based on the regulatory oversight and lack of listings indicative of a release, this listing is not expected to represent a significant environmental concern.	

SUBJECT PROPERTY DATABASE LISTING

	Database:	HAZ GEN
	Site Name:	Suzanne Decker
	Address:	845 Stewart Drive, Suite D
Discussion:	The subject property tenant, identified as Suzanne Decker, is reported as a hazardous waste generator from 1997 to 2000 and currently inactive. According to the DTSC HWTS database, waste generated onsite included 0.779 tons of waste oil and mixed oil in 1997 only. No further information regarding violations or releases were identified. Based on the small quantities reported, singularity of the manifest and lack of listings indicative of a release, this listing is not expected to represent a significant environmental concern.	

SUBJECT PROPERTY DATABASE LISTING

	Database:	HAZNET
	Site Name:	Biocurious
	Address:	845 Stewart Drive, Suite C
Discussion:	The subject property tenant, identified as Biocurious, is reported as a hazardous waste generator from 2011 to 2014 and currently inactive. Waste generated onsite is not reported in the tracking system. No further information regarding violations or releases of hazardous substance is observed. Based on the regulatory oversight and the absence of a documented release, this listing is not expected to represent a significant environmental concern.	

4.2.3 Adjoining Property Listings

The adjoining properties were identified as a State/Tribal Equivalent NPL, State/Tribal Equivalent CERCLIS, Federal CERCLIS-NFRAP Site, Federal RCRA-SQG Generator Site, and CERCLIS NFRAP, SEMS ARCHIVE, RCRA NON GEN, and PFAS IND sites, as discussed below:

ADJOINING PROPERTY DATABASE LISTING

Property Name:	Medtronic-Stewart Site. Medtronic/ Epix
Address:	945 Stewart Drive
Direction:	East
Hydrological Gradient:	Up-Gradient
Database Listing:	EMISSIONS, RCRA SQG
Discussion:	The adjoining property, identified as Medtronic-Stewart Site and Medtronic/Epix, is reported as a toxic pollutant emission facility and a small quantity hazardous waste generator in the regulatory databases. Wastes generaed onsite reportedly include alkaline solution (pH >12.5) with metals (antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, selenium, silver, thallium, vanadium, and zinc). No record of violations or releases of hazardous substance is reported in the database. Based on the regulatory oversight and the absence of a documented release, these listings are not expected to represent a significant environmental concern with respect to the subject property.

ADJOINING PROPERTY DATABASE LISTING

Property Name:	Trimble Navigation
Address:	935 Stewart Drive
Direction:	East
Hydrological Gradient:	Up-Gradient
Database Listing:	EMISSIONS
Discussion:	The adjoining property, identified as Trimble Navigation, is reported as a toxic pollutant emission facility in the regulatory database. No record of violations or releases of hazardous substance is reported in the database. Based on the regulatory oversight and the absence of a documented release, these listings are not expected to represent a significant environmental concern with respect to the subject property.

ADJOINING PROPERTY DATABASE LISTING

Property Name:	Signetics Corp
Address:	897 Stewart Drive, 848 Stewart Drive

Direction:	Southeast, South
Hydrological Gradient:	Up-Gradient
Database Listing:	CERCLIS NFRAP, FINDS/FRS, HAZNET, RCRA SQG, SEM ARCHIVE
Discussion:	The adjoining property, identified as Signetics Corp, is currently reported as a small quantity hazardous waste generating facility in the regulatory database. Wastes generated onsite is not reported in the tracking system. No record of violations or releases of hazardous substance is reported in the database. This site was also identified as an archived SEMS and CERCLIS NFRAP site. A preliminary assessment was reportedly conducted in 1986, and the site was archived in 1987 due to not qualifying to be listed on the NPL. Based on the facility name, this site appears to be affiliated with the Signetics company, a responsible party identified for the contamination at the TRW Microwave site, as discussed below. Based on the documentation reviewed, Signetics is responsible for the contamination identified at the 811 Arques Avenue/440 North Wolfe Road properties further west. Contamination at these facilities have reportedly comingled with contamination at the TRW Microwave site and the Advanced Micro Devices (901/902 Thompson Place and 915 DeGuine Avenue) facilities. These sites are further discussed below.

ADJOINING PROPERTY DATABASE LISTING

Property Name:	Advanced Micro Devices
Address:	898 Stewart Drive
Direction:	Southeast
Hydrological Gradient:	Up-Gradient
Database Listing:	CUPA SANTACLARA, EMISSIONS, UST SWEEPS
Discussion:	The adjoining property, identified as Advanced Micro Devices, is reported as an active hazardous waste generator, a toxic pollutant emission facility, and underground storage tank facility in the regulatory database. No information of wastes generated onsite, violations, or releases of hazardous substance to the subsurface is reported in the database. Based on the regulatory oversight and the absence of a documented release, these listings are not expected to represent a significant environmental concern with respect to the subject property.

ADJOINING PROPERTY DATABASE LISTING

Property Name:	444-452 Deguigne and 897 Stewart Properties, National Semiconductor Corp
Address:	various Stewart Drive, 2900 Semiconductor Avenue

Direction:	Southeast
Hydrological Gradient:	Up-Gradient
Database Listing:	Geotracker, NPL
Discussion:	The adjacent parcel to the southeast is reported as a site with contaminated groundwater since 1982. Currently, this parcel serves as a business park with multiple industrial tenants, including Advanced Micro Devices (AMD) and Western Electric Park. From 1987 to 2019, the San Francisco Bay Regional Water Quality Control Board conducted investigations to determine the source of contamination. Findings indicated that the groundwater contamination was not due to releases at these specific tenants but rather from the migration of volatile organic compounds (VOCs) originating from other nearby sites. The eastern section of this parcel is part of an area listed on the National Priorities List (NPL). According to available information, National Semiconductor Corporation previously manufactured electronic equipment on this 50-acre site in Santa Clara County, California. Suspected sources of contamination included underground storage tanks, sumps, and piping. In 1982, National Semiconductor began removing leaking tanks and equipment, implemented a groundwater pump-and-treat system, and excavated contaminated soil from specific areas. Groundwater extraction and treatment remain ongoing, and additional treatment technologies are under consideration. The primary contaminants of concern are chlorinated organic solvents, especially trichloroethene (TCE), affecting a groundwater area shared with the Monolithic Memories Superfund site. Although these sites are separately listed on the NPL, cleanup activities have been coordinated as part of an area-wide approach, as further discussed below. According to information reviewed, the RWQCB issued a no further action letter for this site, none of the former occupants of this site were ever used for electronic manufacturing operations. Environmental concerns associated with the area wide Superfund sites are further discussed below.

ADJOINING PROPERTY DATABASE LISTING

Property Name:	Mitel Networks Corporation, Shoretel
Address:	960 Stewart Drive
Direction:	Southeast
Hydrological Gradient:	Up-Gradient
Database Listing:	EMISSIONS
Discussion:	The adjoining properties, identified as Mitel Networks Corporation and Shoretel, is reported as a toxic pollutant emission facilities in the regulatory database. No record of violations or releases of hazardous substance to the subsurface is reported in the database. Based on the regulatory oversight and the absence of a documented release, these listings are not expected to represent a significant environmental concern with respect to the subject property.

ADJOINING PROPERTY DATABASE LISTING

Property Name:	Acellent Technologies Inc
Address:	835 Stewart Drive
Direction:	West
Hydrological Gradient:	Cross-Gradient
Database Listing:	RCRA NON GEN, PFAS IND, HAZ GEN, CERS HAZ, FINDS/FRS
Discussion:	The adjoining property, identified as Acellent Technologies Inc, is reported as an active hazardous waste generator, chemical storage facility, and classified as a potential PFAS-handling facility in the regulatory databases. However inclusion in the PFAS dataset does not indicate that PFAS are being manufactured, processed, used, or released by the facility. Listed facilities potentially handle PFAS based on their industrial profile, but are unconfirmed by the EPA. Wastes generated under this facility reportedly include alkaline solution without metals, unspecified aqueous solution, and liquids with ph<=2. No record of violations or releases of hazardous substance is reported in the database. Based on the regulatory oversight and the absence of a documented release, these listings are not expected to represent a significant environmental concern with respect to the subject property.

Based on the findings, vapor migration is considered an environmental concern at this time.

4.2.4 Surrounding Area Listings of Sites of Concern

The property to the DIRECTION is identified as a/an State/Tribal Equivalent NPL and State/Tribal Equivalent CERCLIS site in the regulatory database report, as as discussed below:

SITES OF CONCERN DATABASE LISTING

Property Name:	TRW Microwave, Inc. (Building 825)
Address:	825 Steward Drive
Direction:	West
Hydrological Gradient:	Up-Gradient
Database Listing:	NPL, CALSITES, CDO, CAO, CERCLIS, CERS HAZ, CLEANUP SITES, CUPA SANTA CLARA, EMISSIONS, ENVIROSTOR, FED ENG, HSOL, PFAS IND, RCRA LQG, RCRA NON-GEN, RCRA SQG. SEMS. SUPERFUND ROD
Date of Release:	April 1983
Substance Released:	Chlorinated Solvents
Media Impacted:	soil, groundwater
Date of Closure:	NA

Responsible Party:	Northrop Grumman (formerly RW Microwave)
Substance Involved:	Volatile Organic Compounds (VOCs), particularly chlorinated solvents
Years of Operation:	1968-1992
Status:	Active

Discussion:

In May 1983, the RWQCB found that ground water beneath this building was contaminated with dichlorobenzene, tetrachloroethylene (PCE), TCE, acetone, N-butyl acetate, and xylene. Between 1983 and 1984, 25 groundwater monitoring wells were installed on this site and at upgradient and downgradient locations as well as near the former waste solvent UST and former ANS. TCE was detected up to 6,100,000 micrograms per liter (µg/l) in monitoring well T-2A and up to 1,100,000 µg/l in monitoring well T-2B adjacent to the former waste solvent UST. In 1985, TRW began groundwater extraction and treatment (GWET) on this site to remove impacted onsite groundwater and to control offsite migration. In 1984, the California Regional Water Quality Control Board – San Francisco Bay Region (Regional Water Board) issued Cleanup and Abatement Order 84-004. Cleanup and Abatement Orders were also issued to upgradient and downgradient dischargers Signetics (811 Arques Avenue/440 North Wolfe Road) and Advanced Micro Devices (901/902 Thompson Place and 915 DeGuine Avenue) to characterize and cleanup groundwater conditions at their respective properties as well as offsite downgradient groundwater. Contamination associated with the Signetics and Advanced Micro Devices (AMD) sites were determined to have comingled with the TRW Microwave site (the subject property). According to the 1991 USEPA Record of Decision, the TRW Microwave, Signetics, AMD and offsite downgradient groundwater study area was separated into four separate operable units (OUs). The USEPA added TRW OU, Signetics OU, AMD OU, and offsite downgradient groundwater OU (OOU) to the NPL in 1991. The Signetics and AMD and operable units are discussed below. In 1991, the Regional Water Board issued Site Cleanup Requirements Order 91-103 for this site, and In 1992, a Covenant and Agreement to Restrict Use of the Property (CRUP) was recorded for this site which prohibits: use of groundwater beneath the subject property for drinking water; and the drilling or installation of water production wells without approval from the Regional Water Board or any other agency with jurisdiction. Between the 1970s and 1982, four separate waste solvent USTs were located adjacent to the northeast corner of the former site structure. Between 1982 and 1983, the fourth-generation waste solvent UST was removed from this site. Post-excavation soil samples collected from the waste solvent excavation revealed PCE and TCE in contamination in soil with concentrations up to 730 milligrams per kilogram (mg/kg) and 15,000 mg/kg, respectively. Between 1993 and 1997, a soil vapor extraction (SVE) system was installed and operated at the site. Between 1993 and 1996, approximately 367 pounds of TCE were reportedly removed by the SVE system. In 1997, the SVE system was shut down and soil vapor testing was performed in 1997 and 1998. Monitoring conducted in 1998 indicated that all VOCs were at or below 5 parts per million (ppm); except for one extraction point located within the area of

the former waste solvent UST (MP-1). Between 1999 and 2001 and in 2005 and 2007, TRW conducted enhanced anaerobic bioremediation (EAB) injections into groundwater at this site. The GWET system on this site remained in operation from 1985 to 2001. After destruction of the GWET system, the remedial plan was revised to EAB with monitored natural attenuation (MNA). The former site structure was demolished in 2001, and the site structure was constructed in its current configuration by 2003. Remedial activity and annual groundwater monitoring at the site is ongoing under the responsibility of Northrop Grumman. After a groundwater sampling event in 2015, Northrop Grumman concluded that impacted groundwater was migrating onto the subject property from an offsite source due to generally higher contamination reported in upgradient wells comparted to downgradient wells. According to the most recent groundwater sampling report completed by Groundwater and Environmental and Engineering Services, Inc. (GES) on behalf of Northrop Grumman in October 2021, concentrations of TCE, cis-1,2-DCE, and vinyl chloride remained on the site above the applicable California Maximum Contamination Levels (MCLs). In 2021, TCE was reported at concentrations as high as 1,400 ug/l, cis-1,2-DCE was reported as high as 410 ug/l, and total vinyl chloride was reported as high as 65 ug/l. The California MCLs for TCE, cis-1,2-DCE, and vinyl chloride are 5.0 ug/l, 6.0 ug/l, and 0.5 ug/l, respectively. Based on the close proximity of this site to the subject property, impacts from this site to the subject property cannot be ruled out and is considered a REC. As such, a Phase II Subsurface Investigation was conducted concurrently with this assessment and is further discussed in Section 5.2.6.

