SUNNYVALE, CALIFORNIA 94088-3707

**NOTICE OF INTENT TO ADOPT A
MITIGATED NEGATIVE DECLARATION**

This form is provided as a notification of an intent to adopt a Mitigated Negative Declaration which has been prepared in compliance with the provisions of the California Environmental Quality Act of 1970, as amended, and Resolution #118-04.

PROJECT TITLE:

803-833 W. El Camino Real

PROJECT DESCRIPTION AND LOCATION (APN):

FILE #: 2015-7756

Location: 803 W El Camino Real (APN: 165-01-029,-042, -043)

Proposed Project: SPECIAL DEVELOPMENT PERMIT for a mixed use development on a 2.97 acre site with 49 residential units (40 apartments + 8 attached single family homes + 1 detached single family home), approximately 5,662 s.f. commercial space, and expansion of the adjacent Grand Hotel (51 rooms)

VESTING TENTATIVE MAP to subdivide the 3 existing lots into 11 separate lots. A condominium map is requested for lot #11.

Applicant / Owner: De Anza Properties / Pastoria El Camino Partnership

Environmental Review: Mitigated Negative Declaration

WHERE TO VIEW THIS DOCUMENT:

The **Mitigated Negative Declaration**, its supporting documentation and details relating to the project are on file and available for review and comment in the Office of the Secretary of the Planning Commission, City Hall, 456 West Olive Avenue, Sunnyvale.

This **Mitigated Negative Declaration** may be protested in writing by any person prior to 5:00 p.m. on April 25, 2016. Protest shall be filed in the Department of Community Development, 456 W. Olive Avenue, Sunnyvale and shall include a written statement specifying anticipated environmental effects which may be significant. A protest of a **Mitigated Negative Declaration** will be considered by the adopting authority, whose action on the protest may be appealed.

HEARING INFORMATION:

A public hearing on the project is scheduled for:

Monday April 25, 2016 at 8:00 p.m. in the Council Chambers, City Hall, 456 West Olive Avenue, Sunnyvale.

TOXIC SITE INFORMATION:

(No) listed toxic sites are present at the project location.

Circulated On March 25, 2016

Signed: 
Andrew Miner, Planning Officer

Applicant's Name	Pastoria El Camino Partnership
Zoning	C-2/ECR (Highway Business - El Camino Real Precise Plan)
General Plan	Commercial General Business
Other Public Agencies whose approval is required	California Department of Transportation (CalTrans) review for improvements on El Camino Real

BRIEF PROJECT DESCRIPTION

The proposed project is located on a combined 2.97-acre parcel and consists of a **Special Development Permit** to demolish an approximately 23,000 square foot, one and two-story multi-tenant retail and office building and a 3,000 square foot fast food restaurant building and construct a four-story mixed use retail/office and residential building consisting of 40 condominium units and approximately 5,600 square feet of commercial space. The project also consists of constructing 9 single family homes and a hotel annex building (51 rooms) which is associated with the existing adjacent hotel (Grand Hotel). The project includes a ground-level podium parking garage and associated site improvements. A Tentative Map application is also proposed to subdivide the lots into separate ownership lots including individual condominium lots for the 40 residential units within the mixed use building.

DETAILED PROJECT DESCRIPTION

Surrounding Uses and Setting: The project site is located at the northwest street intersection of El Camino Real, and Pastoria Avenue which wraps around to W. Olive Avenue. The project site is located within the Precise Plan for El Camino Real. The site is zoned C-2/ECR (Highway Business/ Precise Plan for El Camino Real). The site is surrounded by a hotel to the west, commercial uses to the south across W. El Camino Real, single family residential across W. Olive to the north, and the City's Public Safety Department to the east across S. Pastoria Avenue.

The one and two story, multi-tenant commercial building is currently onsite was developed in 1988. The fast food restaurant (currently - Jack in the Box) was constructed in 1972. Prior to the

existing development, the site was historically used as agricultural land as well as a gas station at the corner. Commercial businesses currently onsite include professional offices, a deli/market, shoe repair, bakery, and personal service salons. A parking lot is front of the building and can be accessed from El Camino Real and Pastoria Ave. The vacant .54 acre lot at the corner of the site is seasonally operated for pumpkin and Christmas tree sales.

