Salud Mental 2SLGBTQIA+: Barreras

- “La gran mayoría (90%) de jóvenes LGBTQ+ dijeron que su bienestar se vio afectado negativamente debido a la política reciente. Más de la mitad (53%) dijeron que su bienestar se vio afectado mucho por la política.” (The Trevor Project, [Encuesta Nacional de EE. UU. 2024 sobre la Salud Mental de Jóvenes LGBTQ+](#)).
- “Restricciones federales para obtener documentación legal que afirme la identidad de género, como [pasaportes](#), para personas transgénero, de género expansivo e intersexuales (TGI).”
- Miedo a la detención debido al aumento de la [actividad de ICE en el Condado de Santa Clara](#). Muchas personas se identifican como 2SLGBTQIA+ y tienen estatus migratorio.
- Miedo a una mayor discriminación en entornos de atención médica, específicamente para personas TGI (transgénero, de género expansivo e intersexuales).
 - [U.S. Trans Survey 2022](#): El 48% de las personas trans encuestadas reportaron haber tenido al menos una experiencia negativa con proveedores de atención médica debido a prejuicios anti-trans en los últimos 12 meses.
 - El 24% de las personas encuestadas no acudieron al médico cuando lo necesitaban debido al temor a ser maltratadas

Salud Mental 2SLGBTQIA+: Barreras

- Miedo a perder el financiamiento para los servicios de salud mental enfocados en la comunidad 2SLGBTQIA+
- La eliminación de bases de datos 2SLGBTQIA+ exacerba la disparidad existente en la investigación y en las brechas de datos, lo que conduce a un aumento en las carencias de servicios de salud, incluidos los servicios de salud mental, especialmente para adultos 2SLGBTQIA+
- La falta de investigación y visibilidad impacta en las políticas públicas sobre la salud 2SLGBTQIA+ (específicamente en prevención e intervención temprana) y crea limitaciones en la salud, particularmente en los sectores de encarcelamiento y vivienda, a pesar de las altas tasas de victimización.
- **IMPORTANTE:** Ser 2SLGBTQIA+ no es una barrera para el bienestar. ¡Las barreras provienen de los prejuicios institucionales anti-gay y anti-trans, así como de la violencia!

2SLGBTQIA+ Mental Health: Consecuencias de las barreras

- **Riesgo aumentado de suicidio en jóvenes LGBTQ+ (13–24 años)**
 - **39%** de los jóvenes LGBTQ+ consideraron seriamente intentar suicidarse en el último año, incluyendo casi la mitad de los jóvenes transgénero y no binarios (**46%**) y 3 de cada 10 jóvenes cisgénero (**30%**).
 - **12%** de los jóvenes LGBTQ+ intentaron suicidarse en el último año, incluyendo **14%** de jóvenes transgénero y no binarios y **7%** de jóvenes cisgénero.
 - Tasas más altas de intentos de suicidio entre jóvenes BIPOC.
- **Aumento de pensamientos y conductas suicidas en comunidades trans, no binarias y de género expansivo (TNBGE) (Encuesta Trans de EE. UU., 2015)**
 - **7%** de todas las personas encuestadas intentaron suicidarse en el último año, casi doce veces la tasa de intentos de suicidio en la población general de EE. UU.
 - **40%** de las personas encuestadas han intentado suicidarse en algún momento de su vida.
 - **82%** de las personas encuestadas han pensado seriamente en quitarse la vida en algún momento de su vida.

Salud mental 2SLGBTQIA+: Resultados de las barreras

- Aumento de la angustia psicológica grave en comunidades TNBGE (Encuesta Trans de EE. UU. 2015)
 - “El 39% de las personas encuestadas reportaron estar experimentando actualmente angustia psicológica grave, una tasa casi ocho veces mayor que en la población general de EE. UU. (5%).”
 - Mayor riesgo de uso indebido de sustancias (NAMI)
 - “Las personas adultas LGB tienen casi el doble de probabilidades que las personas adultas heterosexuales de presentar un trastorno por uso de sustancias. Las personas transgénero tienen casi cuatro veces más probabilidades que las personas cisgénero de experimentar un trastorno por uso de sustancias”
- Mayor prevalencia de condiciones de salud mental diagnosticadas (Lu, Soltani, Austin, et al. 2025.)
 - “[Los grupos de minorías sexuales y de género] (SGM, por sus siglas en inglés) presentaron mayores probabilidades de tener al menos 4 de 10 condiciones de salud mental diagnosticadas en comparación con sus contrapartes cisgénero heterosexuales.”
 - “Las barreras de acceso a la atención médica enfrentadas por las personas SGM pueden llevar a condiciones de salud mental no diagnosticadas, lo cual puede causar una subestimación de la verdadera asociación.”

Salud mental 2SLGBTQIA+: ¿Qué podemos hacer?

- Abordar todas las interacciones con humildad cultural
- Reconocer y celebrar la interseccionalidad
- Educarse constantemente y educar a los demás
 - Capacitaciones gratuitas de [LGBTQ Wellness](#) y [Q Corner](#)
 - [Coalición de Atención Trans](#) Materiales educativos
- Alianza activa: corregir el lenguaje sesgado y la desinformación cuando la escuches o veas, visibilizar y apoyar las experiencias y a las personas 2SLGBTQIA+, ¡y mucho más!
- Compartir recursos