SITES OF CONCERN DATABASE LISTING

Property Name:	Advanced Micro Devices
Address:	915 De Guigne Drive/901 and 902 Thompson Place
Direction:	South
Hydrological Gradient:	Up-Gradient
Database Listing:	NPL, CALSITES, CDO/CAO, CERCLIS, CERS HAZ, Cleanup Sites, DEED, EMIISSIONS, Envirostor, FED ENG, HSOL Santa Clara, HWP, LOP Santa Clara, LUST, RCRA CORRACTS, RCRA SQG, SEMS, Superfund ROD
Date of Release:	1965
Substance Released:	Chlorinated Solvents
Media Impacted:	soil, groundwater
Date of Closure:	NA
Responsible Party:	Advanced Micro Devices (AMD)
Substance Involved:	Volatile Organic Compounds (VOCs), particularly chlorinated solvents

Years of Operation:	1965-1992
Status:	Active
Discussion:	According to information from the CalEPA and USEPA, AMD conducted electronics manufacturing and semiconductor fabrication at the 901/902 Thompson Place facility between 1965 and 1992. AMD used solvents containing VOCs including TCE and corrosives during semiconductor fabrication. USTs and acid neutralization systems were used by AMD for storage and or treatment of wastes. Releases of VOCs to soil and groundwater from the acid neutralization systems were discovered in 1982. TCE was detected up to 110,000 ug/l in groundwater. In 1991, the Regional Water Board issued Site Cleanup Requirements Order 91-102, which named AMD as discharger for cleanup of groundwater at 901/902 Thompson Place. The selected remedy form for the 901/902 Thompson Place was soil source removal and continued operation of the GWET system. According to information reviewed for the TRW OU contamination and AMD 901/902 Thompson Place plumes have likely comingled. GWET activities also began in 1982 to remove groundwater containing VOCs for treatment. Operation of the GWET system was discontinued in 2002, and an in-situ bioremediation (ISB) program was implemented at the site in 2005. According to the most recent 5-year Review Report (2019) an ISB and MNA program continues to operate at the site. According to the most recent available groundwater sampling results (October 2018), TCE, cis-1,2-DCE, trans-1,2-dichloroethene (trans-1,2-DCE) and vinyl chloride remain in groundwater beneath the facility at levels above the applicable California MCLs. In 2018, TCE was reported at concentrations as high as 290 ug/l, cis-1,2-DCE was reported as high as 310 ug/l, and vinyl chloride reported as high as 29 ug/l. Based on the close proximity of this site to the subject property, impacts from this site to the subject property cannot be ruled out and is considered a REC. As such, a Phase II Subsurface Investigation was conducted concurrently with this assessment and is further discussed in Section 5.2.6.

SITES OF CONCERN DATABASE LISTING

Property Name:	Signetics Inc., Philips Semiconductors, Lowe's
Address:	South-southwest
Direction:	South-southwest
Hydrological Gradient:	Up-Gradient
Database Listing:	NPL, AST, CALSITES, CDO/CAO, CERCLIS, CERS HAZ, Cleanup Sites, CUPA Santa Clara, DEED, EMIISSIONS, Evirostor, FED ENG, HHSS, HIST Tank, HSOL Santa Clara, HWP, LOP Santa Clara, LUST, RCRA CORRACTS, RCRA NonGEN, RCRA SQG, RCRA TSD, SEMS, Superfund ROD and UST SWEEPS
Date of Release:	1982
Substance Released:	Chlorinated Solvents

Media Impacted:	soil, groundwater
Date of Closure:	NA
Responsible Party:	Signetics Inc., Philips Semiconductors, Lowe's
Substance Involved:	Chlorinated Solvents
Years of Operation:	1982
Status:	Active

Discussion: According to information from the CalEPA and USEPA, Signetics (now Philips) began electronics and semiconductor manufacturing at 811 East Arques Avenue in 1964. The site was comprised of four buildings located at 811 E. Arques Avenue, 440 North Wolfe Road, 815 Stewart Drive and 830 Stewart Drive. Various organic solvents were reportedly used in the manufacturing processes. In 1982, a source area for the site was identified as a leak in an underground waste solvent storage tank west of the former 811 East Arques Avenue building. As a result of this investigation a second source area was identified near wastewater neutralization tanks on the north side of the former 811 Arques building. VOCs including TCE were detected in soil and groundwater at the facility. TCE was detected up to 20 mg/kg on the north side of the 811 East Arques building near the acid neutralization system and up to 44,000 ug/l in groundwater. Four diesel USTs were also located along the western portion of the 440 North Wolfe Road building. In 1982, impacted groundwater in the was removed using the existing 440 North Wolfe Road building basement dewatering system. In 1991, the Regional Water Board issued Site Cleanup Requirements Order 91-104, which named Philips as a discharger for cleanup of groundwater at 811 East Arques Avenue site as well as a discharger for the commingled plume with TRW and AMD for off-Site and downgradient groundwater to the north (OOU). Remedial actions have been conducted at the site since 1982 consisting of soil excavations, soil vapor extraction, GWET activities, and ISB. According to the most recent 5-year report, the GWET activities are ongoing. The Site Cleanup Requirements Order 91-104 established the following chemicals of concern at the site: 1,1-dichloroethane; 1,1-dichloroethene; cis-1,2-DCE; trans-1,2-DCE; Freon 113; 1,1,1-trichloroethane; TCE; and vinyl chloride. According to the most recent available groundwater sampling results (January-December 2022), TCE and cis-1,2-DCE have been detected most frequently at the highest concentrations at the site above the applicable California MCLs. In 2022, TCE was reported at concentrations as high as 16,000 ug/l, cis-1,2-DCE was reported as high as 67,000 ug/l, and vinyl chloride reported as high as 23,000 ug/l. Based on the close proximity of this site to the subject property, impacts from this site to the subject property cannot be ruled out and is considered a REC. As such, a Phase II Subsurface Investigation was conducted concurrently with this assessment and is further discussed in Section 5.2.6.

4.2.5 Unplottable Listings

No unplottable listings of concern are identified in the regulatory database report.

A copy of the regulatory database report is included in Appendix C of this report.

5.0 USER PROVIDED INFORMATION AND INTERVIEWS

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the *Brownfields Amendments*), the *User* must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. The *User* should provide the following information to the *environmental professional*. Failure to provide this information could result in a determination that *all appropriate inquiries* is not complete. The *User* is asked to provide information or knowledge of the following:

- Review Title and Judicial Records for Environmental Liens and AULs
- Specialized Knowledge or Experience of the User
- Actual Knowledge of the User
- Reason for Significantly Lower Purchase Price
- Commonly Known or *Reasonably Ascertainable* information
- Degree of Obviousness
- Reason for Preparation of this Phase I ESA

Fulfillment of these user responsibilities is key to qualification for the identified defenses to CERCLA liability. Partner requested our Client to provide information to satisfy User Responsibilities as identified in Section 6 of the ASTM guidance.

Pursuant to ASTM Practice E1527-21, Partner requested the following site information from City Ventures (User of this report).

USER RESPONSIBILITIES

Item	Provided By User
AAI User Questionnaire	Yes
Title Records, Environmental Liens, and AULs	No
Specialized Knowledge	No
Actual Knowledge	No
Valuation Reduction for Environmental Issues	No
Identification of Key Site Manager	Yes
Reason for Performing Phase I ESA	Yes
Prior Environmental Reports	Yes

5.1 Interviews

5.1.1 Interview with Owner

The owner of the subject property, identified as Jenab Khalil and Tiffany R trustee & Et Al, was not available to be interviewed at the time of the assessment.

5.1.2 Interview with Report User

Please refer to Section 5.2 below for information requested from the Report User. The information requested was not received prior to the issuance of this report. Because the Report User (Client) is a lender,

it is understood that the Report User would not have knowledge of the property that would significantly impact our ability to satisfy the objectives of this assessment. The lack of this information is not considered to represent a significant data gap.

5.1.3 Interview with Key Site Manager

Mr. Adam Foster, key site manager, indicated that they had no information pertaining to any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property; any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the subject property; or any notices from a governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

The key site manager further stated that there are no USTs, ASTs, clarifiers, oil/water separators, groundwater monitoring wells, or hazardous substance use/storage/generation on the subject property to the best of their knowledge.

5.1.4 Interviews with Past Owners, Operators and Occupants

Interviews with past owners, operators, and occupants were not conducted since information regarding the potential for contamination at the subject property was obtained from other sources.

5.2 User Provided Information

5.2.1 Title Records, Environmental Liens, and AULs

Partner was not provided with title records or environmental lien and AUL information for review as part of this assessment.

5.2.2 Specialized Knowledge

The User did not have specialized knowledge of environmental conditions associated with the subject property at the time of the assessment.

5.2.3 Actual Knowledge of the User

The User was not aware of environmental liens and/or AULs encumbering the subject property or in connection with the subject property at the time of the assessment.

5.2.4 Valuation Reduction for Environmental Issues

The User was not aware of any reductions in property value due to environmental issues.

5.2.5 Commonly Known or Reasonably Ascertainable Information

The User did not provide information that is commonly known or reasonably ascertainable within the local community about the subject property at the time of the assessment.

5.2.6 Previous Reports and Other Provided Documentation

The following information was provided to Partner for review during the course of this assessment:

Phase II Subsurface Investigation Report, Partner Engineering & Science (October 31, 2024)

Partner Engineering & Science (Partner) prepared this report on behalf of City Ventures. The assessment consisted of site reconnaissance.

- Partner collected 11 soil samples, five groundwater samples, and eight soil gas samples on October 22, 2024,

- According to analytical results, residual concentrations of CVOCs were detected in soil; however, these detections do not exceed applicable regulatory screening criteria and therefore do not pose a threat to human health and/or the environment.
- According to the analytical results collected for groundwater, cis-1,2-DCE was detected in three of the five groundwater samples and TCE was detected in each of the groundwater samples at concentrations exceeding the applicable regulatory screening criteria. The cis-1,2-DCE impacts to groundwater appear to be limited in extent and the TCE impacts to groundwater appear to be throughout the subject property impact, and the source is likely attributed to the TRW Microwave Superfund site. The regulatory exceedances of CVOCs indicate a release to groundwater beneath the subject property and pose a potential threat to human health and/or the environment. Partner notes that it is unlikely that shallow groundwater beneath the subject property will be used directly as a source of drinking water in the foreseeable future, and the subject property and surrounding area is currently serviced by the local municipal water system. Therefore, adverse impacts to the current and/or future occupants of the subject property are unlikely to be significant
- According to analytical results collected for soil gas, PCE was detected in three of the eight soil gas samples and TCE was detected five of the eight soil gas samples at concentrations exceeding the applicable regulatory screening criteria. The PCE and TCE impacts to soil gas appear to be limited in extent and the source is likely attributed to the TRW Microwave Superfund site. The regulatory exceedances in soil gas indicate a potential vapor intrusion concern for the current and/or future occupants of the subject property
- Based on the soil gas results, Partner recommends the design and implementation of a vapor intrusion prevention measures (i.e., vapor barriers with passive venting system) during the future construction of the proposed building(s) to address the identified vapor intrusion concern.

6.0 SITE RECONNAISSANCE

The weather at the time of the site visit was sunny and clear. Refer to Section 1.5 for limitations encountered during the field reconnaissance and Sections 2.1 and 2.2 for subject property operations. The table below provides the site assessment details:

SITE ASSESSMENT DATA

Site Assessment Performed By:	Yen Dinh
Site Assessment Conducted On:	October 25, 2024

Partner was unaccompanied during the site reconnaissance.

SITE VISIT PERSONNEL FOR 845 STEWART DRIVE (SUBJECT PROPERTY)

Name	Title/Role	Contact Number	Site Walk*
Adam Foster	Director of Development	(925) 323-0443	No

* Accompanied Partner during the field reconnaissance activities and provided information pertaining to the current operations and maintenance of the subject property

No potential environmental concerns were identified during the onsite reconnaissance.

6.1 General Site Characteristics

6.1.1 Solid Waste Disposal

Solid waste generated at the subject property is disposed of in commercial dumpsters located on the northwest side of the subject property. An independent solid waste disposal contractor, Specialty, removes solid waste from the subject property. Solid waste generated at the subject property includes food waste, waste cooking oil, and household-type trash. No evidence of illegal dumping of solid waste was observed during the Partner site reconnaissance.

6.1.2 Sewage Discharge and Disposal

Sanitary discharges on the subject property are directed into the municipal sanitary sewer system. The City of Sunnyvale services the subject property vicinity. No wastewater treatment facilities were observed or reported on the subject property. No septic systems were observed or reported on the subject property.

6.1.3 Stormwater and Surface Water Drainage

Stormwater is removed from the subject property primarily by sheet flow action across the paved surfaces towards stormwater drains located throughout the property and in the public right of way. On-site stormwater drains discharge to municipal owned and maintained storm sewer system. No drywells were identified on the subject property.

6.1.4 Source of Heating and Cooling

Heating and cooling systems as well as domestic hot water equipment are fueled by electricity and natural gas provided by Pacific Gas & Electric (PG&E). The mechanical system is comprised of rooftop mounted packaged electrical/natural gas HVAC units. Hot water is provided by individual natural gas water heaters.

6.1.5 Wells and Cisterns

No aboveground evidence of wells or cisterns was observed during the site reconnaissance.

6.1.6 Wastewater

Domestic wastewater generated at the subject property is disposed by means of the sanitary sewer system. No industrial processes are currently performed at the subject property.

6.1.7 Septic Systems

No septic systems were observed or reported on the subject property.

6.1.8 Additional Site Observations

No additional general site characteristics were observed during the site reconnaissance.

6.2 Potential Environmental Hazards

6.2.1 Hazardous Substances and Petroleum Products Used or Stored at the Site

No evidence of the use of reportable quantities of hazardous substances was observed on the subject property.

Small quantities of general maintenance supplies were found to be properly labeled and stored at the time of the assessment with no signs of leaks, stains, or spills. The storage and use of maintenance supplies does not appear to pose a significant threat to the environmental integrity of the subject property at this time.

6.2.2 Aboveground & Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)

No evidence of current or former ASTs or USTs was observed during the site reconnaissance.

6.2.3 Evidence of Releases

No spills, stains, or other indications that a surficial release has occurred at the subject property were observed.

6.2.4 Polychlorinated Biphenyls (PCBs)

Older transformers and other electrical equipment could contain PCBs at a level that subjects them to regulation by the US EPA. PCBs in electrical equipment are controlled by US EPA regulations 40 CFR, Part 761. Under the regulations, there are three categories into which electrical equipment can be classified: 1) Less than 50 parts per million (ppm) of PCBs – “Non-PCB;” 2) 50 ppm-500 ppm – “PCB-Contaminated;” and, 3) Greater than 500 ppm – “PCB-Containing.” The manufacture, process, or distribution in commerce or use of any PCB in any manner other than in a totally enclosed manner was prohibited after July 2, 1979.