Bus service is provided by the Santa Clara Valley Transportation Authority (VTA) with a stop in front of the project site along the El Camino Real street frontage. A bus stop is also located directly across the street to serve transit from the opposite direction. A public sidewalk is located around the entire site along each street side.

The project is targeting 110 Build-It-Green points for the residential portion of the project which exceeds the minimum 80 points requires and allows for additional 5% lot coverage or 5 feet in height over the maximum allowed. For the commercial portion, the project is designed at LEED Silver intent as required.

On-site Development: The proposed project includes the complete demolition of the existing commercial buildings and construction of a four-story mixed use building (40 condo units and approximately 5,600 square feet of commercial area), nine two-story single family homes and a four-story hotel annex building. The proposed unit mix within the mixed use building includes 37 three-bedroom units and 3 two-bedroom units. Each of the single family units along W. Olive consists of four bedrooms. A fitness room for residents is provided on the second level. Common open spaces are provided in courtyards on the ground and second floors, and private open space for each unit is provided through balconies. A larger open space area with a pedestrian path is situated between the hotel annex building and the mixed use building. Each of the single family homes would maintain front and private rear yards. Each of the 40 condo units has 300 cubic feet of lockable storage space consistent with Sunnyvale Municipal Code (SMC) requirement within a small basement area beneath the parking garage. Solid waste and recycling service is provided through chutes on each floor that dispose into a central trash room within the parking garage. A separate trash enclosures are located adjacent to the retail building. A new enclosure will also be provided for the combined hotel buildings on the neighboring site.

A Special Development Permit (SDP) is required for the project's site and architectural review, since the site is located within a Planned Development combining district. Deviations from the Sunnyvale Municipal Code (SMC) may be considered by the Planning Commission with the SDP. The State Density Bonus Law (Government Code Section 65915-65918) allows consideration of up to three city code concessions since this project is a qualifying affordable housing project. Project concessions and deviations from the SMC include:

- Lot Coverage – 55% proposed where up to 35% is allowed, per Section 19.32.020;
- Front Yard Setback along Pastoria Ave. – 12' 8" proposed for floors 2-4, when a minimum of 15' is required, per Section 19.34.050.

The proposed building would be four stories tall with a maximum height of 53' 6" from the street curb elevation along El Camino Real & Pastoria. The building parapet extends up to approximately 60 feet for a portion of the building. A majority of the building is approximately 49' 6" tall. The hotel buildings reach a peak of approximately 51' with a majority of the building peaking at 46'. The single family homes range from 26' to 28' tall.

An existing driveway off Pastoria and two off El Camino Real would be removed and replaced in roughly the same location. The driveway at the furthest western location along El Camino Real

would serve the hotel annex building. The driveway off Pastoria Avenue would serve to allow access to the site with nearby parking that serves commercial uses. The driveway would extend into the ground level parking garage under the mixed-use building. The majority of parking spaces within the parking garage would serve residential uses. A driveway would wrap around and allow ingress and egress to El Camino Real. Pedestrian walkways are positioned along the perimeter of the mixed use building along the fence adjacent to single family residential uses and between the annex buildings. A majority of the existing redwoods located along the Olive Avenue street frontage are planned to be preserved. A total of 12 trees will be preserved while 61 will be removed. A total of 128 trees are to be added to the site. An outdoor dining plaza serving commercial uses is proposed towards the corner of the site at El Camino Real and Pastoria Avenue. New wider sidewalks are proposed to be constructed around the site.

Construction Activities and Schedule: Construction activities include full demolition of the existing buildings and paving onsite and construction of the new mixed use building, hotel annex, and single family housing with associated on-site and off-site improvements. The project will be subject to the Sunnyvale Municipal Code requirements for construction noise and hours of construction contained in Chapter 16.08.030.

Construction of the project is estimated to span 18 months, which is typical for a project of this size. Construction will not include deep pile foundations or pile driving.

Off-site Improvements: New sidewalks, street trees, and street lights will be installed in the public right-of-way, per standard specifications. The new sidewalk would align with constructed sidewalks on the west sides of the project site. Standard water, sewer, right-of-way and utility upgrades will be provided as required by the Municipal Code.

