

	Report to Council	Overview of Universal/Guaranteed Basic Income Study Issue		
Adjourn Special Meeting			<ul style="list-style-type: none"> • Ernie and Joe Dougherty. Gave presentation. • Mehlinger. Recognize as chair Din would normally go last, maybe he could go first. (wants to stick to speaking at the end) • Mehlinger. Why and the Who are the issues. In strategic study session, concerned that the approach was on getting them out of homeless not prevention. Keep people sliding into homelessness. Especially looking on reducing: powerful, 40 families in TBRA – could also be in GBI could supercharge the TBRA program. Other folks, at risk, recently housed, low income with children, domestic violence survivors; like idea of lump sum up front (\$5,000 up front \$600/month). • Klein. thanks to Din for sponsoring (Klein’s family moved around a lot and received food assistance). GBI can’t solve problem for everyone. Why, step ladder, don’t fall further into poverty and prevent homelessness. Target, not completely behind TBRA recipients. Like it as a narrow group. Parents with income below certain level (Mt. View); student parents (in college/community college); 2 years, allows getting degree. Philanthropic partners. Foster Youth aging out and going to college. Like up front lump sum. 2-year term. ½ to 1/3 up front. Finding funding and partners is critical. • Sell. Starting to see models (the gold standard?). [Joe, data doesn’t support any particular group—there is a minimum amount, Bay Area \$500-\$1,000, year minimum key success factors]. Why give them a little help can change the course of their life, who low income families with children, foster children, low income college students. What \$500-\$1,000 2-years, 1/3 split up front. 	

			<ul style="list-style-type: none">• Srinivasan. Slide 4, 733 + 64. Slide 18, Who did they talk to [reviewed slides 26/27 in the extras] Step ladder, prevention of homelessness. Why comparing effectiveness with other policies. Don't want the same household to get 2 benefits. Families w/ children; parents who are partially blind or in schooling. Duration 1-2 years. Needs to make an impact. Hybrid lump + monthly• Melton. Thank you to Joe Dougherty and Ernie. One of co-sponsors of the study. People know best how to spend the money. Moms and Dads can make these decisions. Look for funding – General Fund (there could be a blow-back from the community). Use the existing programs as benchmarks. Step ladder is the way to approach (sometimes you need a boost); the "who" starts and ends with children (Mt. View ended up in the right place); then foster children, then 18 years olds going to community college.• Joe. Need to make sure not in more than one program• Din. huge thank you for presentation. Lots of thoughts. Opportunity to be a leader. In the region Sunnyvale is one of the few. In the middle, okay with either of them. Many American's are one \$1,000 check from being over the edge. Leaning slightly stronger of a step ladder. Lump sum vs. spread out on who. 2 year duration. Larger amount per month (maybe fewer people). Think about trade-offs. Like idea of families and parents. Federal poverty guideline as a starting point. Students (not specifically college students); immigration status shouldn't preclude anyone; TBRA (hesitant to focus on TBRA). Long term funding. Council has discussed long-term funding stream; take this in to account. Thinking holistically about new revenue stream.• Mehlinger. Slide of the groups of outreach. Add NovaWorks; Sunnyvale Rotary Club.

			<ul style="list-style-type: none">• Din. going above 15% for administration troubles him.• Mike Serrone. Excellent presentation. Many studies that show it works. Canada program. Don't need another pilot, just call it a program. Resist the temptation to improve it by adding lengthy application form. Genius of these programs is that they are so simple.• Marie Bernard. Thank Joe, Alberto and Ben. 733 is in SCS database. So ready to partner with the city on a program. Change lives, change city for the better. 1/3 of children in are at risk of hunger. 10,000 helped (that's 40,000 if do math). 30% people helped are children. Program to partner with SSD/FUHSD. 2,500 children \$100 gift cards for school. A trampoline. No control group. Program. Barriers as low and few as possible. So much data, willing to share.• Stephen Meier. Enjoyed who presentation. Anything we can do to help unhoused population. Ask local employers. Apple computer (largest); tax dodge. Great employers in Sunnyvale. Recognize Google for their work in Moffett Park area. Help all of Sunnyvale. Would like population to come from local housing. <p>7:06. Adjourned. 10 minute recess. 7:15</p>