TRANSFORMERS AND HYDRAULIC EQUIPMENT

Type of Equipment	Location	Number	PCB Containing	Concern
Pad-Mounted Transformers	Northwest	One	Unlikely	Yes

The on-site reconnaissance addressed indoor and outdoor transformers that may contain PCBs. One pad-mounted transformer was observed on the subject property. The transformer is not labeled indicating PCB content. No staining or leakage was observed in the vicinity of the transformers. Based on the good condition of the equipment, the transformer is not considered an environmental concern.

No other potential PCB-containing equipment (interior transformers, oil-filled switches, hoists, lifts, dock levelers, hydraulic elevators, balers, etc.) was observed on the subject property during Partner's reconnaissance.

6.2.5 Strong, Pungent or Noxious Odors

No strong, pungent or noxious odors were evident during the site reconnaissance.

6.2.6 Pools of Liquid

No pools of liquid were observed on the subject property during the site reconnaissance.

6.2.7 Drains, Sumps and Clarifiers

No drains, sumps, or clarifiers, other than those associated with storm water removal, were observed on the subject property during the site reconnaissance.

6.2.8 Pits, Ponds and Lagoons

No pits, ponds, or lagoons were observed on the subject property.

6.2.9 Stressed Vegetation

No stressed vegetation was observed on the subject property.

6.2.10 Additional Potential Environmental Hazards and Emerging Contaminants

Partner evaluated the current subject property use during the site reconnaissance for potential environmental hazards, including Per- and Polyfluoroalkyl Substances (PFAS) impacts to the subject property. Based on the site observations likely PFAS impacts to the subject property based on current use were not identified. Based on this information, PFAS are not considered an environmental concern at this time.

No additional environmental hazards, including landfill activities or radiological hazards, were observed.

6.3 Non-ASTM Services

6.3.1 Asbestos-Containing Materials (ACMs)

Asbestos is the name given to a number of naturally occurring, fibrous silicate minerals mined for their useful properties such as thermal insulation, chemical and thermal stability, and high tensile strength. The Occupational Safety and Health Administration (OSHA) regulation 29 CFR 1926.1101 requires certain construction materials to be presumed to contain asbestos, for purposes of this regulation. All thermal system insulation (TSI), surfacing material, and asphalt/vinyl flooring that are present in a building that have not been appropriately tested are "presumed asbestos-containing material" (PACM).

A limited, visual survey of areas accessible from ground level for the presence of suspect ACM at the subject property was conducted. The objective of this visual survey was to note the presence and condition of suspect ACM listed by EPA, OSHA, and other regulatory and recognized sources as suspect ACM and/or considered friable or non-friable. Please refer to the table below for identified suspect ACM:

SUSPECT ACMs

Suspect ACM	Location	Friable Yes/No	Physical Condition
Drywall Systems, Floor Tiles, Floor Tile Mastic, Ceiling Tiles	Throughout Building Exterior	No	Good
Spray-Applied Acoustical Material, Stucco	Throughout Building Exterior	No	Good

Prior to disturbance, Partner recommends a comprehensive asbestos survey of the property be completed to determine the presence, condition, friability and likely future condition of suspect or confirmed ACM. All suspect materials must be handled as ACM according to local, state and federal regulations until the results of sampling and analysis indicate the material is a non-ACM. According to the US EPA, ACM that is intact and in good condition can, in general, be managed safely in-place under an Operations and Maintenance (O&M) Program until removal is dictated by renovation, demolition, or deteriorating material condition.

Partner was not provided building plans or specifications for review, which may have been useful in determining areas likely to have used ACM.

6.3.2 Lead-Based Paint (LBP)

Lead is a highly toxic metal that affects virtually every system of the body. LBP is defined as any paint, varnish, stain, or other applied coating that has 1 mg/cm2 (or 5,000 µg/g or 0.5% by weight) or more of lead. Congress passed the Residential Lead-Based Paint Hazard Reduction Act of 1992, also known as “Title X,” to protect families from exposure to lead from paint, dust, and soil. Under Section 1017 of Title X, intact LBP on most walls and ceilings is not considered a “hazard,” although the condition of the paint should be monitored and maintained to ensure that it does not become deteriorated. Further, Section 1018 of this law directed the Housing and Urban Development (HUD) and the US EPA to require the disclosure of known information on LBP and LBP hazards before the sale or lease of most housing built before 1978.

Based on the age of the subject property building (pre-1978), there is a potential that LBP is present. Interior and exterior painted surfaces were observed in good condition and therefore not expected to represent a "hazard," although the condition of the paint should be monitored and maintained to ensure it does not become deteriorated. Interior and exterior painted surfaces were observed in good condition and therefore not expected to represent a "hazard," although the condition of the paint should be monitored and maintained to ensure it does not become deteriorated.

Actual material samples would need to be collected in order to determine if LBP is present.

6.3.3 Radon

Radon is a colorless, odorless, naturally occurring, radioactive, inert, gaseous element formed by radioactive decay of radium (Ra) atoms. The US EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three Radon Zones, according to the table below:

EPA RADON ZONES

EPA Zones	Average Predicted Radon Levels	Potential
Zone 1	Exceed 4.0 pCi/L	Highest

Zone 2	Between 2.0 and 4.0 pCi/L	Moderate
Zone 3	Less than 2.0 pCi/L	Low

It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the US EPA recommends site-specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Review of the US EPA Map of Radon Zones places the subject property in Zone 2. Based upon the radon zone classification, radon is not considered an environmental concern.

6.3.4 Lead in Drinking Water

LEAD IN DRINKING WATER SUMMARY

Water System Operator:	City of Sunnyvale
Contact at Water System Operator:	
Source of Drinking Water:	The sources of public water for the City of Sunnyvale are surface water and groundwater from treated surface water from the San Francisco Regional Water System (SFRWS) managed by the San Francisco Public Utilities Commission (SFPUC), treated surface water from the Santa Clara Valley Water District (Valley Water), and local groundwater from six deep wells.
Year of Annual Water Quality Report:	2024
Compliance Status:	Water supplied is in compliance with all State and Federal regulations pertaining to drinking water standards for lead.

Water sampling was not conducted to verify water quality.

6.3.5 Mold

Molds are microscopic organisms found virtually everywhere, indoors and outdoors. Mold will grow and multiply under the right conditions, needing only sufficient moisture (e.g.in the form of very high humidity, condensation, or water from a leaking pipe, etc.) and organic material (e.g., ceiling tile, drywall, paper, or natural fiber carpet padding).

Partner observed accessible, interior areas of the subject property building for significant evidence of mold growth with the exceptions detailed in Section 1.5 of this report; however, this assessment should not be used as a mold survey or inspection. Additionally, this limited assessment was not designed to assess all areas of potential mold growth that may be affected by mold growth on the subject property. Rather, it is intended to give the client an indication as to whether or not conspicuous (based on observed areas) mold growth is present at the subject property. This evaluation did not include a review of pipe chases, mechanical systems, or areas behind enclosed walls and ceilings.

No obvious indications of water damage or mold growth were observed during Partner's visual assessment.

6.3.6 Wetlands

The subject property does not appear to be a designated wetland area based on information obtained from the United States Fish and Wildlife Service; however, a comprehensive wetlands survey would be required in order to formally determine actual wetlands on the subject property. No settling ponds, lagoons, surface impoundments, wetlands or natural catch basins were observed at the subject property during this assessment.

6.4 Adjoining Property Reconnaissance

The adjoining property reconnaissance consisted of observing the adjoining properties from the subject property premises.

6.4.1 Hazardous Substances and Petroleum Products Used or Stored at the Site

No hazardous substances or petroleum products were observed on adjoining properties during the limited adjoining property reconnaissance.

6.4.2 ASTs/USTs for Hazardous Substances or Petroleum Products

No ASTs or USTs for hazardous substances/petroleum products were observed on adjoining properties during the limited adjoining property reconnaissance.

6.4.3 Evidence of Releases

No evidence of a release was observed on adjoining properties during the limited adjoining property reconnaissance.

6.4.4 PCBs

No PCB containing materials were observed on adjoining properties during the limited adjoining property reconnaissance.

6.4.5 Strong, Pungent, or Noxious Odors

No strong, pungent, or noxious odors were observed on adjoining properties during the limited adjoining property reconnaissance.

6.4.6 Pools of Liquid

No pools of liquid were observed on adjoining properties during the limited adjoining property reconnaissance.

6.4.7 Drains, Sumps, and Clarifiers

No drains, sumps, or clarifiers were observed on adjoining properties during the limited adjoining property reconnaissance.

6.4.8 Pits, Ponds, and Lagoons

No pits, ponds, or lagoons were observed on adjoining properties during the limited adjoining property reconnaissance.

6.4.9 Stressed Vegetation

No stressed vegetation was observed on adjoining properties during the limited adjoining property reconnaissance.

6.4.10 Additional Potential Environmental Hazards and Emerging Contaminants

Partner evaluated the current adjoining property uses during the site reconnaissance for potential environmental hazards, including PFAS impacts to the subject property. Based on observations made from the subject property borders likely emerging contaminants or PFAS impacts to the subject property from current adjoining property uses were not identified. Based on this information, PFAS are not considered an environmental concern.

No additional environmental hazards were observed on adjoining properties during the limited adjoining property reconnaissance.

7.0 VAPOR ENCROACHMENT CONDITIONS

Partner conducted a limited non-intrusive vapor screening on the subject property to identify, to the extent feasible, the potential for vapor encroachment conditions (VECs) in connection with the subject property. This included consideration of chemicals of concern (COC) that may migrate as vapors into the subsurface of the subject property as a result of contaminated soil and groundwater on or near the property.

This screening utilized readily available data sources previously discussed in this Phase I ESA that includes:

- the physical setting of the subject property (Section 2.4),
- standard historical sources for the subject property, adjoining, and surrounding area (Section 3.0),
- known or potentially contaminated sites as identified from information from regulatory agencies and sites on Federal, State, tribal and local databases (Section 4.0), and
- information from the site reconnaissance (Section 6.0) of the subject property and observations of the surrounding properties.

The results of our data collection, reconnaissance, and analysis are tabulated below:

POTENTIAL FOR VAPOR ENCROACHMENT TO IMPACT THE SUBJECT PROPERTY

Area of Concern	Likely or Known VEC to Subject Property
Subject Property Existing Operations or Conditions (Sections 2.0 and 6.0)	None identified that impact the subject property.
Historical Uses of the Subject Property (Section 3.0)	None identified that impact the subject property.
Adjoining Property Operations or Existing Conditions (Sections 2.3 and 6.4)	None identified that impact the subject property.
Historical Uses of Adjoining Properties or Nearby Properties (Section 3.0)	Based on the soil gas results for the Phase II Subsurface Investigation conducted concurrently with this ESA, Partner recommends the design and implementation vapor intrusion prevention measures (i.e., vapor barriers and passive venting systems) during the future construction of the proposed building(s) to address the identified vapor intrusion concern.
Regulatory Review of sites identified on Federal, State, tribal and Local Environmental Databases which were located in the AMSD (Section 4.0)	None identified that impact the subject property.

- Based on the findings of the limited non-intrusive vapor screening, vapor intrusion is likely to be an issue of concern in connection with the existing structures on the subject property. Accordingly, the client engaged Partner to perform further subsurface investigation of the Subject Property, the results of which are presented under separate cover (i.e., a Phase II Environmental Site Assessment report). It is Partner Engineering's understanding that, based on the potential vapor intrusion concern, and in an abundance of caution and on a voluntary basis, the developer has committed to installing vapor barriers and passive venting systems below contemplated residential

construction as part of the client's project proposal to the City of Sunnyvale, in order to prevent vapor intrusion into indoor air, so that there are no exceedances of ESLs and other regulatory thresholds in relation to indoor air. These systems are a human health-protective measure frequently implemented throughout the State of California and are a measure considered effective by the scientific community and the regulatory community in regard to preventing vapor intrusion, and are a measure deemed to be diligent and consistent with accepted industry standards. Therefore, to be amply clear, these vapor barriers and passive venting systems are more than adequately protective in relation to use of the Subject Property for residential purposes.

There is no requirement to obtain regulatory oversight in regard to the installation of the vapor barriers and venting systems, such that they may be incorporated into contemplated building construction on a self-directed basis. Accordingly, Partner Engineering recommends installing these systems below contemplated residential construction at the Subject Property but, otherwise, recommends no further action or investigation regarding the issues discussed above because the proposed measures are adequate and sufficient for ensuring indoor air is not affected at concentrations exceeding residential screening levels.

8.0 FINDINGS AND CONCLUSIONS

Findings and Opinions

Recognized Environmental Condition

A recognized environmental condition (REC) refers to the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. The following was identified during the course of this assessment:

- The subject property is located approximately 150 feet to the east-northeast of the TRW Microwave, Inc. (Building 825) Superfund site (TRW Microwave Superfund Site - United States Environmental Protection Agency (EPA) Case Number 2020398. In 1983, a subsurface investigation confirmed soil, groundwater, and soil gas was impacted with TCE at the TRW Microwave Superfund site. Cleanup is currently ongoing and overseen by the United States Environmental Protection Agency (EPA), as the lead agency; as well as by the San Francisco Bay Region Water Quality Control Board (RWQCB).

  Remedial actions have included a soil vapor extraction (SVE) system, groundwater removal, and enhanced anaerobic biodegradation (EAB) treatment. In 1984, the California Regional Water Quality Control Board – San Francisco Bay Region (Regional Water Board) issued Cleanup and Abatement Order 84-004 for this site. Cleanup and Abatement Orders were also issued to upgradient and downgradient dischargers Signetics (811 Arques Avenue/440 North Wolfe Road) and Advanced Micro Devices (901/902 Thompson Place and 915 DeGuine Avenue) to characterize and cleanup groundwater conditions at their respective properties as well as offsite downgradient groundwater. Contamination associated with the Signetics and Advanced Micro Devices (AMD) sites were determined to have comingled with the TRW Microwave Superfund site.

  Based on the close proximity of this site to the subject property, potential impacts from these sites to the subject property could not be ruled out and was considered a REC to the subject property. As a result, Partner conducted a Phase II Subsurface Investigation Report concurrently with this assessment.