EVALUATION OF ENVIRONMENTAL IMPACTS:

1. A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g. the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g. the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).
2. All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.
3. Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect may be significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.
4. "Negative Declaration: Potentially Significant Unless Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level (mitigation measures from Section 17, "Earlier Analysis," may be cross-referenced).
5. Earlier analysis may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. Section 15063 (c) (3) (d). In this case, a brief discussion should identify the following:

6. Earlier Analysis Used. Identify and state where they are available for review.
7. Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
8. Mitigation Measures. For effects that are "Less than Significant with Mitigation Measures Incorporated," describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project
9. Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g. general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED:

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

- | | | |
|---|--|---|
| <input type="checkbox"/> Aesthetics | <input type="checkbox"/> Hazards & Hazardous Materials | <input type="checkbox"/> Public Services |
| <input type="checkbox"/> Agricultural Resources | <input type="checkbox"/> Hydrology/Water Quality | <input type="checkbox"/> Recreation |
| <input type="checkbox"/> Air Quality | <input type="checkbox"/> Land Use/Planning | <input type="checkbox"/> Transportation/Traffic |
| <input type="checkbox"/> Biological Resources | <input type="checkbox"/> Mineral Resources | <input type="checkbox"/> Utilities/Service Systems |
| <input type="checkbox"/> Cultural Resources | <input type="checkbox"/> Noise | <input type="checkbox"/> Mandatory Findings of Significance |
| <input type="checkbox"/> Geology/Soils | <input type="checkbox"/> Population/Housing | |

MANDATORY FINDINGS OF SIGNIFICANCE (see checklist for further information):

Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory? Yes No

Mandatory Findings of Significance? Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of the past projects, the effects of other current projects, and the effects of probable future projects)? Yes No

Mandatory Findings of Significance? Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly? Yes No

DETERMINATION:

On the basis of this initial evaluation:

I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

I find that the proposed project MAY have a "potential significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect (1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and (2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

Further Discussion if “Less Than Significant” with or without mitigation:

1. Aesthetics – Scenic Resources (Less Than Significant) – The proposed project site is located within an urban area of mixed uses (commercial and residential) that has no designated scenic resources. The project would result in the removal of all the existing trees on-site. In accordance with Chapter 19.94 of the SMC, the project will provide replacement trees onsite as well as street trees along each street frontage. The replacement of trees and landscaping onsite and along the street frontages would improve the visual/aesthetic character of the area. Therefore, the proposed project would have a less than significant impact on scenic resources at the project site.

2. Aesthetics – Visual Character (Less Than Significant) - Construction of the proposed project will alter the visual character of this site by transitioning the site from a commercial to a mixed use (commercial & residential) by placing a four-story mixed use building, four-story hotel annex building, and nine two-story attached single family homes on a site currently containing one and two-story commercial buildings, pavement, and unpaved areas. The proposed project is subject to the Citywide Design Guidelines, and the design of the buildings and site layout will be in general conformance with the adopted design guidelines. The proposed buildings will be taller than most of the nearby buildings. The City’s implementation of the City-Wide Design Guidelines and staff’s review of final development plans, which will be submitted for final Building Permit review, will ensure that the final design of the project is consistent with the plans reviewed by the Planning Commission. The project will not substantially degrade the existing visual character or quality of the site and its surroundings. Therefore, impacts would be less than significant.

3. Aesthetics - Lighting (Less Than Significant) - There is no lighting plan available for the project site at this time. Lighting on the project site will be reviewed by Planning staff prior to issuance of building permits,

and will be reviewed for consistency with the City's policies and City-Wide Design Guidelines to reduce light and glare, and to ensure it will not adversely affect the visual quality of the area or create a substantial new source of light or glare.

4. Population and Housing (Less Than Significant) – The General Plan and the Zoning designation for the project site allows for mixed-use (commercial and medium density residential) developments. The El Camino Real Specific Plan does not currently prescribe density limitations for residential uses. The proposed residential density is approximately 16.5 dwelling units to the acre.

