ART PROGRAM: SITE MAP

ETIENNE VIARD

Since 1990, artist Etienne Viard has created sculptures in Corten steel, a strong metal that beautifully matures over time in the outdoors. The choice of steel is a challenge: from an inert material, heavy and cold, to interpret his poetic vision of nature. Throughout Pathline Park, Viard's works are designed to enhance the public space experiences. Each sculpture, aged by the elements, changes with daylight, weather, and time, provoking new observations and thoughts each time they are viewed.