  In October 2024, Partner collected 11 soil samples, five groundwater samples, and eight soil gas samples. one soil sample per boring (five soil samples total) and each groundwater sample (five groundwater samples total) was analyzed for CVOCs [specifically 1,1-dichloroethene (DCE); cis-1,2-DCE; trans-1,2-DCE; tetrachloroethene (PCE); TCE; and vinyl chloride via EPA Method 8260B. Each soil gas sample (eight soil gas samples total) was analyzed for CVOCs via EPA Method TO-15. According to analytical data for soil, cis-1,2-DCE; PCE, and TCE were detected in one or more of the analyzed soil samples at concentrations above the laboratory reporting limits (RLs); however, none of these CVOC detections exceed the applicable ESLs. No other CVOCs were detected in the analyzed soil samples at concentrations above laboratory RLs and the RLs do not exceed the applicable ESLs.

  According to analytical data for groundwater, cis-1,2-DCE was detected in three of the five groundwater samples and TCE was detected in each of the groundwater samples at concentrations exceeding the applicable regulatory screening criteria. The cis-1,2-DCE impacts to groundwater appear to be limited in extent and the TCE impacts to groundwater appear to be throughout the subject property impact, and the source is likely attributed to the TRW Microwave Superfund site. The regulatory exceedances of CVOCs indicate a release to groundwater beneath the subject

property and pose a potential threat to human health and/or the environment. However, Partner noted that it was unlikely that shallow groundwater beneath the subject property would be used directly as a source of drinking water in the foreseeable future, and the subject property and surrounding area is currently serviced by the local municipal water system. Therefore, adverse impacts to the current and/or future occupants of the subject property are unlikely to be significant.

- According to the analytical results for soil gas, PCE was detected in three of the eight soil gas and TCE was detected five of the eight soil gas samples at concentrations exceeding the applicable regulatory screening criteria. The PCE and TCE impacts to soil gas appear to be limited in extent and the source is likely attributed to the TRW Microwave Superfund site. The regulatory exceedances in soil gas indicate a potential vapor intrusion concern for the current and/or future occupants of the subject property. Accordingly, the client engaged Partner to perform further subsurface investigation of the Subject Property, the results of which are presented under separate cover (i.e., a Phase II Environmental Site Assessment report). It is Partner Engineering's understanding that, based on the potential vapor intrusion concern, and in an abundance of caution and on a voluntary basis, the developer has committed to installing vapor barriers and passive venting systems below contemplated residential construction as part of the client's project proposal to the City of Sunnyvale, in order to prevent vapor intrusion into indoor air, so that there are no exceedances of ESLs and other regulatory thresholds in relation to indoor air. These systems are a human health-protective measure frequently implemented throughout the State of California and are a measure considered effective by the scientific community and the regulatory community in regard to preventing vapor intrusion, and are a measure deemed to be diligent and consistent with accepted industry standards. Therefore, to be amply clear, these vapor barriers and passive venting systems are more than adequately protective in relation to use of the Subject Property for residential purposes.

  There is no requirement to obtain regulatory oversight in regard to the installation of the vapor barriers and venting systems, such that they may be incorporated into contemplated building construction on a self-directed basis. Accordingly, Partner Engineering recommends installing these systems below contemplated residential construction at the Subject Property but, otherwise, recommends no further action or investigation regarding the issues discussed above because the proposed measures are adequate and sufficient for ensuring indoor air is not affected at concentrations exceeding residential screening levels.

Controlled Recognized Environmental Condition

A controlled recognized environmental condition (CREC) refers to a REC affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, activity and use limitations or other property use limitations).

- Partner identified no CRECs in connection with the Subject Property.

Historical Recognized Environmental Condition

A historical recognized environmental condition (HREC) refers to a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations).

- Partner identified no HRECs in connection with the Subject Property.

Business Environmental Risk

A Business Environmental Risk (BER) is a risk which can have a material environmental or environmentally driven impact on the business associated with the current or planned use of commercial real estate, not necessarily related to those environmental issues required to be investigated in this practice. The following was identified during the course of this assessment:

- Due to the age of the subject property building, there is a potential that asbestos-containing material (ACM) and lead-based paint (LBP) are present. Readily visible suspect ACMs and painted surfaces were observed in good condition. ACMs would need to be sampled to confirm the presence or absence of asbestos prior to any renovation or demolition activities to prevent potential exposure to workers and building occupants.

Significant Data Gaps

No significant data gaps affecting the ability of the Environmental Professional to identify a REC were encountered during this assessment.

Conclusions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-21 of 845 Stewart Drive in Sunnyvale, Santa Clara, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed no evidence of CRECs or HRECs in connection with the subject property; however, a REC and BER were identified. Based on the conclusions of this assessment, Partner recommends the following:

- Design and implementation of vapor intrusion prevention measures (i.e., vapor barriers and passive venting systems) below contemplated residential construction, as a diligent and human health risk-protective measure to prevent indoor air from being affected above regulatory thresholds and to more than adequately support use of the Subject Property for residential purposes.

9.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

Partner has performed a Phase I Environmental Site Assessment of the property located at 845 Stewart Drive in Sunnyvale, Santa Clara, California in conformance with the scope and limitations of the protocol and the limitations stated earlier in this report. Exceptions to or deletions from this protocol are discussed earlier in this report.

By signing below, Partner declares that, to the best of our professional knowledge and belief, we meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR §312. Partner has the specific qualifications based on education, training, and experience to assess a *property* of the nature, history, and setting of the subject *property*. Partner has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

RE: CITY DIRECTORY RESEARCH
845 Stewart Drive
SUNNYVALE,CA 94085

Thank you for contacting ERIS for an City Directory Search for the site described above. Our staff has conducted a reverse listing City Directory search to determine prior occupants of the subject site and adjacent properties. We have provided the nearest addresses(s) when adjacent addresses are not listed. If we have searched a range of addresses, all addresses in that range found in the Directory are included.

Note: Reverse Listing Directories generally are focused on more highly developed areas. Newly developed areas may be covered in the more recent years, but the older directories will tend to cover only the "central" parts of the city. To complete the search, we have either utilized the ACPL, Library of Congress, State Archives, and/or a regional library or history center as well as multiple digitized directories. These do not claim to be a complete collection of all reverse listing city directories produced.

ERIS has made every effort to provide accurate and complete information but shall not be held liable for missing, incomplete or inaccurate information. To complete this search we used the general range(s) below to search for relevant findings. If you believe there are additional addresses or streets that require searching please contact us at 866-517-5204.

Search Criteria:
ALL of De Guigne Dr

Public Records Request

3 messages

Yen Dinh <dinhyen1223@gmail.com> Wed, Oct 16, 2024 at 12:57 AM
To: publicrecords@sccfd.org

Dear Santa Clara COunty Fire Department,

I would like to submit a request for record review for the property listed in the attached form. Please let me know if you have any additional questions. Thank you so much for your services!

Warm regards,

Yen Dinh

Public Records <publicrecords@sccfd.org> Wed, Oct 16, 2024 at 12:57 AM
To: dinhyen1223@gmail.com

PLEASE READ ALL OF THE INFORMATION BELOW This is an automated email message.

Thank you for contacting the Santa Clara County Fire Department. SCCFD serves the areas of Campbell, Cupertino, Los Altos, Los Altos Hills, Los Gatos, Monte Sereno, and Saratoga.

For submitted report requests, you will receive an email confirmation at the time of receipt. If you do not receive a response within three (3) business days, please call our front desk at (408) 378-4010 and ask to speak with the records clerk.

TO REQUEST A REPORT or to get more information about an incident, we recommend filling out a request form:
-Visit our website: www.sccfd.org.
-Go to 'Find It Fast' at the top of the home page, followed by 'Incident Reports'.
-Fill out the incident report request form and return to publicrecords@sccfd.org to be processed.

If you have further questions, please contact our records clerk directly at (408) 341-4422 or publicrecords@sccfd.org.

Public Records <publicrecords@sccfd.org> Wed, Oct 16, 2024 at 8:44 AM
To: Yen Dinh <dinhyen1223@gmail.com>

Hi Yen,

This email responds to your request from October 16, 2024. We do not have any responsive records. This completes the Fire District's response to your request.

Thank you,

Public Records
Santa Clara County Fire Department
Office: 408-378-4010 | publicrecords@sccfd.org

NEW OFFICE ADDRESS: 1315 Dell Avenue, Campbell CA, 95008

Notice: IMPORTANT LIMITATIONS and YOUR LIABILITY

Reliance on information in Report: This report DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as database review of environmental records.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report (s) are protected by copyright owned by ERIS Information Inc. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

Violations

Violation Date: 09/27/2022 **Violation Source:** CERS
Violation Program: HMRRP **Violation Division:** Sunnyvale Department of Public Safety
Citation: HSC 6.95 25508.2 - California Health and Safety Code, Chapter 6.95, Section(s) 25508.2
Violation Notes:

Returned to compliance on 09/27/2022. Hazardous Material Business Plan was last submitted >12 months ago on 2/4/21. - Corrected on site.

Violation Description:

Failure to annually review and electronically certify that the business plan is complete and accurate on or before the annual due date.

Violations

Violation Date: 09/07/2018 **Violation Source:** CERS
Violation Program: HMRRP **Violation Division:** Sunnyvale Department of Public Safety
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Notes:

Returned to compliance on 09/13/2018. Business Plan & Chemical Inventory not submitted by due date.

Violation Description:

Failure to complete and electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.

Violations

Violation Date: 02/04/2021 **Violation Source:** CERS

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB

Violation Program: HW ***Violation Division:*** Sunnyvale Department of Public Safety
Citation: 22 CCR 12 66262.23(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.23(a)
Violation Notes:

Returned to compliance on 02/19/2021. Manifests form 2020 are missing the signature from the receiving facility.

Violation Description:

Failure to properly complete the Uniform Hazardous Waste Manifest.

Violations

Violation Date: 12/22/2016 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Sunnyvale Department of Public Safety
Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Notes:

Returned to compliance on 12/26/2016. Hazardous waste manifests were unavailable at the time of inspection. Copies of manifests must be maintained for at least three years.

Violation Description:

Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.

Violations

Violation Date: 09/27/2022 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Sunnyvale Department of Public Safety
Citation: HSC 6.5 25123.3(h)(2) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(2)
Violation Notes:

Returned to compliance on 01/03/2023. Manifest ending in ...7938 (3/12/21) does not have the signature of the receiving facility.

Violation Description:

Failure to determine the status of any hazardous waste if a signed copy of the manifest isn't received within 35 days of the date the waste was accepted by the initial transporter and/or to submit an Exception Report to DTSC if a signed copy of the manifest isn't received within 60 days of the date the waste was accepted by the initial transporter.

Violations

Violation Date: 10/21/2014 ***Violation Source:*** CERS
Violation Program: HMRRP ***Violation Division:*** Sunnyvale Department of Public Safety
Citation: HSC 6.95 25508(d) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(d)
Violation Notes:

Returned to compliance on 12/05/2014.

Violation Description:

Failure to complete and/or electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.

Violations

Violation Date: 01/30/2019 ***Violation Source:*** CERS

Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Notes:

Returned to compliance on 01/30/2019. Return Uniform Hazardous Waste Manifest for potassium carbonate (3/2/2018

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB

Violation Description:

Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.

Violations

Violation Date: 09/27/2022 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Sunnyvale Department of Public Safety
Citation: 22 CCR 12 66262.34(e) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(e)
Violation Notes:

Returned to compliance on 01/03/2023. Four solder stations do not have a container to collect solder as hazardous waste.

Violation Description:

Failure to meet the following conditions of satellite accumulation regulations:

• Accumulate up to 55 gallons of hazardous waste or one quart of acute hazardous waste at or near the initial point of accumulation which was under the control of the operator.

• Total time hazardous waste can be accumulated onsite in any generator accumulation area is one year, i.e., the combined accmulation time at a satellite accumulation point and at a 90/180/270 accumulation area (depending on size of generator and distance transported), whichever comes first.

• The generator complies with section 66265.171, 66265.172, and 66265.173(a).

• The container must be clearly marked with the initial date that hazardous waste is first placed in the container and labelled with the words "Hazardous Waste" including specified information

• Container must be labelled with the date the satellite accumulation limit is reached and moved within three days after reaching the 55 gallon (or one quart) limit to a "90 day" accumulation area

• 55 gallons (or one quart of acute hazardous waste) of waste per process may be accumulated

Feature Info Url: https://semspub.epa.gov/work/09/100018396.pdf
Feature Info Url Desc: EPA Five Year Review
Site Feature Class: 5
Site Feature Type: Current Ground Boundary
Site Feature Name: TRW Operable Unit
Site Feature Description: The former TRW Microwave site is located in a topographically flat area of the Santa Clara Valley. Between 2001 and 2003, a portion of the building was demolished and a new structure was constructed. TRW assembled and tested microwave and semiconductor components between 1968 and 1993. TRW used TCE and several other industrial solvents and hazardous compounds. TRW stored waste solvents (mostly TCE) in an underground storage tank from 1970 through 1982. An in-ground, three-stage, ammonia gas acid neutralization system was operated from 1968 to 1984. An aboveground acid neutralization system was operated from 1984 to 2001. Between 1983 and 1986, several subsurface investigations were conducted in the vicinity of the former areas of the underground storage tank, and the acid neutralization systems. The investigations identified VOCs as the only contaminants of concern at the TRW Site, and the former underground storage tank area as the only source of VOCs impacting groundwater.
Site Feature Name: TRW Operable Unit

Calenviroscreen 3 Score: 36-40%
Calenviroscreen 4 Score: 35-40%
File Location: Regional Board
Site History:

The oversight of this case was transferred from the Regional Water Board to the US EPA Region 9 on August 7, 2014. The US EPA Remediation project Manager is Ms. Melanie Morash. Her telephone number is (415) 972-3050, and her e-mail address is morash.melanie@epa.gov. Background The site is located at 825 Stewart Drive near the intersection of Wolfe Road and Arques Avenue in Sunnyvale. Land use in the area is mixed, predominantly consisting of industrial/commercial properties, as well as an adjacent private school, and homes farther to the north. From 1968 to 1974, Aertech Industries (Aertech) assembled and tested microwave and semiconductor components at the site. In 1974, TRW Inc. (TRW) acquired the site from Aertech and in 1987 FEI Microwave bought the site from TRW. In December 2002, TRW merged with Northrop Grumman Corporation and changed its name to Northrop Grumman Space & Mission Systems Corp. (Northrop Grumman). In 2004, the property was purchased by Pacific Landmark. Northrop Grumman remains responsible for site investigation and cleanup. During operations at the site between 1968 and 1993, trichloroethene (TCE) and several other industrial solvents, composed mainly of TCE, was stored in an underground storage tank (UST) on the site from 1970 until 1982. The Water Board is the lead regulatory agency overseeing soil and groundwater investigation and cleanup activities at this Site. Site Investigation In 1983, TRW initiated an investigation of potential soil and groundwater contamination at the site. Also that year, the UST was removed and soil in the immediate area was excavated and hauled off site. Between 1983 and 1986, several subsurface investigations conducted in the vicinity of the former UST location and associated piping revealed elevated levels of solvents, including TCE, in the groundwater and identified the former UST location as the only site source of those solvents. A comprehensive soil investigation was conducted in 1988 to delineate the extent of soil contamination in the area of the former UST. Contamination from two other nearby VOC release sites (the former AMD site at 901/902 Thompson Place and the Philips site at 811East Arques Avenue) have commingled with the TRW plume. The commingled plume extends north to U.S. Highway 101, west to San Juan Drive and east to San Miguel Avenue. The commingled plume is managed as “The Companies Offsite Operable Unit.” Shallow groundwater beneath the site is not currently used for drinking. The City of Sunnyvale supplies drinking water to the site and its vicinity. Site Cleanup Activity In 1984, TRW excavated approximately 120 additional cubic yards of soil that had not been removed when the UST was removed in 1983. In 1985, TRW implemented a groundwater extraction and treatment system to reduce groundwater solvent concentrations and maintain hydraulic control of the groundwater plume to prevent it from migrating to other parts of the site or off site. Extracted groundwater was treated on site via an air stripper to remove solvents. Treated groundwater was discharged to the storm drain under a Water Board discharge permit. The system operated through 2001. About 92.5 million gallons of groundwater was extracted and about 3,100 pounds of TCE was removed. In 1993, TRW installed a soil vapor extraction (SVE) system to remove solvents from the onsite soil. Following Water Board approval, the SVE system was shut down in 1996, as the cleanup goal for soil had been met. In 1999, TRW determined that the groundwater extraction and treatment system was no longer effectively removing solvent mass from the subsurface. TRW implemented an enhanced anaerobic biodegradation (EAB) treatment at the site in October 2000 into the affected groundwater at the former UST location. The intent of the EAB treatment was to increase the natural biodegradation rate of TCE to harmless byproducts. EAB treatment involves injection ofnutrients for the naturally occurring microbes in subsurface soil and groundwater to produce hydrogen which breaks down TCE into non-toxic or harmless byproducts. Since the EAB treatment began, the rate of TCE degradation has dramatically increased in all wells within the application area. TCE has been reduced by 99% within the source area, such that TCE levels within the source area are now lower than in up-gradient site boundary wells. Based on the success of the EAB treatment and the high rate of natural attenuation occurring at the site, the Water Board approved complete shut down of the groundwater extraction and treatment system in late 2001. Based on the initial EAB success, the EAB treatment area was expanded in 2005 to include additional site groundwater down-gradient of the former source area. Next Steps Northrop Grumman will continue monitoring the effectiveness of the EAB treatment, as measured by the ongoing increased biodegradation rate of TCE and its degradation products, and will also continue monitoring overall site groundwater quality into foreseeable future until Water Board-established cleanup standards for this site are met. Water Board Oversight Process The Water Board oversees more than 3,000 site cleanup cases in the Bay Area, including more than 2,000 leaking fuel tank cases. Water Board staff direct investigation or cleanup work and set cleanup standards under Water Code authority. Responsible parties (e.g., past operators) propose specific measures, perform the actual work, and submit technical reports documenting task completion. As part of this process, we circulate key documents, such as draft cleanup plans, to interested persons and provide an opportunity for comment on these documents. Interested persons include other agencies, local officials, non-profit organizations, and interested landowners and residents/occupants in the site vicinity.

Site History:

The oversight of this case was transferred from the Regional Water Board to the US EPA Region 9 on August 7, 2014. The US EPA Remediation project Manager is Ms. Melanie Morash. Her telephone number is (415) 972-3050, and her e-mail address is morash.melanie@epa.gov.

Background
The site is located at 825 Stewart Drive near the intersection of Wolfe Road and Arques Avenue in Sunnyvale. Land use in the area is mixed, predominantly consisting of industrial/commercial properties, as well as an adjacent private school, and homes farther to the north. From 1968 to 1974, Aertech Industries (Aertech) assembled and tested microwave and semiconductor components at the site. In 1974, TRW Inc. (TRW) acquired the site from Aertech and in 1987 FEI Microwave bought the site from TRW.

In December 2002, TRW merged with Northrop Grumman Corporation and changed its name to Northrop Grumman Space & Mission Systems Corp. (Northrop Grumman). In 2004, the property was purchased by Pacific Landmark. Northrop Grumman remains responsible for site investigation and cleanup.

During operations at the site between 1968 and 1993, trichloroethene (TCE) and several other industrial solvents, composed mainly of TCE, was stored in an underground storage tank (UST) on the site from 1970 until 1982. The Water Board is the lead regulatory agency overseeing soil and groundwater investigation and cleanup activities at this Site.

Site Investigation
In 1983, TRW initiated an investigation of potential soil and groundwater contamination at the site. Also that year, the UST was removed and soil in the immediate area was excavated and hauled off site. Between 1983 and 1986, several subsurface investigations conducted in the vicinity of the former UST location and associated piping revealed elevated levels of solvents, including TCE, in the groundwater and identified the former UST location as the only site source of those solvents. A comprehensive soil investigation was conducted in 1988 to delineate the extent of soil contamination in the area of the former UST.

Contamination from two other nearby VOC release sites (the former AMD site at 901/902 Thompson Place and the Philips site at 811East Arques Avenue) have commingled with the TRW plume. The commingled plume extends north to U.S. Highway 101, west to San Juan Drive and east to San Miguel Avenue. The commingled plume is managed as "The Companies Offsite Operable Unit."

Shallow groundwater beneath the site is not currently used for drinking. The City of Sunnyvale supplies drinking water to the site and its vicinity.

Site Cleanup Activity
In 1984, TRW excavated approximately 120 additional cubic yards of soil that had not been removed when the UST was removed in 1983. In 1985, TRW implemented a groundwater extraction and treatment system to reduce groundwater solvent concentrations and maintain hydraulic control of the groundwater plume to prevent it from migrating to other parts of the site or off site.

Extracted groundwater was treated on site via an air stripper to remove solvents. Treated groundwater was discharged to the storm drain under a Water Board discharge permit. The system operated through 2001. About 92.5 million gallons of groundwater was extracted and about 3,100 pounds of TCE was removed.

In 1993, TRW installed a soil vapor extraction (SVE) system to remove solvents from the onsite soil. Following Water Board approval, the SVE system was shut down in 1996, as the cleanup goal for soil had been met.

In 1999, TRW determined that the groundwater extraction and treatment system was no longer effectively removing solvent mass from the subsurface. TRW implemented an enhanced anaerobic biodegradation (EAB) treatment at the site in October 2000 into the affected groundwater at the former UST location.

The intent of the EAB treatment was to increase the natural biodegradation rate of TCE to harmless byproducts. EAB treatment involves injection of nutrients for the naturally occurring microbes in subsurface soil and groundwater to produce hydrogen which breaks down TCE into non-toxic or harmless byproducts.

Since the EAB treatment began, the rate of TCE degradation has dramatically increased in all wells within the application area. TCE has been reduced by 99% within the source area, such that TCE levels within the source area are now lower than in up-gradient site boundary wells. Based on the success of the EAB treatment and the high rate of natural attenuation occurring at the site, the Water Board approved complete shut down of the groundwater extraction and treatment system in late 2001. Based on the initial EAB success, the EAB treatment area was expanded in 2005 to include additional site groundwater down-gradient of the former source area.

Next Steps
Northrop Grumman will continue monitoring the effectiveness of the EAB treatment, as measured by the ongoing increased biodegradation rate of TCE and its degradation products, and will also continue monitoring overall site groundwater quality into foreseeable future until Water Board-established cleanup standards for this site are met.

Water Board Oversight Process
The Water Board oversees more than 3,000 site cleanup cases in the Bay Area, including more than 2,000 leaking fuel tank cases. Water Board staff direct investigation or cleanup work and set cleanup standards under Water Code authority. Responsible parties (e.g., past operators) propose specific measures, perform the actual work, and submit technical reports documenting task completion.

As part of this process, we circulate key documents, such as draft cleanup plans, to interested persons and provide an opportunity for comment on these documents. Interested persons include other agencies, local officials, non-profit organizations, and interested landowners and residents/occupants in the site vicinity.

Comments:			

This is the date the site was first listed AWP pursuant to Section 25356. Groundwater and soil contain various VOCs. People who touch or accidentally ingest contaminated groundwater or soil may be at risk. The deep aquifer, used as a drinking source, is not contaminated; however, the shallow aquifer is contamina- ted. There are some agricultural wells that could act as conduits between the shallow contaminated aquifer and the deep aquifer.

Regulated Programs

EI ID: 10687162 **EI Description:** Hazardous Waste Generator

Violations

Violation Date: 04/26/2018 **Violation Source:** CERS
Violation Program: HW **Violation Division:** Sunnyvale Department of Public Safety
Citation: 22 CCR 23 66273.35 - California Code of Regulations, Title 22, Chapter 23, Section(s) 66273.35
Violation Notes:

Returned to compliance on 05/29/2018. Waste batteries on site greater than one year.

Violation Description:

Failure to accumulate universal waste for one year or less and to demonstrate the length of time that the universal waste has been accumulated from the date it became a waste or was received.

Evaluations

Eval Date: 04/03/2017
Violations Found: No
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Sunnyvale Department of Public Safety
Eval Program: HW
Eval Source: CERS
Eval Notes:

One solder station- Small quantity solder wipe and flux waste, less than 1 gallon at the time of inspection.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 09/09/2021
Violations Found: No
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Sunnyvale Department of Public Safety
Eval Program: HW
Eval Source: CERS
Eval Notes:

Hazardous waste is properly labeled. Solder waste is collected at the point of generation. Discussed housekeeping of solder areas. Accumulation times - OK. Manifests - OK. Log documenting when manifests are sent to DTSC are maintained. No signature obtained due to COVID-19 protocols. Verbal consent to inspect granted.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 05/06/2019
Violations Found: No
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Sunnyvale Department of Public Safety
Eval Program: HW
Eval Source: CERS
Eval Notes:

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB

Hazardous waste is properly labeled and secondarily contained. Time limits- OK Containers- OK Training- OK Manifests- OK. Maintained remotely at a different facility.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Date: 04/26/2018
Violations Found: Yes
Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Sunnyvale Department of Public Safety

Feature Info Url: https://semspub.epa.gov/work/09/100018396.pdf
Feature Info Url Desc: EPA Five Year Review
Site Feature Class: 5
Site Feature Type: Current Ground Boundary
Site Feature Name: AMD Operable Unit
Site Feature Description: Site boundary includes the location of two former large, low-rise industrial buildings connected by a hallway (formerly 901 and 902 Thompson Place) and extends east to DeGuigne Drive. The AMD site includes seven other commercial buildings. AMD manufactured printed circuit boards and semiconductors continuously between 1969 and 1992. AMD used trichloroethylene (TCE) and other industrial solvents for cleaning and degreasing, although TCE use reportedly ceased around 1979. Acids were used for etching, and caustics were used for acid neutralization. Acid neutralization systems, including inground sumps, were used at both AMD buildings between 1969 and 1984. Related hazardous wastes generated from these various operations were stored on-site. Additional studies of groundwater contamination in the 1980s identified chlorinated volatile organic compounds (VOCs), primarily TCE, cis-1,2-dichloroethylene (cDCE) and vinyl chloride, in the upper 65 feet of soil under the AMD Site.

Feature Info Url Desc: EPA Five Year Review
Site Feature Class: 5
Site Feature Type: Current Ground Boundary
Site Feature Name: AMD 915 Site
Site Feature Description: The Site comprises approximately 25 acres of relatively flat land at approximately 40 feet above sea level, in Sunnyvale, California. Land use in the area is both residential and commercial. AMD operated a facility for manufacturing of electrical components. Chemicals historically used by AMD included solvents and corrosives. The primary on-site source of TCE in groundwater appears to have been a leak from one of the tanks on neutralization system. AMD and related entities utilized the Site as a semiconductor fabrication and a research and development facility from 1974 until approximately 2015. Manufacturing at the site ceased in 2009. Site operations affected the shallow groundwater quality at the Site and contributed to regional comingled groundwater contamination in the area.

Returned to compliance on 02/14/2018. Please submit your Chemical inventory and emergency response plan into CERS. All required elements must be submitted to CERS annually.

Violation Description:

Failure to complete and electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.

Violations

Violation Date: 12/17/2020 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Sunnyvale Department of Public Safety
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Notes:

Returned to compliance on 12/31/2021. Second citation - Multiple 55-gallon drums from March 31, 2018 are stored on site.

Violation Description:

Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met:
(1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms.

(2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f).

(3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.

Violations

Violation Date: 05/29/2014 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Sunnyvale Department of Public Safety
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Notes:

Returned to compliance on 06/27/2014.

Violation Description:

Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the

generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violations

Violations

Violation Date: 03/28/2023
Violation Source: CERS
Violation Program: HW
Violation Division: Sunnyvale Department of Public Safety
Citation: 22 CCR 23 66273.34 - California Code of Regulations, Title 22, Chapter 23, Section(s) 66273.34
Violation Notes:

Returned to compliance on 06/14/2023. Used batteries were incorrectly labeled as hazardous waste (vs. universal waste).

Violation Description:

Failure to label or mark each individual or container or the designated area of universal waste as required. 1) Waste batteries shall be marked with "Universal Waste-Battery(ies)". 2) Mercury containing equipment shall be marked with "Universal Waste -Mercury-Containing Equipment". 3) Lamps shall be marked with "Universal Waste-Lamp(s)". 4)Each electronic devices or the container or the designated area shall be marked with "Universal Waste-Electronic Device(s)". 5) Each CRTs or the container or the designated area shall be marked with "Universal Waste-CRT(s)". 6) CRT glass or the designated area shall be marked with "Universal Waste-CRT glass".