9. Transportation and Traffic – Parking (Less Than Significant) – For the mixed use portion of the project, a minimum of 103 total parking spaces is required per Sunnyvale Municipal Code (SMC) Section 19.46.080. The proposed project would include a total of 106 parking spaces which are located in the podium parking garage or open parking lot behind the building. Each of the single family homes provide a two-car garage and two driveway spaces as required. The combined hotel (including the neighboring site provides 127 spaces where 124 is required.

14-16. Noise (Less than Significant/Less than Significant with Mitigation) – A noise study was prepared by Charles Salter, dated July 15, 2015. The study is provided as an exhibit attached to this study and is available for review at the City of Sunnyvale's Community Development Department, Monday through Friday between 8 a.m. and 5 p.m.

State of California Building Code

Part 1 of the Supplement to the California Building Code, effective 1 July 2015, requires that the indoor noise level in residential units of multi-family dwellings not exceed DNL 45 dB where the exterior noise level is greater than DNL 60 dB.

CALGreen Criteria – California Building Standards Code

Section 5.507.4 of the CALGreen code requires mitigating exterior noise at commercial spaces where sound levels regularly exceed 65 dB. If the exterior noise level regularly exceeds 65 dB, then the building envelope must have wall and roof-ceiling assemblies designed to provide an interior noise environment not exceeding a $Leq(h)$ of 50 dB in occupied areas during hours of operation. We assumed that the hours of operation for the retail spaces would be from 7 am to 8 pm and used the loudest $Leq(h)$ during that period as the basis of design.

City of Sunnyvale Noise Element

The City of Sunnyvale's General Plan interior noise standard is consistent with the State requirement for multi-family housing. Additionally, a maximum instantaneous noise level (L_{max}) of 50 dB in bedrooms and 55 dB in other rooms is expected when the residence is exposed to train or aircraft noise.

According to the City of Sunnyvale's Land-Use Compatibility chart (Table 2 of the Noise Element), for residential land uses, sound levels below DNL 60 DB are considered "normally acceptable". Sound levels between DNL 60 dB and 75 dB are considered "conditionally acceptable", meaning that mitigation is needed to bring the sound level down to the normally acceptable level. Levels above DNL 75 dB are "normally unacceptable".

MITIGATIONS – Commercial/Retail

WHAT:

- (1) To meet the CALGreen interior noise criterion of $Leq(h)$ 50 dB, the glazing systems will need to achieve the STC ratings shown in Figure 2.

WHEN: The mitigations shall be incorporated into conditions of approval for the Special Development Permit prior to its final approval by the City's Planning Commission. The conditions will become valid when the Permit is approved and prior to the building permit issuance.

WHO: The developer is responsible for completing the mitigation measure.

HOW: The conditions of approval will require these mitigation measures to be incorporated into the construction plans.

MITIGATIONS – Residential/Hotel

WHAT:

- (1) To meet the project indoor noise criterion of DNL 45 dB, it will be necessary for some of the facades to be sound-rated. We calculated the window and exterior door STC ratings needed to meet the project criterion. These are shown on Figures 3 to 5. For our calculations, we assumed that bedrooms will be carpeted and all other rooms will have hard-surfaced flooring.
- (2) The recommended STC ratings are for full window assemblies (glass and frame) rather than just the glass itself. Tested sound-rated assemblies should be used. For reference, typical one-inch glazing assemblies (two 1/4-inch thick panes with 1/2-inch airspace) achieve an STC rating of 32. Where STC ratings above 33 are required, at least one pane will need to be laminated.
- (3) Where windows need to be closed to achieve an indoor DNL of 45 dB, an alternative method of supplying fresh air (e.g., mechanical ventilation) should be provided. This applies to the project residences and guestrooms with STC ratings shown. This issue should be discussed with the project mechanical engineer.

WHEN: The mitigations shall be incorporated into conditions of approval for the Special Development Permit prior to its final approval by the City's Planning Commission. The conditions will become valid when the Permit is approved and prior to the building permit issuance.

WHO: The developer is responsible for completing the mitigation measure.

HOW: The conditions of approval will require these mitigation measures to be incorporated into the construction plans.