Violations

Violation Date: 07/20/2020
Violation Source: CERS
Violation Program: HMRRP
Violation Division: Sunnyvale Department of Public Safety

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB

Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Notes:

Returned to compliance on 08/20/2020. The business failed to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material including familiarity with the emergency response plan or failure to document and maintain training records for a minimum of three years.

Violation Description:

Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.

Violations

Violation Date: 07/08/2021 ***Violation Source:*** CERS

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB

Violation Notes:

Returned to compliance on 08/20/2020. Used filter container, and safety can containing solvent waste do not have the necessary labelling present.

Violation Description:

Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violations

Violation Date: 07/20/2020
Violation Source: CERS
Violation Program: HW
Violation Division: Sunnyvale Department of Public Safety
Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Notes:

Returned to compliance on 08/20/2020. Hazardous waste (used filter storage) is not closed when not in use.

Violation Description:

Failure to meet the following container management requirements:
(a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste.
(b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.

Violations

Remedy Component: No Action
Media: Soil
Federal Facility: No
Superfund Alt. Agreement: No
Operable Unit No: 01
Sequence ID: 1

Actual Completion Date: 8/26/1991 4:00:00 AM
Fiscal Year: 1991
NPL Status: Currently on the Final NPL
Action Type: Record of Decision
Remedy Component: Air Stripping (P&T, exsitu)
Media: Groundwater
Federal Facility: No
Superfund Alt. Agreement: No
Operable Unit No: 01
Sequence ID: 1

Actual Completion Date: 8/26/1991 4:00:00 AM
Fiscal Year: 1991
NPL Status: Currently on the Final NPL
Action Type: Record of Decision
Remedy Component: Carbon Adsorption (liquid phase, P&T, exsitu)
Media: Groundwater
Federal Facility: No
Superfund Alt. Agreement: No
Operable Unit No: 01
Sequence ID: 1

Filename:			
Comments:			

Site listed in 1989 Bond Expenditure Plan as a RWQCB refer- ral site. Advanced Micro Devices conducts remeidal activi- ties under the direction of the RWQCB. Since the RWQCB is acting as the lead agency, DHS has no plans to spend Bond funds at this site. The responsible party will pay all costs associated with remedial investigations and cleanup. Groundwater contains various VOCs. The majority of the soil, which was contaminated with organic solvents, has been removed. If the contamination plume migrates to the munici- pal wells, people who touch or drink the water may be at risk.

RAT Def: Provides for oversight of responsible party response action for feasibility Study (FS), including all activities for monitoring and supervising the performance of the responsible parties to determine whether such performance is consistent with the requirements of the administrative orders on consent, unilateral administrative orders, consent decrees, judicial decrees, information agreements, and compliance schedules. The feasibility study is a study of a hazardous waste state to: (1) evaluate alternative remedial actions from technical, environmental, and cost effectiveness perspectives; (2) recommend the cost-effective remedial action; and (3) prepare a conceptual design , a cost estimate for budgetary purposes, and a preliminary construction schedule.

Facility Project Sub Type:
Calenviroscreen 3 Score: 31-35%
Calenviroscreen 4 Score: 35-40%
File Location: Regional Board
Site History:

The oversight of this case was transferred from the Regional Water Board to the US EPA Region 9 on August 7, 2014. The US EPA Remediation project Manager is Ms. Melanie Morash. Her telephone number is (415) 972-3050 and her email is morash.melanie@epa.gov. The Site was formerly identified as two properties: 901 Thompson Place and 902 Thompson Place. These properties have been re-developed and now have a single address: 875 East Arques Avenue, Sunnyvale, California (see site location map). Land use in this area is primarily industrial and commercial. The 901-902 Thompson Place property was formerly occupied by Advanced Micro Devices, Inc. (AMD) to manufacture integrated semiconductor circuits between 1969 and 1992. Two below-ground acid neutralization system (ANS) tank vaults were located at the northern and southern ends of the 901 and 902 Thompson Place buildings, respectively. The ANS tanks for both 901 and 902 Thompson Place were constructed of coated concrete and were used to contain acidic industrial wastewater that was neutralized by adding caustics before discharging to the sanitary sewer. The wastewater also contained volatile organic compounds (VOCs). Soil and groundwater investigations were conducted by AMD in 1983 and 1984 to assess the impact of releases from both ANS struc¬tures. The results of these investigations indicated the presence of VOCs in soil and groundwater samples collected from the area near the ANS structures. Both ANS's and surrounding VOC-affected soils were removed between 1983 and 1992. Groundwater extraction and treatment was conducted from 1983 until December 2002. In situ biological treatment of VOCs in groundwater and saturated soil has been conducted since 2002 and is ongoing. Soil impacted primarily by VOCs was excavated from source areas ANS-901 and ANS-902 over three separate excavation events. The relatively low VOC concentrations in monitoring wells within the uppermost water bearing zone (approximately 10 to 20 feet bgs), where TCE concentrations have generally been less than 100 g/L down-gradient of the former ANS-901 source area, suggest that no substantial source for TCE exists in unsaturated zone soil at the Site. In 2007, Summit Commercial Properties, Inc. (Summit) the current owner of the Site, demolished the building and built a rental storage facility in its place.

File Location: Regional Board
Site History:

The site is located at 915 DeGuigne Drive near the intersection of DeGuigne and Duane Avenue in Sunnyvale. Land use in this area is residential north of Duane Avenue, and primarily industrial and commercial south, west, and east of the site. The site has been redeveloped into residential townhomes with vapor intrusion mitigation systems. Advanced Micro Devices, Inc. (AMD) operated a semiconductor fabrication and research and development facility at the site from 1974 until 2003, when AMD transferred ownership of the property to Spansion LLC, a joint venture of AMD and Fujitsu LTD. Spansion specializes in flash memory devices and continues to operate at the site. Trichloroethene (TCE) is a common chlorinated solvent used in industrial processes such as degreasing, and was used during manufacturing processes at the site in the 1970's. Site Investigation: Chemical releases from underground tanks were discovered in 1981. Volatile organic compounds (VOCs) were detected in soil and groundwater samples collected from the vicinity of the underground tank leaks in 1982. The depth to groundwater is approximately 10 feet below ground surface beneath the site. TCE and cis-1,2-dichloroethene (DCE) and vinyl chloride are the primary VOCs of concern in the site subsurface that require cleanup. DCE and vinyl chloride are produced when bacteria in the soil degrades TCE. Eventually, DCE and vinyl chloride can be broken down by bacteria to carbon dioxide and chloride, which are harmless compounds that naturally occur in groundwater. VOC releases from other nearby industrial facilities have also contributed to groundwater contamination in this area. The groundwater plume from this site extends north to Duane Avenue, west to San Juan Drive and east to San Pedro Avenue. A baseline public health assessment was completed for the site in 1990 under Water Board oversight. The assessment concluded that the site did not pose an unacceptable risk provided that groundwater was not used for drinking or domestic purposes. The shallow groundwater beneath the site flows in north to northeasterly direction and is not used for drinking or other purposes. The City of Sunnyvale supplies drinking water to the site and its vicinity. Site Cleanup: AMD removed the leaking underground storage tanks in 1981 and 1982. Two large excavations associated with the removal of the underground tanks and affected soils were conducted between 1981 and 1983. Approximately 5,870 cubic yards of soil was removed. Three minor excavations associated with the removal of other equipment at the site were conducted in 1986 and 1987. AMD installed a groundwater extraction and treatment system in 1982 to mitigate the migration of VOCs in groundwater from the site. Concentrations of chemicals associated with onsite releases have decreased considerably as a result of groundwater extraction, but low concentrations of VOCs remain above cleanup standards. Groundwater extraction and treatment is ongoing. Next Steps: Alternative groundwater treatment technologies may be considered in the future to expedite groundwater cleanup. Groundwater treatment, monitoring and reporting will continue into the foreseeable future until Water Board-established cleanup standards for this site are met.

NOTIFY PRIOR TO DEVELOPMENT
NOTIFY PRIOR TO SUBSURFACE WORK
ONLY EXTRACTION OF GROUNDWATER FOR SITE REMEDIATION PERMITTED
PUBLIC OR PRIVATE SCHOOL FOR PERSONS UNDER 21 PROHIBITED
Future Land Use:
Cleanup Oversight Agencies: SAN FRANCISCO BAY RWQCB (REGION 2) (LEAD) - CASE #: 43S0836
CASE MANAGER: KATHERINE WARD
Cleanup History Link: https://geotracker.waterboards.ca.gov/profile_report_include?global_id=SL720051206&tabname=regulatoryhistory
Site History:

The site is located at 915 DeGuigne Drive near the intersection of DeGuigne and Duane Avenue in Sunnyvale. Land use in this area is residential north of Duane Avenue, and primarily industrial and commercial south, west, and east of the site. The site has been redeveloped into residential townhomes with vapor intrusion mitigation systems.

Advanced Micro Devices, Inc. (AMD) operated a semiconductor fabrication and research and development facility at the site from 1974 until 2003, when AMD transferred ownership of the property to Spansion LLC, a joint venture of AMD and Fujitsu LTD. Spansion specializes in flash memory devices and continues to operate at the site. Trichloroethene (TCE) is a common chlorinated solvent used in industrial processes such as degreasing, and was used during manufacturing processes at the site in the 1970's.

Site Investigation:
Chemical releases from underground tanks were discovered in 1981. Volatile organic compounds (VOCs) were detected in soil and groundwater samples collected from the vicinity of the underground tank leaks in 1982. The depth to groundwater is approximately 10 feet below ground surface beneath the site. TCE and cis-1,2-dichloroethene (DCE) and vinyl chloride are the primary VOCs of concern in the site subsurface that require cleanup. DCE and vinyl chloride are produced when bacteria in the soil degrades TCE. Eventually, DCE and vinyl chloride can be broken down by bacteria to carbon dioxide and chloride, which are harmless compounds that naturally occur in groundwater.

VOC releases from other nearby industrial facilities have also contributed to groundwater contamination in this area. The groundwater plume from this site extends north to Duane Avenue, west to San Juan Drive and east to San Pedro Avenue. A baseline public health assessment was completed for the site in 1990 under Water Board oversight. The assessment concluded that the site did not pose an unacceptable risk provided that groundwater was not used for drinking or domestic purposes. The shallow groundwater beneath the site flows in north to northeasterly direction and is not used for drinking or other purposes. The City of Sunnyvale supplies drinking water to the site and its vicinity.

Site Cleanup:
AMD removed the leaking underground storage tanks in 1981 and 1982. Two large excavations associated with the removal of the underground tanks and affected soils were conducted between 1981 and 1983. Approximately 5,870 cubic yards of soil was removed. Three minor excavations associated with the removal of other equipment at the site were conducted in 1986 and 1987.

AMD installed a groundwater extraction and treatment system in 1982 to mitigate the migration of VOCs in groundwater from the site. Concentrations of

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB

chemicals associated with onsite releases have decreased considerably as a result of groundwater extraction, but low concentrations of VOCs remain above cleanup standards. Groundwater extraction and treatment is ongoing.

Next Steps:
Alternative groundwater treatment technologies may be considered in the future to expedite groundwater cleanup. Groundwater treatment, monitoring and reporting will continue into the foreseeable future until Water Board-established cleanup standards for this site are met.

Facility Project Sub Type:
Calenviroscreen 3 Score: 36-40%
Calenviroscreen 4 Score: 35-40%
File Location: Regional Board
Site History:

The oversight of this case was transferred from the Regional Water Board to the US EPA Region 9 on August 7, 2014. The US EPA Remediation project Manager is Ms. Melanie Morash. Her telephone number is (415) 972-3050, and her e-mail address is morash.melanie@epa.gov. Background: The site includes the properties of 811 East Arques Avenue, 440 North Wolfe Road, and 815 Stewart Drive, near the intersection of Wolfe Road and Arques Avenue in Sunnyvale (see the attached site location map). Land use in the area is a mixture of commercial and light industrial. Philips Semiconductors has operated a semiconductor fabrication facility at the site since the 1980s. Philips used volatile organic compounds (VOCs) in its manufacturing processes. As a result, the groundwater under the site is impacted with VOCs. Lowe's recently purchased the 811 East Arques property from Philips and built a hardware store on this parcel. Philips recently sold 440 North Wolfe Road and 815 Stewart Drive properties to real estate investors. The Water Board is the lead regulatory agency overseeing soil and groundwater investigation and cleanup activities at this site. Site Investigation: Site investigations began in 1982 to determine the vertical and horizontal extent of the contaminated area. Groundwater beneath the site is approximately 10 to 15 feet below ground surface. VOC-contaminated groundwater from this site and from two other nearby VOC release sites (the former AMD site at 901/902 Thompson Place and the former TRW Microwave site at 825 Stewart Drive) have commingled with the Philips plume. The commingled plume extends north to Duane Avenue, west to San Juan Drive and east to San Miguel Avenue. The commingled plume is managed as "The Companies Offsite Operable Unit." A risk assessment report prepared for the Lowe's parcel indicates that VOCs in groundwater do not pose health risks to the occupants of the Lowe's property. In addition, several rounds of indoor air testing have been conducted at a nearby high school and an elementary school to determine if VOCs in the groundwater plume are entering the buildings at these schools. Test results have indicated no indoor air intrusion at these schools. Groundwater is not used for drinking water or any other domestic purpose. The City of Sunnyvale supplies drinking water to the site and the surrounding areas. Cleanup Activities: Philips implemented source removal activities in 1982 and 1987, which significantly reduced the onsite concentrations of VOCs. A soil vapor extraction system was then used to remediate remaining soils until 1996, when the concentrations dropped significantly. Further investigations have shown that chemicals have been effectively removed from the shallow soils at the site. Treatment for impacted groundwater began in 1985, and continues today. The groundwater is extracted by a series of wells and trenches, and treated using ozone oxidation and other remedial technologies. The treatment process has significantly reduced contaminants at the site over the last two decades. Next Steps: Philips will continue its established groundwater remediation program to cleanup the remaining groundwater contamination. VOC concentrations in groundwater are monitored regularly, and reports are prepared and submitted annually to the Water Board for review. Treatment and monitoring of the VOC-impacted groundwater will continue into the foreseeable future until Water Board-established cleanup standards for this site are met.