19. Biological Resources – Wildlife (Less than Significant with Mitigation) – While the entire site is disturbed and developed, raptors (such as falcons, hawks, eagles, and owls) and other migratory birds may utilize the large trees on-site for foraging or nesting. Nesting raptors are among the species protected under provisions of the Migratory Bird Treaty Act and California Department of Fish and Wildlife (CDFW) Code Sections 3503, 3503.5, and 2800. The proposed project would remove many of the existing trees on-site. Construction disturbance near raptor nests can also result in the incidental loss of fertile eggs or nestlings, or otherwise lead to nest abandonment in the trees on the project site. Disturbance that causes abandonment and/or loss of reproductive effort is considered a taking by the CDFW. Any loss of fertile eggs, nesting raptors, or any activities resulting in nest abandonment would constitute a significant impact. The following mitigation measures will be implemented to avoid abandonment of raptor and other protected migratory birds nests, and reduce impacts to a less than significant level. Therefore, the following mitigation measures are recommended to reduce potential impacts on biological resources:

MITIGATION – Biological Resources

WHAT:

- (1) If construction commences anytime during the nesting/breeding season of native bird species (typically February through August), a qualified biologist must conduct a preconstruction survey of the project vicinity for nesting/breeding birds at least 30 days prior to the start of construction

activities. The intent of the survey is to determine if active raptor nests or other species protected by the Migratory Bird Treaty Act are present within the construction zone or within 250 feet of construction zone for raptors and 50 feet of the construction zone for other migratory birds. The survey area must include all trees and shrubs within zones that have the potential to support nesting birds.

- (2) If active nests are found in the area that could be directly affected or are within 250 feet of construction for raptors and 50 feet for other migratory birds, a no-disturbance buffer zone must be created around active nests during the breeding season or until a qualified biologist determines that all young have fledged. Once the young have fledged, tree removal and other construction activities may commence.

WHEN: These mitigations shall be incorporated into conditions of approval for the Special Development Permit (SDP) prior to its final approval by the City's Planning Commission. The conditions will become valid when the SDP is approved and prior to building permit issuance.

WHO: The property owner shall be solely responsible for implementation and maintenance of these mitigation measures.

HOW: The conditions of approval will require these mitigation measures to be incorporated into the construction plans.

20. Biological Resources (Less than Significant) – An arborist report was prepared for the project by HortScience, Inc., dated March 7, 2015. The report recommends removal of 61 of the 73 existing trees onsite of varying species. Seven nearby off-site trees were also evaluated. Most of the trees are located within the interior of the site and positioned within the proposed building foot print or parking lot. Twelve (12) on-site coast redwoods in good and fair condition are planned to be preserved. Seven off-site trees, may be impacted by development. Trees cannot be damaged or removed without the neighbor's approval and must be preserved and protected. The City's Tree Replacement Standards require a minimum of 104 24" box trees to be planted to offset the loss of protected trees. The proposed project includes 104 24" box and 24 36" box trees, which will mitigate the loss of the existing protected trees in accordance with the City's Tree Replacement Standards, to a less than significant level.

23. Historic and Cultural Resources (Less than Significant with Mitigation) – The project construction will include grading and land disturbance. A California Historical Resources Information System (CHRIS) letter dated December 10, 2013 documents a records search that reviewed pertinent base maps, cultural resources records and reports, historic-period maps, and literature from Santa Clara County. Review of historical literature and maps gave no indication of the possibility of historic-period archaeological resources within the El Camino Real and Pastoria Avenue project area. With this in mind, there is a low potential of identifying unrecorded historic-period archaeological resources in the proposed El Camino Real and Pastoria Avenue project area. The following mitigations are recommended to reduce the potential impact to less than significant level:

MITIGATION – Historic and Cultural Resources

WHAT:

- (1) A qualified archaeologist shall conduct further archival and field study to identify cultural resources. Field study may include, but is not limited to, pedestrian survey, hand auger sampling, shovel test units, or geoarchaeological analyses as well as other common methods used to identify the presence of archaeological resources. Please refer to the list of consultants who meet the Secretary of Interior's Standards at <http://www.chrisinfo.org>.
- (2) If archaeological resources are encountered during construction, work should be temporarily halted in the vicinity of the discovered materials and workers should avoid altering the materials and their context until a qualified professional archaeologist has evaluated the situation and

provided appropriate recommendations. Project personnel should not collect cultural resources. Native American resources include chert or obsidian flakes, projectile points, mortars, and pestles; and dark friable soil containing shell and bone dietary debris, heat-affected rock, or human burials. Historic-period resources include stone or adobe foundations or walls; structures and remains with square nails; and refuse deposits or bottle dumps, often located in old wells or privies.