Citation: 22 CCR 15 66265.177 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.177
Violation Notes:

Returned to compliance on 03/17/2015.

Violation Description:

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB

Failure to ensure incompatible waste and/or materials are not placed or stored in the same container or nearby or into an unwashed container, which previously contained incompatible waste and/or materials, so that it does not potentially result in the following:
1) Generate extreme heat or pressure, fire or explosion, or violent reaction;
2) Produce uncontrolled toxic mists, fumes, dusts, or gases in sufficient quantities to threaten human health or the environment;
3) Produce uncontrolled flammable fumes or gases in sufficient quantities to pose a risk of fire or explosions;
4) Damage the structural integrity of the device or facility containing the waste; or
5) Through other like means threaten human health or the environment.

Violations

Violation Date: 05/30/2018 ***Violation Source:*** CERS
Violation Program: HW ***Violation Division:*** Sunnyvale Department of Public Safety
Citation: HSC 6.5 25123.3(h)(2) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(2)
Violation Notes:

Returned to compliance on 06/01/2018. Signed copies of manifests for the following manifests were not available on-site at the time of inspection: 001651824PSC from 9/14/2017); 001705393 PSC from 11/17/2017; 001775369PSC from 2/16/2018.

Violation Description:

Failure to determine the status of any hazardous waste if a signed copy of the manifest isn't received within 35 days of the date the waste was accepted by the initial transporter and/or to submit an Exception Report to DTSC if a signed copy of the manifest isn't received within 60 days of the date the waste was accepted by the initial transporter.

Violations

Violation Date: 08/09/2022 ***Violation Source:*** CERS
Violation Program: APSA ***Violation Division:*** Sunnyvale Department of Public Safety
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Notes:

Returned to compliance on 01/25/2023. Employee conducting monthly inspections is not familiar with the SPCC plan and has not received any SP001 training (SP001-03 is the industry standard referenced in the SPCC plan).

Violation Description:

Failure to provide the following training to all oil-handling personnel:

1. Operation and maintenance of equipment to prevent discharges.

2. Discharge procedure protocols.

3. Applicable pollution control laws, rules, and regulations.

4. General facility operations.

5. Contents of the SPCC Plan.

Violations

Violation Date: 08/09/2022 ***Violation Source:*** CERS
Violation Program: APSA ***Violation Division:*** Sunnyvale Department of Public Safety
Citation: HSC 6.67 25270.4.5 (a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5 (a)
Violation Notes:

Returned to compliance on 09/12/2022. Second Notice of Violation - The SPCC plan stored on site was last certified 8/23/2016.

Violation Description:

Failure to complete a review and evaluation of the SPCC Plan at least once every five years, document the completion of the review, and sign a statement as to whether the SPCC Plan will be amended.

This is the date the site was first listed AWP pursuant to Section 25356. A neutralization unit was cleaned, rinsed and dismantled. An unspecified amount of hazardous waste was removed. Site considered certified based on August 1985 Auditor General's Report. Work was performed with oversight by SMP. Site is on 1989 Bond Expenditure Plan. Based on this status, the site is "decertified" and the previous cert is considered a removal action. SITE NOT LOCATED ON 90/91 BOND AWP. SITE STATUS STILL NEEDS TO BE DET.

Waste Code Description: SILVER

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Past Use that Caused Contam: PHOTOGRAPHIC PROCESSING
Potential Media Affected: OTHER GROUNDWATER AFFECTED (USES OTHER THAN DRINKING WATER)
Potential Contamin of Concern:

FREON 113
VOLATILE ORGANICS (8260B VOCS)

Site History:

Between 1980 and 1983, the former Inprint Corporation operated and maintained a 1000-gallon underground storage tank (UST) for temporary storage of waste solvents including trichloroethylene (TCE), photochemicals, glycerin, isopropyl alcohol, and ink sludge. By November 1984, Inprint had removed the UST with approval from RWQCB. Groundwater sampling showed elevated levels of VOCs in groundwater. A groundwater extraction system was started in 1990 and suspended in March 2006. An enhanced anaerobic biodegradation treatment began concurrently with the suspension of the extraction system. The Site was previously investigated and remediated under oversight by RWQCB and closed in 1997. In 1993 the Site was

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB

reopened by RWQCB for investigation and cleanup in conjunction with the 999 Arques Corporation Site, which is still ongoing.

Status: REFER: RWQCB

Area Name:
Area Link:
Sub Area:
Sub Area Link:
Document Type: Phase 1 Addendum
Date Completed: 1/5/2017
Comments: DTSC performed a site screening to determine whether any release of hazardous substances or wastes have occurred at the site that require corrective actions. Investigation and remediation activities at the site have been overseen by the Regional Water Quality Control Board (RWQCB) since July 1984. The main contaminants of concern that have been identified on the site are: trichloroethylene; tetrachloroethylene; 1,2-dichloroethene; TCA; and freon. 999 Arques Corporation assumed full responsibility for meeting all cleanup requirements at the site. RWQCB is currently jointly managing the remediation of the site with the cleanup at the 999 Arques Corporation site.

Site History:

968 Stewart Dr. was the location of former InPrint Corporation facility that had a waste underground storage tank (UST) that stored tetrachloroethene (PCE), benzene and other chemicals. 970 Stewart Dr. location of former TRW facility based on old site plans. The Property is downgradient of 999 Arques site and are located in Subunit 2 of the Stewart Drive Operable Unit (SDOU). List of past site cleanup requirement Orders associated with the Property: -Order No 93-136 - Sobrato Development Co. named as discharger along with 999 Arques Corporation (999 Arques) due to the groundwater plume from 999 Arques -Order No. 96-133 and 99-097 names both 999 Arques, Sobrato and Inprint as discharges but 999 Arques assumed full responsibility for completing cleanup requirements. -Order No. 2012-0077 rescinds 99-097 and only 999 Arques is named as discharger and assumes responsibility for all cleanup for 995-999 Arques Ave., 1077 East Arques Ave., and 968-970 Stewart Dr. Current and past property owners and operators (including Sobrato and Inprint) are named as "qualified" discharges. Order R2-2012-0077 (Order) names the discharger/responsible party as 999 Arques. Currently 999 Arques monitors groundwater monitoring wells located at 968/970 Stewart Drive (the Property). The Regional Water Board's September 26, 2017, letter (Letter) required 999 Arques to submit a vapor intrusion (VI) workplan for Subunits 1, 2 and 5 of the SDOU to delineate the extent of the soil gas plume in all directions from Subunit 1, 999 Arques site # 43S0229. 999 Arques has submitted the following VI reports: • March 29, 2018 Revised VI Assessment Sampling Report • August 24, 2018, VI Assessment Sampling Report (August 2018 Report) Based on the soil gas contamination found in Subunit 2 during 999 Arques' investigation. The Regional Water Board required the former operator (InPrint), currently ARC Document Solutions, LLC (ARC) to submit a vapor intrusion assessment workplan. In 2019, we approved a workplan to collect sub•slab soil vapor and subsurface soil vapor sampling to delineate the extent of volatile organic compounds (VOCs), primarily PCE and trichloroethene (TCE) to evaluate potential VI risks to current occupants within the commercial building at 968/970 Stewart. The vapor intrusion assessment has be completed. It appears that soil gas contamination consists of volatile organic compounds (VOCs) associated with a historic UST release from the historic operations of the InPrint Corporation facility. The data indicates additional assessment and the case was reopened on February 20, 2020 with ARC as the responsible party. The Water Board approved the December 31, 2019, VI Investigation Report and requested an additional site characterization workplan by June 3, 2020. Shallow soil vapor results collected in 2018 in February and July. July had the highest concentrations: PCE = 10,400 ug/m3 TCE = 7.360 ug/m3 Sub-slab and indoor air sampling is pending by the former operator.

Site History:

968 Stewart Dr. was the location of former InPrint Corporation facility that had a waste underground storage tank (UST) that stored tetrachloroethene (PCE), benzene and other chemicals. 970 Stewart Dr. location of former TRW facility based on old site plans. The Property is downgradient of 999 Arques site and are located in Subunit 2 of the Stewart Drive Operable Unit (SDOU). List of past site cleanup requirement Orders associated with the Property:

-Order No 93-136 - Sobrato Development Co. named as discharger along with 999 Arques Corporation (999 Arques) due to the groundwater plume from 999 Arques
-Order No. 96-133 and 99-097 names both 999 Arques, Sobrato and Inprint as discharges but 999 Arques assumed full responsibility for completing cleanup requirements.

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB

-Order No. 2012-0077 rescinds 99-097 and only 999 Arques is named as discharger and assumes responsibility for all cleanup for 995-999 Arques Ave., 1077 East Arques Ave., and 968-970 Stewart Dr. Current and past property owners and operators (including Sobrato and Inprint) are named as "qualified" discharges.

Order R2-2012-0077 (Order) names the discharger/responsible party as 999 Arques. Currently 999 Arques monitors groundwater monitoring wells located at 968/970 Stewart Drive (the Property).

The Regional Water Board's September 26, 2017, letter (Letter) required 999 Arques to submit a vapor intrusion (VI) workplan for Subunits 1, 2 and 5 of the SDOU to delineate the extent of the soil gas plume in all directions from Subunit 1, 999 Arques site # 43S0229. 999 Arques has submitted the following VI reports:

- March 29, 2018 Revised VI Assessment Sampling Report
- August 24, 2018, VI Assessment Sampling Report (August 2018 Report)

Based on the soil gas contamination found in Subunit 2 during 999 Arques' investigation. The Regional Water Board required the former operator (InPrint), currently ARC Document Solutions, LLC (ARC) to submit a vapor intrusion assessment workplan. In 2019, we approved a workplan to collect sub'slab soil vapor and subsurface soil vapor sampling to delineate the extent of volatile organic compounds (VOCs), primarily PCE and trichloroethene (TCE) to evaluate potential VI risks to current occupants within the commercial building at 968/970 Stewart. The vapor intrusion assessment has be completed. It appears that soil gas contamination consists of volatile organic compounds (VOCs) associated with a historic UST release from the historic operations of the InPrint Corporation facility.

The data indicates additional assessment and the case was reopened on February 20, 2020 with ARC as the responsible party. The Water Board approved the December 31, 2019, VI Investigation Report and requested an additional site characterization workplan by June 3, 2020.

Shallow soil vapor results collected in 2018 in February and July. July had the highest concentrations:
PCE = 10,400 ug/m3
TCE = 7.360 ug/m3

Sub-slab and indoor air sampling is pending by the former operator.

Title Description Comments:

Approval of Proposal for GW Monitoring Well Installation

Action Type: Response Requested - Other
Action: Correspondence
Action Date: 12/3/1984
Received Issue Date: 12/3/1984
Doc Link: https://geotracker.waterboards.ca.gov/view_documents_all?global_id=SL18261682&doc_id=6008119
Title Description Comments:

Letter - Verbal Approval of MW Installation as of Nov 26 1984

Action Type: Response Requested - Workplans
Action: Well Installation Workplan
Action Date: 11/26/1984
Received Issue Date: 11/26/1984
Doc Link: https://geotracker.waterboards.ca.gov/view_documents_all?global_id=SL18261682&doc_id=6008120
Title Description Comments:

Proposal -- Install of GW Monitoring Well

Action Type: Other Regulatory Actions
Action: Meeting
Action Date: 11/14/1984
Received Issue Date: 11/14/1984
Doc Link: https://geotracker.waterboards.ca.gov/view_documents?global_id=SL18261682&enforcement_id=6419518&temptable=ENFORCEMENT
Title Description Comments:

Meeting on 11/14/1984 with InPrint Corp

Action Type: Response Requested - Reports
Action: Tank Removal Report / UST Sampling Report
Action Date: 10/12/1984
Received Issue Date: 10/12/1984
Doc Link: https://geotracker.waterboards.ca.gov/view_documents_all?global_id=SL18261682&doc_id=6008122
Title Description Comments:

Solvent Tank Removal, Excavation, and Sampling Report

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB

RB Case No: 43S1113
Local Case No: 2020318
Begin Date: 9/14/2007
Lead Agency: SAN FRANCISCO BAY RWQCB (REGION 2)
Local Agency:
CUF Case: NO
CalEnvScreen Score:
EPA Region: 9
Qty Rlsd Gallons:
Potential COC: Tetrachloroethylene (PCE), Trichloroethylene (TCE)
How Discovered: Property Sale/Transaction, Site Assessment/Site Investigation
Stop Method: Other Means, Remove Contents
Stop Description: remove machine
Case Worker: EHD
Military DoD Site: No
Leak Reported Dt:
No Further Action Dt:
Potential Media of Concern: Other Groundwater (uses other than drinking water), Soil, Soil Vapor
How Discovered Description: site investigations
Calwater Watershed Name: Santa Clara - Palo Alto (205.50)
DWR GW Subbasin Name: Santa Clara Valley - Santa Clara (2-009.02)
Disadvantaged Community:
Coordinate Source: Google Map Move
Discharge Cause: Physc / Mech Damage, Spill
Discharge Source: Other, Piping
Facility Project Sub Type:
Calenviroscreen 3 Score: 56-60%
Calenviroscreen 4 Score: 55-60%
File Location: All Files are on GeoTracker or in the Local Agency Database
Site History:

Everybody's Cleaner was located in Fair Oaks Plaza. Opened in 1980. It closed on August 1, 2007 and moved out of the location on August 30, 2007. The dry cleaning equipment was removed on September 14, 2007 and the City Fire Department requested soil sampling. Tetrachloroethene (PCE) was detected in soil samples up to 9.9 milligrams per kilogram (mg/kg) collect in compacted fill beneath the slab. The current business is a nail and hair salon. Since the dry cleaner closed, groundwater, soil and soil vapor investigations have been completed. PCE is the primary chemical of concern in soil, groundwater and soil vapor. In January 2014, impacted soil was excavated and removed. A soil vapor extraction (SVE) system was installed through source area during the excavation. However, SVE system has not be tested or operated. In February 2014, hydrogen releasing compound (HRC) was injected into five points in the source area to enhance the breakdown of the chemicals. In September 2014, passive sub-slab venting system was implemented in the source area. Groundwater monitoring data indicates the HRC injections have reduced chemical concentrations and monitoring will continue to confirm the overall effectiveness and assess the next steps. Depth to water in the monitoring wells ranges between 7 and 10 feet below grade and the groundwater flow directions is towards the northeast. The Regional Water Board approved reducing monitoring of groundwater, soil gas, indoor air was from quarterly to semi-annually in May 2015 and in 2018 approved groundwater sampling of the highest concentrations monitoring well with the highest concentrations, MW-1. In 2017, three additional soil vapor probes were installed and sampled along the western property boundary. Soil gas concentrations in these three soil vapor probes attenuate laterally. However, the PCE concentrations are above commercial and residential environmental screening levels. In 2018, sealing potential preferential pathways inside the unit were completed and indoor air concentrations have been below the commercial ESL. Semi-annual monitoring is ongoing and the data evaluated. On February 10, 2020, we requested the following technical reports by May 15, 2020: 1) Remedial action plan to identify additional remedial options to reduce or eliminate impacts to human health onsite and prevent migration offsite towards the west 2) Off‐property vapor intrusion investigation workplan to delineate the soil gas plume to the west and evaluate the potential risk to residences Per our April 10, 2019, email we requested submittal of the semiannual monitoring events during the first and third quarters of each year and submitting reports report 45 days from receipt of analytical lab reports.