WHEN: These mitigations shall be incorporated into conditions of approval for the Special Development Permit (SDP) prior to its final approval by the City's Planning Commission. The conditions will become valid when the SDP is approved and prior to building permit issuance.

WHO: The project property owner shall be solely responsible for implementation and maintenance of these mitigation measures.

HOW: The conditions of approval will require these mitigation measures to be incorporated into the construction plans.

24. Public Services – Schools (Less than Significant) – The project site is located within the Sunnyvale School District and Fremont Union High School District. In both districts, all new residential developments are required to fully offset their anticipated impact on demand for schools by paying a school impact fee as set by the Districts. The City requires evidence of school impact fee payment prior to issuance of building permits. Therefore, impacts on public schools will be less than significant.

27. Air Quality - Greenhouse Gases (No Impact) – A Sunnyvale "Climate Action Plan CEQA Checklist" was completed for the project, which provides further analysis related to project greenhouse gas emissions. The Checklist demonstrates conformance with the City's adopted Climate Action Plan; therefore, the project is not expected to have an impact on greenhouse gas emissions.

30. Air Quality – Exposure to Sensitive Receptors (Less than Significant with Mitigation) – Given the project site's proximity to El Camino Real, an Air Quality and GHG Emissions Assessment prepared by Illingworth and Rodkin, Inc., dated February 5, 2016. The study addressed toxic air contaminant (TAC) issues and mitigation measures to reduce significant exposures of sensitive receptors to air pollutant emissions. Air quality impacts would occur due to temporary construction emissions and as a result of direct and indirect emissions from users of the new homes.

Sensitive receptors are locations where an identifiable subset of the general population (children, asthmatics, the elderly, and the chronically ill) that is at greater risk than the general population to the effects of air pollutants are likely to be exposed. These locations include residences, schools, playgrounds, childcare centers, retirement homes, hospitals, and medical clinics. Operation of the project is not expected to cause any localized emissions that could expose sensitive receptors to unhealthy air pollutant levels. Construction activity would generate dust and equipment exhausts on a temporary basis. There are nearby sources of air pollutant emissions, but they are not anticipated to adversely affect new residents. Impacts from project construction and existing sources of air pollution are addressed.

MITIGATION – Construction Period Emissions

WHAT: Mitigation Measure 1: Implementation of the measures recommended by BAAQMD and listed below would reduce the air quality and fugitive dust-related impacts associated with grading and new construction to a less than significant. The contractor shall implement the following Best Management Practices that are required of all projects:

1. All exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) shall be watered two times per day.

2. All haul trucks transporting soil, sand, or other loose material off-site shall be covered.
3. All visible mud or dirt track-out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.
4. All vehicle speeds on unpaved roads shall be limited to 15 mph.
5. All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible and feasible. Building pads shall be laid as soon as possible and feasible, as well, after grading unless seeding or soil binders are used.
6. Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to 5 minutes (as required by the California airborne toxics control measure Title 13, Section 2485 of California Code of Regulations [CCR]). Clear signage shall be provided for construction workers at all access points.
7. All construction equipment shall be maintained and properly tuned in accordance with manufacturer's specifications. All equipment shall be checked by a certified mechanic and determined to be running in proper condition prior to operation.
8. Post a publicly visible sign with the telephone number and person to contact at the Lead Agency regarding dust complaints. This person shall respond and take corrective action within 48 hours. The Air District's phone number shall also be visible to ensure compliance with applicable regulations.

Mitigation Measure 2: Selection of equipment during construction to minimize emissions. Such equipment selection would include the following:

1. All diesel-powered off-road equipment larger than 50 horsepower and operating on the site for more than two days continuously shall, at a minimum, meet U.S. EPA particulate matter emissions standards for Tier 2 engines or equivalent.

WHEN: These mitigations shall be incorporated into conditions of approval for the Special Development Permit (SDP) prior to its final approval by the City's Planning Commission. The conditions will become valid when the SDP is approved and prior to building permit issuance.

WHO: The developer shall be solely responsible for implementation and maintenance of these mitigation measures.

HOW: The conditions of approval will require these mitigation measures to be incorporated into the construction plans.

Further Discussion if “Less Than Significant” with or without mitigation:

35. Transportation – (No Impact) – Development proposals require preparation of a transportation impact analysis (TIA) if more than 100 new peak hour trips in either the AM (7:00AM – 9:00AM) or PM (4:00PM-6:00PM) peak hour are estimated. The Institute of Transportation Engineers (ITE) Manual is the standard reference document prescribed by the Santa Clara County Congestion Management Program TIA Guidelines for estimating trip generation from land development. These guidelines are used by all cities in Santa Clara County for determining the necessity for traffic analysis. Per the ITE Trip Generation Manual, 9th Edition (“ITE Manual”) the City’s Division of Transportation and Traffic estimates that the project will not result in 100 net new AM and PM peak hour trips. It is anticipated that the existing roadway system can accommodate the incremental increase in trips.

47. Geology and Soils - Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Safety and Noise Chapter of the Sunnyvale General Plan, www.sunnyvaleplanning.com California Plumbing, Mechanical, and Electrical Codes and Title 16 (Building) of the Sunnyvale Municipal Code Geotechnical Investigation by GeoForensics Inc., dated June 26, 2015
48. Geology and Soils - Be located on expansive soil, as defined by the current building code, creating substantial risks to life or property?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	California Plumbing, Mechanical, and Electrical Codes and Title 16 (Building) of the Sunnyvale Municipal Code Geotechnical Investigation by GeoForensics Inc., dated June 26, 2015

Further Discussion if “Less Than Significant” with or without mitigation:

43-45. Hydrology and Water Quality (No Impact) – The project site is located in the “X” flood zone (designated by the Federal Emergency Management Agency or FEMA) that is considered a moderate to low risk area with a 0.2% annual chance of flood; 1% annual chance of flood with average depths of less than one foot or with drainage areas less than one mile; and areas protected by levees with 1% annual chance of flood. Because of the project site’s location outside of a significant flood zone, the project’s flooding impacts are expected to be less than significant.

47 and 48. Geology and Soils (Less than Significant) – A Geotechnical Investigation Report was prepared by GeoForensics Inc., dated June 26, 2015. The study concluded that development of the site is feasible from a geotechnical engineering perspective. Further geotechnical investigation will be conducted prior to construction to identify potential issues with seismic hazards, compressible soils, expansive soils, existing undocumented fill materials, shoring stability and soil corrosivity. It is not expected that any significant unusual geotechnical conditions will be encountered at the site. Depending upon the results of further geotechnical analysis, the foundation for the buildings are likely to consist of mat slabs, interlocking grade beams, conventional footings, or pier and grade beam foundations. Pile driving will not be required.

Further Discussion if “Less Than Significant” with or without mitigation:

65. Hazards and Hazardous Materials (Less than Significant with Mitigation) – A Phase I Environmental Site Assessment was prepared by ENGEO Incorporated, dated October 16, 2015,15, respectively. The studies are available for review at the City of Sunnyvale’s Community Development Department, Monday through Friday between 8 a.m. and 5 p.m. The Phase I notes that the project site, prior to development, was used historically cultivated for orchards until the early 1960s. The Property currently contains one and two-story commercial buildings occupied by multiple vendors, including a former drycleaners, restaurants and a vacant lot seasonally occupied by either a pumpkin patch or a Christmas tree farm.

Based on the findings of this assessment, the following historical Recognized Environmental Condition (REC) was identified for the Property:

A former Chevron service station in the southeastern corner of the Property, at 803 W. El Camino Real had four underground fuel storage tanks (USTs) that were removed in 1989. Subsequent subsurface sampling identified significantly elevated concentrations of petroleum hydrocarbons in the area of the former tanks. Although the former Chevron facility was granted case closure by the Santa Clara Valley Water District in April 2001, significant levels of petroleum hydrocarbons remain in the subsurface. TPH-g was detected at concentrations of 350 mg/kg and 8,000 mg/kg at 30’ and 40 feet below the ground surface, respectively. No equilibrium-state soil gas data has been collected in the vicinity of the Chevron facility. It does not appear that the soil or ground after samples were analyzed for diesel- or motor-oil range petroleum hydrocarbons.