GeoTracker Search - Cleanup Action Report (as of June 5, 2024)

Action Type: OTHER (USE DESCRIPTION FIELD)
Begin Date: 9/25/2014
End Date:
Phase: Soil Vapor
Contaminant Mass Removed:
Description: On September 25, 2014, AEI connected the passive sub-slab venting system in the rear of tenant space. The sub-slab venting system includes a two-inch diameter machine slotted well screen that was emplaced within the remedial excavation and piping that is run to the outside of the building and up the wall to above the roof line. A wind-driven turbine is installed on the piping above the roofline to provide for the passive, wind-driven, operation of the venting system. The system is currently operating and semi-annually monitoring includes groundwater, soil gas, and indoor air sampling.

Action Type: IN SITU BIOLOGICAL TREATMENT
Begin Date: 2/3/2014
End Date: 2/4/2014
Phase: Other (See Description)
Contaminant Mass Removed:
Description: ERD solution consisting of HRC Advanced 3-D Microemulsion (3-DMe) and HRC Primer® was injected at the Site in five locations, including two (IP-3 and IP-4) inside the building, at the presumed source area, and three (IP-1, IP-2, IP-3R) outside the building, up-gradient of the presumed source area. Each point was advanced to 20 fbg into soil and groundwater, rods raised and solution injected at 2 foot intervals up to a depth of 8 fbg. A total of approximately 1,200 lbs of 3-DMe and 120 lbs of HRC Primer® (or a total of 2,400 gallons of 6% solution) were injected into the five points. Depth to groundwater has ranged from approximately 7 to 9 fbg in groundwater monitoring wells.

Action Type: EXCAVATION
Begin Date: 1/14/2014
End Date: 1/27/2014
Phase: Soil
Contaminant Mass Removed: 18 Tons
Description: Excavation completed in bathroom, corridor and storage area in rear of unit. Concrete floor was removed and transported to a recycling facility. Lateral limits of the excavation restricted to the building walls. Total excavation depth was 4 and 5 fbg in the corridor until soil concentrations were below soil leaching ESL. Sidewall samples at 2 ft exceeded the soil leaching ESLs. On February 7, 2017 two 20 yard bins of soil were transported under hazardous waste manifest to Clean Harbors in Buttonwillow, California.

Title Description Comments:

ERD solution consisting of HRC Advanced 3-D Microemulsion (3-DMe) and HRC Primer® was injected at the Site in five locations, including two (IP-3 and IP-4) inside the building, at the presumed source area, and three (IP-1, IP-2, IP-3R) outside the building, up-gradient of the presumed source area. Each point was advanced to 20 fbg into soil and groundwater, rods raised and solution injected at 2 foot intervals up to a depth of 8 fbg. A total of approximately 1,200 lbs of 3-DMe and 120 lbs of HRC Primer® (or a total of 2,400 gallons of 6% solution) were injected into the five points. Depth to groundwater has ranged from approximately 7 to 9 fbg in groundwater monitoring wells.

Action Type: Other Regulatory Actions
Action: Site Visit / Inspection / Sampling
Action Date: 1/17/2014

conduct site inspection during soil excavation activities

Action Type: Cleanup Action
Action: Excavation
Action Date: 1/14/2014
Received Issue Date:
Doc Link:
Title Description Comments:

Excavation completed in bathroom, corridor and storage area in rear of unit. Concrete floor was removed and transported to a recycling facility. Lateral limits of the excavation restricted to the building walls. Total excavation depth was 4 and 5 fbg in the corridor until soil concentrations were below soil leaching ESL. Sidewall samples at 2 ft exceeded the soil leaching ESLs. On February 7, 2017 two 20 yard bins of soil were transported under hazardous waste manifest to Clean Harbors in Buttonwillow, California.

Site History:	

The site is downgradient of the Applied Material Arques Campus site and adjacent to the former CAE site. Downgradient of the site is the redevelopment project at 1 AMD Place (residential apartments and townhomes, and a City park). The Mohawk Labs site is further upgradient. The site has been subject to cleanup requirements since 1999 under various Orders issued by the Regional Water Board. Previous remediation included 1991 source area excavation, and operation of a groundwater pump and treat system from 1990 to 2006. The current site cleanup requirements and history of the site are summarized in the Final Order No. R2-2012-0077 dated October 5, 2012. 999 Arques Corporation has assumed full responsibility for meeting all cleanup requirements for Steward Drive Operable Unit (SDOU), subunits 1, 2 and 5, and is referred to as the “discharger.” The 999 Arques Corporation is comprised of the following three companies: 1) Metropolitan Life Insurance Company, 2) Tyco Electronics Corporation, and 3) AMETEK. The 999 Arques Corporation is named as a discharger because of substantial evidence that one or more entities of which it is comprised discharged pollutants to soil and groundwater at the Site; owned or operated the property during or after the time of the activity that resulted in the discharge; had knowledge of the discharge or the activity that caused the discharge; and/or had the legal ability to prevent the discharge. Four water producing aquifers have been identified in the subsurface: The unconfined, shallow A-aquifer is between approximately 10 to 20 feet below the ground surface (fbg). The confined B-1, B-2, and B-3 aquifers are generally encountered between 20 to 45 feet, 45 to 60, and 70 to 80 fbg, respectively. Groundwater flows preferentially through channelized coarse-grained deposits within each aquifer. The groundwater gradient within the A and B aquifers in the area is generally toward the north-northeast. The aquifers are separated by semi-permeable to relatively impermeable saturated zones (aquitards), ranging from 5 to 20 feet thick. The shallow groundwater beneath the Site is not used for drinking water. Groundwater is impacted with moderate levels of volatile organic compounds (VOCs) such as trichloroethene (TCE), trichloroethane (TCA), and tetrachloroethene (PCE). The primary compound associated with the onsite sources areas is TCE. In March 2006, the groundwater remedy changed from pump and treat to enhanced anaerobic bioremediation (EAB) and monitored natural attenuation. EAB was first implemented in 2006 and the third injections were completed in 2013 and the results have shown successful decholorination of VOCs in groundwater. TCE and other VOC concentrations decreased 99% in A and B1 aquifers. Total VOC mass removal from A and B aquifers 1,131 pounds exceeds the 288 pounds removed by the groundwater pump and treat system during 16 years of operation. See the 2015-2016 Biennial Monitoring and Five Year Review Report dated January 30, 2017 for the current status and data. The 2012 Order summarizes the implementation of the Revised Remedial Action Plan (RRAP) for subunits 1, 2, and 5 of SDOU, dated January 30, 2012. The RRAP recommended Remedial Alternative 4 − EAB treatment, monitoring, engineering controls and institutional controls. The Order summarizes the EAB and the self monitoring plans (SMP) for groundwater, soil gas, and indoor air monitoring. The heating, ventilation and air conditioning (HVAC) system in the 999 East

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB

Arques Avenue building will be operated to mitigate potential VOC vapor intrusion into indoor air (engineering control). A Covenant and Environmental Restriction on Property (i.e., deed restriction) for the 999 East Arques Avenue property was recorded in March 2013 as an institutional control and restricts land use to commercial/industrial, only shallow landscaping excavating allowed, if deeper excavations, then the soil must be managed by the Covenanter. See the recorded deed restriction for further details. The Self-Monitoring Program for Order No. R2-2012-0077 for properties 995-999 East Arques Avenue, 1077 East Arques Avenue, and 968-970 Stewart Drive, Subunits 1, 2 and 5 of SDOU was modified and approved by the Regional Water Board on September 12, 2017 (see the letter for details). On December 19, 2017, the Regional Water Board approved the October 30, 2017 Vapor Intrusion Workplan and required a completion report by March 19, 2018. The Workplan was implemented and ten temporary soil gas probes were installed to approximately 6 feet below grade. Maximum tetrachloroethene concentrations in soil gas was 586 micrograms per cubic meter (ug/m3) and trichloroethene was 1,490 ug/m3. Probes were installed on 999 East Arques Avenue (Site), 1077 East Arques Avenue, and 968-970 Stewart Drive properties to delineate east and north of the Site building. On June 12, 2018, we requested additional sampling of at least the temporary soil gas probes to evaluate seasonal variations, preferably during this summer. We will use the data to evaluate the need for further vapor intrusion assessment. On November 19th, 2020, the Regional Water Board approved the indoor air investigation at 995 East Arques Avenue, and required no further investigation of indoor at 995. None of the contaminants of concern were above their respective screening levels inside the facility.

Site History:

The site is downgradient of the Applied Material Arques Campus site and adjacent to the former CAE site. Downgradient of the site is the redevelopment project at 1 AMD Place (residential apartments and townhomes, and a City park). The Mohawk Labs site is further upgradient. The site has been subject to cleanup requirements since 1999 under various Orders issued by the Regional Water Board. Previous remediation included 1991 source area excavation, and operation of a groundwater pump and treat system from 1990 to 2006. The current site cleanup requirements and history of the site are summarized in the Final Order No. R2-2012-0077 dated October 5, 2012. 999 Arques Corporation has assumed full responsibility for meeting all cleanup requirements for Steward Drive Operable Unit (SDOU), subunits 1, 2 and 5, and is referred to as the "discharger." The 999 Arques Corporation is comprised of the following three companies: 1) Metropolitan Life Insurance Company, 2) Tyco Electronics Corporation, and 3) AMETEK. The 999 Arques Corporation is named as a discharger because of substantial evidence that one or more entities of which it is comprised discharged pollutants to soil and groundwater at the Site; owned or operated the property during or after the time of the activity that resulted in the discharge; had knowledge of the discharge or the activity that caused the discharge; and/or had the legal ability to prevent the discharge.

Four water producing aquifers have been identified in the subsurface:
The unconfined, shallow A-aquifer is between approximately 10 to 20 feet below the ground surface (fbg).
The confined B-1, B-2, and B-3 aquifers are generally encountered between 20 to 45 feet, 45 to 60, and 70 to 80 fbg, respectively.
Groundwater flows preferentially through channelized coarse-grained deposits within each aquifer. The groundwater gradient within the A and B aquifers in the area is generally toward the north-northeast.

The aquifers are separated by semi-permeable to relatively impermeable saturated zones (aquitards), ranging from 5 to 20 feet thick. The shallow groundwater beneath the Site is not used for drinking water.

Groundwater is impacted with moderate levels of volatile organic compounds (VOCs) such as trichloroethene (TCE), trichloroethane (TCA), and tetrachloroethene (PCE). The primary compound associated with the onsite sources areas is TCE. In March 2006, the groundwater remedy changed from pump and treat to enhanced anaerobic bioremediation (EAB) and monitored natural attenuation. EAB was first implemented in 2006 and the third injections were completed in 2013 and the results have shown successful decholorination of VOCs in groundwater. TCE and other VOC concentrations decreased 99% in A and B1 aquifers. Total VOC mass removal from A and B aquifers 1,131 pounds exceeds the 288 pounds removed by the groundwater pump and treat system during 16 years of operation. See the 2015-2016 Biennial Monitoring and Five Year Review Report dated January 30, 2017 for the current status and data.

The 2012 Order summarizes the implementation of the Revised Remedial Action Plan (RRAP) for subunits 1, 2, and 5 of SDOU, dated January 30, 2012. The RRAP recommended Remedial Alternative 4 – EAB treatment, monitoring, engineering controls and institutional controls. The Order summarizes the EAB and the self monitoring plans (SMP) for groundwater, soil gas, and indoor air monitoring. The heating, ventilation and air conditioning (HVAC) system in the 999 East Arques Avenue building will be operated to mitigate potential VOC vapor intrusion into indoor air (engineering control). A Covenant and Environmental Restriction on Property (i.e., deed restriction) for the 999 East Arques Avenue property was recorded in March 2013 as an institutional control and restricts land use to commercial/industrial, only shallow landscaping excavating allowed, if deeper excavations, then the soil must be managed by the Covenanter. See the recorded deed restriction for further details.

The Self-Monitoring Program for Order No. R2-2012-0077 for properties 995-999 East Arques Avenue, 1077 East Arques Avenue, and 968-970 Stewart Drive, Subunits 1, 2 and 5 of SDOU was modified and approved by the Regional Water Board on September 12, 2017 (see the letter for details).

On December 19, 2017, the Regional Water Board approved the October 30, 2017 Vapor Intrusion Workplan and required a completion report by March 19, 2018. The Workplan was implemented and ten temporary soil gas probes were installed to approximately 6 feet below grade. Maximum tetrachloroethene concentrations in soil gas was 586 micrograms per cubic meter (ug/m3) and trichloroethene was 1,490 ug/m3. Probes were installed on 999 East Arques Avenue (Site), 1077 East Arques Avenue, and 968-970 Stewart Drive properties to delineate east and north of the Site building. On June 12, 2018, we requested additional sampling of at least the temporary soil gas probes to evaluate seasonal variations, preferably during this summer. We will use the data to evaluate the need for further vapor intrusion assessment.

On November 19th, 2020, the Regional Water Board approved the indoor air investigation at 995 East Arques Avenue, and required no further investigation of indoor at 995. None of the contaminants of concern were above their respective screening levels inside the facility.