In addition, the following REC was identified for the Property:

-Soil and soil vapor remediation is currently on-going at the Camaro Cleaners located at the 505 S. Pastoria Avenue. Dry cleaning operations using tetrachloroethene (PCE) were conducted at the Property from at least 1998 through 2005. Subsequent investigations conducted in 2005, 2006, and 2008 found elevated PCE concentrations in soil and soil vapor at the drycleaners and beneath an adjacent unit. Additional sampling confirmed that groundwater at the Property had not been impacted.

A sub-slab soil vapor venting system was installed in 2010. Annual operational reports prepared by SVC Environmental Inc., have noted reductions in PCE concentrations; however, these concentration continue to remain above the Regional Water Board’s Environmental Screening Level (ESL) for commercial/industrial land use.

In 2013, a site mitigation plan consisting of the excavation of impacted soil was approved by the RWQCB. In 2014, soil characterization fieldwork, including the advancement of six soil borings, was conducted subsequent to the removal of the dry cleaning equipment. Review of the laboratory results suggests that PCE-impacted soil appears to be shallower than anticipated in the SMP prepared for the Property. Re-evaluation of the soil beneath the former dry cleaning equipment has found that the PCE contamination is generally limited to the upper 5 to 6 feet of soil. The highest concentrations of PCE

were detected along the northern portion of the site. This is the area where elevated concentrations of PCE were previously detected (S1) at 5 feet and 10 feet below ground surface that exceeded the ESLs.

MITIGATIONS – Hazards and Hazardous Materials

WHAT:

- (1) Given the subsurface conditions as reported at the time of case closure of the former Chevron facility, a soil gas sampling program shall be completed in this location.
- (2) Given the historical agricultural use of the Property, it is conceivable that organochlorine pesticides may have been stored or used. Soil sampling with laboratory testing shall be undertaken to check that the near surface soil has not been impacted by past agricultural use.
- (3) Given the age of the structure on the Property, it is possible that asbestos-containing materials or lead-based paint materials are present. An environmental professional shall be retained to check for asbestos-containing materials and/or lead-based paint.
- (4) The PCE-impacted soil should be excavated in accordance with the SMP prepared for the Property. Within the Soil Characterization Report prepared in 2014, ENGEO defined the lateral extent of the PCE-impacted soil and anticipates that these limits would need to be excavated to a depth of 5 to 6 feet below the ground surface for off-site disposal. With regard to the soil in the area of the 2006 boring S1, we recommend that at the time of soil excavation this area be trenched or 'pot-holed' to extend to at least 10 feet below the ground surface.

Review of the laboratory test results suggests that the soil impacts tend to be near the ground surface. Consequently, as the excavation of the impacted soil will likely extend to the south under the donut shop where the contamination is anticipated, we recommend that excavation sidewall samples be collected. Laboratory testing of the soil could provide additional information with regard to the depth of soil excavation anticipated along the drain line extending under the donut shop.

We recommend that an environmental technician be on site at the time of the soil excavation to observe and monitor the soil removal. A PID should be used to monitor the soil vapors as the excavation proceeds to check for significant variations in the air and as a health and safety check. Soil samples should be collected from the base and sidewalls of the excavation for laboratory testing to confirm that impacted soil exceeding the residential ESLs has been removed.

- (5) Further, with respect to the proposed remedial activity, the proposed excavation beneath the dry cleaners, will require the destruction and removal of a significant portion of the floor slabs within the dry cleaner suite and potentially the donut shop. Prior to the commencement of slab removal activities, perform a review of the foundation elements to confirm that such activities will not undermine the structural integrity of the foundation or the structure as a whole.

WHEN: These mitigations shall be incorporated into conditions of approval for the Special Development Permit (SDP) prior to its final approval by the City's Planning Commission. The conditions will become valid when the SDP is approved and prior to building permit issuance.

WHO: The property owner shall be solely responsible for implementation and maintenance of these mitigation measures.

HOW: The conditions of approval will require these mitigation measures to be incorporated into the construction plans.
